My question about the CE-232 is how intrusive is it? Is there any cutting
or drilling? Can the interface be removed and the scanner restored to
original?

Honest question, honest answers only please. I do not care to get into
the middle of this discussion.

Thank You,

Ron

Environment Canada uses these broadcasts since many years.

The people that run Dataradio are those that demonstrated packet radio in Montreal at a MARC meeting in the 70's. That was before AX25 and TAPR. I still remember that historic evening like it was yesterday.

I have a Pro-2035 and am considering the purchase of a Optiscan 535 and Scanstar software. What benefits will these provide me as I really am new to this hobby and have no contact with this item nor scanners controlled thru the computer. If you have first hand experience with these items please share your knowledge with me as I know only the little I've read in the most recent mags.

Also am considering the MFJ-784 DSP filter, again anyone have any details or knowledge of this product. Is it worth the price and is it effective in reducing noise on weak signals?

Thanks for any info you can share.

D Stark (dstark@eznet.net) wrote:

: Gee, Andy, if you weren't in such a hurry to blast
: something related to Bill Cheek, you might have read the
: entire message.

David, I just think your perturbed at me because I have a bigger mouth
than you. 8-D

This group is pretty much a "Cheek Free Zone" anyway. You may not agree
with some things I say and I welcome you to correct me when I'm wrong.
I say a lot of things on here and I see more charater assasination
attemps at me than I do valid arguments or corrections.

: See the part quoted above that says "it will not work
: on a PRO-2004"?

Geeze, I missed that part! Well, anyone who currently owns a 2004
and is looking to advance their capabilities should do the following
by my reckoning. Get rid of the 2004 and upgrade to a 2006 and the Opto
456 at the very minimum. It's no secret the 2006 is a better receiver.
It also no secret that Tandy, Icom, AOR, Uniden, Standard and Yupituru now
have radios that will simply blow it out of the water.

Just like computers rapidly become out-dated so do scanning receivers.
Case in point. Say you had a good friend who has an XT. Your friend
finally realized that he would have to be able to run a GUI to take
advantage of all the new softare coming out. Would you recommend that he
upgrade to a 386SX16 running Windows 3.0 or would you tell him to go up a
couple of more notches and settle for nothing less than a 486DX266 with
Windows95?

Now which system to you think has more future? I thought so.

The days of the PRO-2004,5,6 & HB-232 are going, going, gone.
I know it, you know it and Butt Cheek knows it too.

: Evidently you don't much care what people think of your
: opinions, so I won't bother commenting further.

People tell me what they think of my opinion in Email. The truth would
probably blow your mind.

Have a wonderful day, David!

Cheers!

Andy

AT&T has had digital encrypted models around for awhile, plus
there are the spread spectrum models. Either one would take
quite a bit of effort for someone to decypher.

With the spread spectrum phone, your signal wouldn't even
show up on most radio equipment.

Jim, despite your vigorous patrolling of the Net in search of prices that you find objectionable, you are flat out wrong about what this package is worth. I have been gathering pricing data for several months and this scanner is regularly selling at an average of $400. With the added accessories, $500 is not an unreasonable price to ask.

Your pricing is a reflection of your personal distate for this particular Icom and utterly unfounded in reality. If your judgement is so clouded by bias, then you're not doing anyone much good with your "analysis."

In article ,

If by "public domain" POCSAG decoder, you mean PD v.1.02, the PD stands
for "POCSAG Decoder", not public domain. It's Peter's shareware version of
the registered program.
The docs do say it works better with a discriminator output, too.
Message Tracker works with my PRO-43's headphone out very well, at a cost
($180US).
Bill

SB SAREX @ AMSAT $STS-74.006
STS-74 Eastern R/S Times 11/17

Below are the rise and set times for STS-74/MIR for selected US cities
over the next day. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your local
PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer

set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

These predictions were generated from MIR element set 356 and are valid for the time period when the shuttle is docked with MIR. Undocking is scheduled to occur Saturday morning. Because of the frequent maneuvers that were conducted during the rendezvous phase of the STS-74 mission, it was not practicable to generate rise and set bulletins before the MIR docking. There are no scheduled SAREX school contacts during the docked portion of the mission, but the STS-74 crew members have been granted permission from the Russian government to operate the ham equipment on MIR, therefore it might be productive to listen for them as Atlantis/MIR passes overhead. The ham station on MIR operates on 145.55 simplex, the Sarex equipment on Atlantis will operate on a 145.84 downlink and will listen on 144.45 and 144.47, check both downlink frequencies as Atlantis/MIR passes overhead. The crew sleep period is from approximately 19:00 UTC to 03:00 UTC each day.

Users are reminded that these prediction bulletins are generated to assist new hams and others who have no prior experience tracking space shuttle missions. Anyone seriously interested in space shuttle missions is encouraged to obtain their own tracking software. Many different programs are available over the internet, or by calling Amsat headquarters at 301-589-6062.

SB SAREX @ AMSAT $STS-74.008
STS-74 Western R/S Times 11/17

Below are the rise and set times for STS-74/MIR for selected US cities
over the next day. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your local
PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer

set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

These predictions were generated from MIR element set 356 and are valid for the time period when the shuttle is docked with MIR. Undocking is scheduled to occur Saturday morning. Because of the frequent maneuvers that were conducted during the rendezvous phase of the STS-74 mission, it was not practicable to generate rise and set bulletins before the MIR docking. There are no scheduled SAREX school contacts during the docked portion of the mission, but the STS-74 crew members have been granted permission from the Russian government to operate the ham equipment on MIR, therefore it might be productive to listen for them as Atlantis/MIR passes overhead. The ham station on MIR operates on 145.55 simplex, the Sarex equipment on Atlantis will operate on a 145.84 downlink and will listen on 144.45 and 144.47, check both downlink frequencies as Atlantis/MIR passes overhead. The crew sleep period is from approximately 19:00 UTC to 03:00 UTC each day.

Users are reminded that these prediction bulletins are generated to assist new hams and others who have no prior experience tracking space shuttle missions. Anyone seriously interested in space shuttle missions is encouraged to obtain their own tracking software. Many different programs are available over the internet, or by calling Amsat headquarters at 301-589-6062.

2050. ACARS - What will I see?

Newsgroup: rec.radio.scanner
Date: 1995-11-18 00:00:00 UTC
From: joe@microserve.com
Message-ID: <48lrfa$889@crash.microserve.net>
Source record: 246236

I saw an ad recently from AEA regarding software that will decode ACARS transmissions. Since I already have the PK-900 demodulator, I'm wondering what sort of things are transmitted
through ACARS. I've tuned to 131.55 and heard various digital signals, and my house is pretty
close to a jet airway.

Can anyone give me a synopsis of the kind of stuff I'll see with an ACARS decoder. It'll help
me make a decision about purchasing the software.

Thanks!

Joe Stepansky, KQ3F

Ahhh... but does it come with spread spectrum? If I'm not mistaken,
it only has something like 1 million digital codes. People can still
hear you using scanner?

Do you remember the key combination? I had one of these about a year ago,
but I forget it and can't seem to remember the FTP site where I'd
originally found the modification.

I was wondering which antenna is better the Radio Shack Cellular look-alike scanner antenna or the mag mount all band scanner antenna. Or if you can recommend a better antenna please let me know. I only want to spend at most $50 for a mobile antenna. I have heard about antennas that replace your existing AM/FM antenna and have connectors for AM/FM and BNC for the scanner, if you have any information like performance and what company makes them please let me know. Thanks in advance. Please e-mail slee@netcom.com if possible.

Sign onto MIT's (Macintosh archive) site:

http://hyperarchive.lcs.mit.edu/HyperArchive.html

...and search for AR8000 Toolkit 1.0.1. Designed for the Macintosh, it
will control all features of the 8000, including restoration of blocked
cellular.

I'm thinking about getting an AR8000 scanner, but have been unable to find a local source. Can anyone recommend a good mail order source in the U.S.?

I've visited the Javiation Web page and they look like a good supplier, but I'm concerned about potential problems importing the scanner to the U.S. If anyone has experience with this I'd like to hear from you. Were there any import taxes? Any problems with customs? Was the net cost comparable to buying from a domestic source?

BILL FUNK (bill.funk@iotp.com) wrote:

: Well, according to the ARRL (and I'll take their word for it over Andy's), a
: TV antenna (otherwise known as a Log Periodic Dipole Array, or LPDA for
: short) exhibits a gain of about 4.9 over a similarly-positioned half-wave
: dipole.

Bill, I can't believe that this topic is still going on. Once again,
you've missed the point I was trying to make WAY back when.

I stated that a TV antenna has no reliable gain when used as a scanning
antenna for public service frequencies. NOT TV frequencies. I recall
advocating the use of antennas specifically engineered for the task.

I'm getting very tired of this nonsense.

: No, it's not. It's specifically because so many antenna makers use
: non-standard methods to measure gain.
: For example, one might say their antenna offers X gain, while another maker,
: with the same design, claims X+2 gain. Same design, differnt claims. Why?
: Because one compares to an isotropic dipole (which is very rare in reality),
: and the other to a real-world dipole.

An isotropic radiator is very rare indeed. It doesn't exist.

My point was that gain claims are disallowed to protect the ignorant
buyer.

: Just like, here in the US, horsepower figures are not allowed to be given
: for cars, in ads.
: Instead, the HP figures are given for engines (The Super Belchfire XCL has a
: 1.4 bushell, turbo-inflated, double-overhead corncob engine with 285
: Horsepower, while the Namby-Pamby Double-Ply 120 has a 4 quart, single
: rotor, perfume-fed engine with 12 HP.) Since the engines are all rated on an
: engine dyno, the comparisons are valid.
: Antennas are not so rated, so claims vary greatly.

You forgot to talk about net and gross horsepower. <G>

Cheers!

From: Cliff Gross <grossc@accessnv.com>
Message-ID: <48jibg$3ap@bighorn.accessnv.com>
Source record: 246308

Does anyone have a listing of the Las Vegas PD 4XX Police codes. Some are easy to figure out by listening for awhile, others are more difficult and not used much. Yeah I know I could probably go buy a Rad Shack Police Call and they're probably listed there, but most of their freqs are for other states and I can't see buying one just for that (I have most LV police and fire freqs already). Thanks in advance.

From: andyc@opus.freenet.vancouver.bc.ca
Message-ID: <48kdc6$e3q@milo.freenet.vancouver.bc.ca>
Source record: 246311

Hi. I was wondering if it is possible to replace the usual 3.6v cordless phone battery with usual ni-cad AA or AAA batteries? The reason I'm asking is that most simple ni-cad rechargeable batteries do have "memory" effects, where if you charge them before they're used up, you could reduce their life cycles. And cordless phones seem to be charging all the time when you replace the headset back on the base unit.

Don't cordless phone batteries have this "memory" effects too or they are special?

No, it won't.
A frequency counter is what's called a 'near field' receiver. That means
it has to be real close to a transmitting antenna. How close? That depends
on how strong the signal is, but it's usually "real close". For a cordless
phone, for example, the two antennas have to be just about touching. For
that security guard, maybe a few feet, max. For an FM Broadcast antenna,
maybe a hundred yards.
They really aren't a 'magic wand' that will be like a scanner in reverse;
it simply will not tell you the frequency of a signal you want to hear,
unless it can pick that signal out from *all other signals* it hears.
Good luck.
Bill

PD102 is a shareware program designed to decode POCSAG pager signals. I'm
able to get the registered program for you, if you want it.
PD has some design parameters that make it not really suitable for US use,
yet. It's being upgraded as we type. It's made by a person in the UK.
It will decode POCSAG only, and only at 512 or 1200 baud. No GOLAY,
nothing over 1200 baud. Here in Phoenix, that just doesn't cut it.
Message Tracker is a much better (and more expensive) alternative. It does
all the PD program does, plus GOLAY, and 2400 baud auto detection. The
drawback is the cost: I paid $180US for the middle version.
You can get more info on MT at:
KLTsupport@aol.com
Hope this helps.
Bill

>Get the mag mount. No Contest.

Definitely the Magnetic mount. I've been using mine for over 10 years now and
even had to rebuild it when the coax broke out of it. I also use a cellular
lookalike inductance (Mounted on glass) type of antenna hooked on the same coax
using a splitter to add the extra higher frequenciy coverage.

Can a simple cordless phone be modified for added security? How about simple speech inversion, one that produces donald duck effects?

In the handset, there is this wire that connects to the antenna: can one add some simple inversion circuit between this wire and the antenna? But how about the base unit?

Just a quick thought... :)

It is much cheaper to buy a cordless phone with a speech inversion, rather than to modify aphone, because a speech inversion unit costs around $80 from Ramsey Electronic plus combersum wiring it to the phone, while a cordless phone with speech inversion is around $90 check with your local Radio Shack.

I have the Ce-232, and it's a great tool. But unless the software has
been revised (I don't think so) the text editor is not built in. You
"shell" out to a shareware text editor he throws in. (Course you
still have to register it).

Also available are two user-definable "tool" menu selections. This means that you can specify up to two utilities of your own to be used with the CE-232 program!

One of the most used functions in mine is scripting. You can select from a varity of avalable scripts or write your own.

A simple script I use regularly starts and stops a tape recorder whenever _specific_ channels are active. Record only selected channels while scanning the full 400, or whatever you select.

Monitor several repeater input channels and switch to the output channel when a mobile is near your location. (great for high traffic citywide channels)

These are a few of the abilities of the '232, you Will find others...

Good Signals... LCM

Nah... Just that you have a big mouth that's all.

>This group is pretty much a "Cheek Free Zone" anyway. You may not agree
>with some things I say and I welcome you to correct me when I'm wrong.
>I say a lot of things on here and I see more charater assasination
>attemps at me than I do valid arguments or corrections.

Actually I think Bill is being pretty good about ignoring you and
that's why there hasn't been much from him. As for the `rightness' or
`wrongness' part... Since I haven't seen all that much from you
except for you your `blasts' at anything related to Bill I can't
tell either way. On the character assasination... I think *you* have
been doing *a lot more* of that than anyone else and it's high time
that you quit looking out of your navel thinking you are watching TV.

>: See the part quoted above that says "it will not work
>: on a PRO-2004"?

>Geeze, I missed that part! Well, anyone who currently owns a 2004

>It also no secret that Tandy, Icom, AOR, Uniden, Standard and Yupituru now
>have radios that will simply blow it out of the water.

Hmmmmm... How many scanners *do* you have? What makes *you*
the authority on whether or not a 2004 isn't a `good' radio? (I've
got about 30 different scanners ranging from a pair of 2004s up
through a pair of 2006s along with most of the AOR line and 6 or 7
Regency/Bearcat/Unidens plus several other brands that you've probably
never heard of. {CHORTLE!}) There are uses for just about *every*
scanner whether it's `bleeding edge' `state of the art' or a so called
`antique'. (BTW, there are a couple of agencies out this way that the
only radios that can cope with their systems *are* the 2004s! {BSE
GRIN!} The `newer?' radios can't get by their `anti-scan' features.)

>Just like computers rapidly become out-dated so do scanning receivers.
>Case in point. Say you had a good friend who has an XT. Your friend
>finally realized that he would have to be able to run a GUI to take
>advantage of all the new softare coming out. Would you recommend that he
>upgrade to a 386SX16 running Windows 3.0 or would you tell him to go up a
>couple of more notches and settle for nothing less than a 486DX266 with
>Windows95?

As `cute' as the above `argument' sounds what the heck does it
have to do with scanners? Remember... I said above that there are
uses for just about any scanner and a lot of them *don't* require
`bleeding edge' "Tech-no-golly" to accomplish. (Lessee... *I* use an
XT for my X10 controlled stuff, a 286 AT for handling a lot of my
scanner and SWL logging, a 386DX40 for my BBS, a 386DX40 for my
OptoScan, and a 486DX2/66 for my server for the LAN that ties
everything together. Then there are the S-100 bus machines and some
of the other *real* `antiques' that are scattered around the farm
controlling various `processes'.)

>Now which system to you think has more future? I thought so.

Only if you like being on the `bleeding edge' all the time.
{CHORTLE!}

>The days of the PRO-2004,5,6 & HB-232 are going, going, gone.
>I know it, you know it and Butt Cheek knows it too.
^^^^^^^^
There you go *again*! *You* `complain' about character
assasination and then you go right ahead and do it yourself! Talk
about being a hypocrite! Why don't *you* quit and then just maybe you
won't get all the H&D that you apparently don't like? (Besides...
Then there just might be a little more `info' and a lot less `BS'
floating around the `Nets' because of it. {GRIM GRIN!})

>: Evidently you don't much care what people think of your
>: opinions, so I won't bother commenting further.

>People tell me what they think of my opinion in Email. The truth would
>probably blow your mind.

Nah! It'd take a lot more than the `stroke Andy club' to `blow
my mind! Besides... I seem to recall that you send most of your
`mail' to DEV=NUL so it must an awfully small collection/group.

>Have a wonderful day, David!

I'm sure he will!

Doleo ergo sum,

Ed..

Most radios that require 9 volts can even handle 12 continuous (at least that's been my experience and won't actually recommend that to anyone) The 9.6 volt charger/adapter will work just fine. I use one one several of my hand-held RS scanners.

Funny...
On *my* Radio Shack discone antenna, the radials were all threaded, and
threaded into the main body without any screws being needed.
I guess that's why my RS discone has lasted as long as it has. All you
complainers got the wrong one.
Of course, Radio Shack only sells one discone, so I wonder why yours is
different from mine?

MG> off...Could you explain it in laymens terms?

I wish my wife would buy *me* a scanner...
Anyway, if you don't know what a CTCSS board does, you obviously don't need one! ;-)
CTCSS is Continuous Tone Coded Squelch System.
Here's a layman's description (I'm not ordained, so this comes from a layman...):
In today's crowded RF spectrum, it is sometimes good to share a frequency with someone else. So, someone sets up a repeater, and sells time on that repeater to people who want to use that repeater, sharing time with others, in an attempt to cut costs. So far, so good.
Until Joe's Bakery finds that keeping an ear to the radio to hear his drivers is hard to do because the office supply house drivers call in all the time, and Joe has a hard time keeping the drivers straight.
CTCSS comes to the rescue!! Joe's radios are programmed to open squelch only when a certain tone is transmitted. The office supply store's radios are programmed to open squelch when a *different* tone is transmitted. These tones are transmitted for the duration of the transmittion, and are too low to be processed by the radios' audio amps (they are called 'sub-audible' for this reason).
Using CTCSS, a single repeater can handle many customers. Each radio also 'listens', and will not transmit if another radio is accessing the system (it can tell by hearing the other tones, even it won't break squelch for them).
In your scanner, such a repeater system will have many, unrelated transmissions on the same frequency (or set of frequencies, in the case of a trunked system). A CTCSS board will allow you to receive only those transmissions that use the tone you program into it, for (usually) any one frequency.
Does this help?

MM> recieve such freqs? Any help would be appreciated -Mark

Well, Mark, just watching here for a few days would have answered all of
your questions.
When you ask about "mods", do you mean the cellular restoration mod, as most
seem to, or another mod? If it's the cell mod, why not come out and say so?
No scanners "require" any mods.
After April, 1994, scanners capable of tuning the cell bands couldn't be
imported or made here.
There are several cell-capable scanners offered here each week. Just look
for them, and note the asking price.

AM> I stated that a TV antenna has no reliable gain when used as a scanning
AM> antenna for public service frequencies. NOT TV frequencies. I recall
AM> advocating the use of antennas specifically engineered for the task.

No, I didn't miss the point at all. *You* did. TV antennas are very
broad-band antennas. If you really knew as much about antennas as you say
you do, you'd know that. But you don't.

AM> I'm getting very tired of this nonsense.

So, why do you respond? You continually say you dopn't want to do this, but
you keep it up as though you do. Should we listen to what you say, or
observe what you do?

AM> : No, it's not. It's specifically because so many antenna makers use
AM> : non-standard methods to measure gain.
AM> : For example, one might say their antenna offers X gain, while
AM> another maker, : with the same design, claims X+2 gain. Same design,
AM> differnt claims. Why? : Because one compares to an isotropic dipole
AM> (which is very rare in reality), : and the other to a real-world
AM> dipole.

AM> An isotropic radiator is very rare indeed. It doesn't exist.

Another example of how little you know.
An isotropic antenna is theory, and, as a theory, is repeatable with very
specific qualities. Any person who knows anything about antennas would know
this, but you have again demonstrated your ignorance about antennas.

AM> My point was that gain claims are disallowed to protect the ignorant
AM> buyer.

AM> : Just like, here in the US, horsepower figures are not allowed to be
AM> given : for cars, in ads.
AM> : Instead, the HP figures are given for engines (The Super Belchfire
AM> XCL has a : 1.4 bushell, turbo-inflated, double-overhead corncob
AM> engine with 285 : Horsepower, while the Namby-Pamby Double-Ply 120 has
AM> a 4 quart, single : rotor, perfume-fed engine with 12 HP.) Since the
AM> engines are all rated on an : engine dyno, the comparisons are valid.
AM> : Antennas are not so rated, so claims vary greatly.

AM> You forgot to talk about net and gross horsepower. <G>

You forgot to talk about anything you know about.
Before you attack what *I* forgot to talk about, you really ought to see who you are talking about. I have *forgotten* more about auto mechanics that you have ever known about auto mechanics.
I wonder just what grade in high school you are really in.
If you want to run with the big boys, you need to show a whole lot more than you have so far. Your disjointed ramblings about Bill Cheek have done nothing to convince anyone hwere that you know what you are talking about.
And, I really don't want to hear what people say to you in "email", about how right you are. So far, all I've seen here in public is people telling you how stupid and infantile your are.
Come to think of it, anyone who likes what you post would *have* to do it in private; they certainly don't want anyone else knowing about it.

AM> Cheers!

RB> interesting, or just endless telephone numbers? Any opinon
RB> would be greatly appreciated, as I am thinking of buying one
RB> of the decoders.

Pagers are like anything else: you may like it, you may not.
What's on pagers? A *lot* of phone numbers, for sure. Most pagers are digital, numeric pagers, and all they will show is numbers. Many people make up codes to go with the numbers (555 1211 911; the 911 means "call NOW!"). Alphanumeric pagers will allow the user to see actual typed messages. These can range from simple phone numbers to extremely interesting, even explicit, messages (we are talking XXX rated, here!). Like most other things, the really interesting messages are relatively rare.
Most people who use such software have a reason to do so. For example, maybe a company wants to keep track of their outgoing pages, so Bob the Shirker can't say he didn't get the page.
Hope this helps.

MN> Anybody know just how "high" it will go???

You have stumbled onto something that many people never know about: the published specs are usually "nominal" or guaranteed. Many units greatly exceed the specs, as the unit is usually designed to be a little better than the specs, so that a huge number of them will pass, even if quality control is kept relatively loose.
In the case of a frerquency counter the frequency range that's listed is almost always exceeded by the unit in question.
While I don't know how high your unit will go, I've measured mine at over 2 GHz. about a year ago. In the 440 band, it usually spot on.

>
> Try 2-9-Band Then while display is filling up 2-9-L/OUT
>
>==========

Try this: (1) First try hold LOCK-OUT, 2 and 9 keys down while turning on
power. Test frequencies should be loaded into the first 25 channels (maybe) .
If channel 23 contains a magic frequency then you can direct search .
****

(2) IF that does NOT work (THIS WILL !!!!!) hold down BAND, 2 and 9 down
while turning ON power. Now, in the digit test mode, all digits of the LCD will
move slowly from the left to the right of the display.

(3) When the movement advances nearly to the right end of the display, press
and hold the LOCK-OUT, 2 and 9 keys until the digit test mode stops...
The display will blink, NOW the radio will begin scanning the factory-preset
frequencies. Manually step to channel 23, which will display 888.960 MHz, roughly
the middle of the cellular band. Start a normal, direct search routine from this frequency
to
cover the cellular freq's.

(NOTE) This will wipe out all stored frequencies. You will want to keep CH #23
open , so you can do your searches up or down from 888.960. Once you search higher than
896.000,
or lower than 869.000 , you will need to manually step to CH # 23 again. (once you search
past those ranges you need to go back to the middle by going to ch. 23)

After you get the mod complete it is safe to program the scanner back to
wherever you had it, just keep ch. 23 open for cell.

Hope this was not too confusing. HAPPY SCANNING!! |-))))))))))

What would you reccommend for a first (and most likely only) scanner? I'd
probably want a mobile model, not a stationary one, and be spending up to
$300. Preferably continuous coverage, or 800Mhz at least.

I checked in at Radio Shack for early model PRO-51's and not only was told
that they've been pulled but got a dirty look from the manager, too.

I have noticed a few dj's in the clubs using wireless mics; also a few clubs where staff members use two-way radios. Does anyone happen to know any frequencies for Toronto or Niagara Falls clubs? Let's exchange frequencies.

Also, I would like to know which clubs you have been to where you have noticed some obvious radio-activity, whether or not you have the actual frequencies. I will attempt to hunt some of them down to exchange with others.

So far I have seen wireless mic's in use at Million Dollar Saloon in Mississauga and bouncers using what looks like uhf-band two-way radios at the Sundowner in Niagara Falls. So there's some huntin' ground for ya if you've got nothing to do some day!

It depends on how you choose to install it. I chose to install it in an external box, actually inside an AB switch box for DB9s. The PRO 2006 plugs into A, and the PRO34 into B. Inside the PRO 2006 you will have to make several solder connections. A buffer board should be installed inside the 2006 if the CE-232 is external. I used pin-line connectors so I can remove the buffer board easily.

Warren,

I used to live in Hunterdon County. Tell me what you want to listen to.
Everything is countywide in Hunterdon, which makes listening easy. Here's
a starter Hunterdon list...

154.785 North police dispatch f-2
154.815 South police dispatch f-3
154.965 police/EMS/prosecutor tactical (f-1 repeater/f-4 simplex)
155.205 EMS dispatch
155.340 EMS to HMC
155.220 Flemington-Raritan Rescue
155.730 Sheriff
33.74 Fire dispatch
33.68 Fire fireground primary
33.58 Fire fireground
33.62 Fire fireground
151.070 Roads
151.235 Parks

Holler if you need anything else.

Maybe they do have memory. I have a Sanyo cordless that has a 3.5V which I had replaced recently because it only takes them hours off the base and gives a low battery signal. The new ones work fine, like new. If you think yours has the same thing and would not like to charge everytime it's in base, I suggest you put a tape over the recharging site so it won't charge all the time then remove it only when you want it to be charged.

I don't think you would like to have AAA attached to your phone. It can't fit in the battery case.

> i'd hate to not know just why that air unit is over our shop !!!
>Randy

I too have been following this thread until I could obtain some truth
about all this before saying anything.

The truth is LAPD is *NOT* switching to 800MHz. LAFD is already on 800
and all other city related services (dog catcher, traffic lights, etc)
will switch to the Ericsson 800 MHz trunked system.

Regarding LAPD trunking UHF-T... that *might* happen, but it will not
happen on dispatch frequencies. If it does happen, it will happen on
Tac/Citywide type channels that are not keyed down continuously like
dispatch usually is on Friday/Saturday night.

For those who care, here are some other misc ramblings :

- The important goal at the moment is to start using the new 48x/50x
frequencies they were given a few years ago. Right now they have *none*
of the new ones tied into dispatch. Only a couple are in use due to
stand-alone repeaters they've put up to convince the FCC they are busy.
- In the interim, LAPD is building their own MODAT decoders in a attempt
to start using these frequencies. Motorola no longer supports or builds
MODAT equipment.
- LAPD's goal is to have every officer with his/her own Rover. Right now,
the main attention is getting everyone a Astro.
- BTW, the only reason the new Astros even support MODAT is because LAPD
insisted they (Motorola) put it in, otherwise the Astros would be useless.
- Old MX-350 Rovers are being permanently left in Convertacoms so the
officers no longer need to remove their radios each time they enter/leave
the car.
- After every officer has his/her own Astro, LAPD will attempt to switch
from MODAT to MDC-1200
- When this occurs, it is unknown if LAPD will install Astro vehicle adapters
or get mobile units that support MDC-1200. Initially, officers thrashed

the AVA's since they are not built as well as the Convertacoms.
- As the Digicom MDT-800s in the cars breakdown, they will be replaced with MDT-850 models that combine the RF module and Logic/Decode module in the same housing as the display/keyboard. The protocol remains the same.
- If MDTs are upgraded, they are second in line compared to voice comms upgrades. Although all calls go out on MDT, the possibility of losing the unused 48x/50x freqs back to the FCC is more important.

Regarding LA City Ericsson :
- The base equipment is in but the system is not fully debugged yet. LA City has a contract with Ericsson to install the system and it is not fully operational at the moment. A majority of the microwave, voters and transmitters are installed but only a dozen or so handhelds have been given out to test the system.

LAPD employs 125-140 techs scattered across the city working within each division. The techs stationed at each division are specialized in a what they work on. There are techs for Astros only, mobiles only, base only, etc. These techs have nothing to do with LAFD or the Ericsson system.

In LAPD, each system related to dispatch is broken down into fairly small groups. There are groups that only deal with the CAD (Comp Aid Dispatch) system. Also there are separate groups for the hill top radio maintanence, microwave links, and audio switching/routing/recording at dispatch center.

Unfortunately, all this means things move very slowly at LA City and ideas are slow to implement. However, you can be sure that the investment LAPD has put into the Astros and the FCC licensing for the other 48x/50x freqs means that it is very, very unlikely LAPD will be leaving UHF anytime soon.

- Cliff

2118. Re: AR8000 to Scout interface problems

Where can you point me for a definitive listing of the features
of the various programs for controlling a scanner with a computer?

I see scanty ads with lots of !!! and telling me it's the best, offhand
remarks on the newsgroups, but nowhere have I found a concise
listing of exactly what each program does. That's the only way
I can make a useful decision, and I am very close to needing
to make that decision.

Any pointers or your own descriptive list of features is welcome.
Might as well post, so that everyone can chime in with
constructive additions.

Thanx!

Okay, I have had my counter for about 1 year now. I use it with which ever
antenna is handy at the time. The reception with a small -db gain antenna
isn't all to hot though (I usually just use my scanner rubber duckie). I have
picked up freqs from 1 watt VHF transmitter at over 50 yards before with
little trouble, however you pratically have to have the counter inches from a
TX with very low power output. ie: To get my cordless phone freq, I have to
have the antennas almost touching, and about 5 feet for my handheld cellular.
There is a GREAT mod for this RF counter that was posted in the newsgroups a
few weeks back. Its a hold button (allows you to -pause- the display). I
don't recall who posted this mod.
**** Basicly you just put a momentary or toggle switch in line between
jumper pad TP17 and ground with a 1K ohm resistor on one end. TP17 is on the
display side of the ICU a few mm's from the lower right hand corner of the
CPU. ****
I did this mod and it works great. However its not "my" mod, and I can't
recall who origanlly posted it. But there it is, of course the standard
disclaimer goes with the mod (If you break something, its not my fault,
etc...) Its a good little device for the $$$$

Your best bet is to get a antenna made for your scanner. Even a cheap one might be better than using a shelf. Also, the direct connection to a device that was not meant to be an antenna will casue some problems, like decreased range. Any MODs that you could do to your scanner would not be worth the price of replacing the anetenna

The Radio Shack Frequency Counter has published freq ranges of 1mhz
to 1300mhz.

NOT TRUE!

I tested it with my TV News Microwave transmitter and guess what....

It read 2102.00mhz

That's the center freq for 2ghz microwave ch-7 (TV Live Trucks)

So it "reads much higher then the "published" specs!

Anybody know just how "high" it will go???

It's on sale because it doesn't work very well and they are going to discontinue it.

I have several RatShack items, mostly purchased on sale for similar reasons. At the sale price, they are sometimes worth it, if you have a particular use for it.

Their DSP unit for instance works great on CW but ain't worth a damn on SSB.

I have an "as new" PRO-60 with AC adapter.
This unit looks brand new. No scratches.
(no manual/box).

Rated as a top Radio Shack scanner. 200 channels. Triple conversion.
29-999.9 Mhz (minus the cell gaps). Very fast, very quiet very sensitive.
Sells new list for $379 and when on sale sells for $299.

I will ship 2-day-delivery anywhere in lower 48 for $160 plus $10 for
shipping.

The AR8000 Toolkit works great, is Mac native, and is available in a demo version for you to check out. I don't have a URL for you, but version 1.1 was just uploaded to the InfoMac archives a week ago. AR8000 Toolkit is also available in the HamNet Forum on CompuServe, and is probably in ZDNet and AOL and the rest by now.

This is all spelled out in the book "Police Call", available
at most stores that sell scanners in the Los Angeles area.
I'm afraid that it is a bit much to type in, plus you still
wouldn't have the maps.

For your example, 6-Adam-38, area 6 is Hollywood, Adam is a
2-officer patrol car, and 39 is the unit number.

>recall who origanlly posted it. But there it is, of course the standard
>disclaimer goes with the mod (If you break something, its not my fault,
>etc...) Its a good little device for the $$$$

Ok this leads me to my next question. Are there any good ways to improve the performance of the counter? (meaning range) I can think of two things Using an antenna that corresponds to the frequency you are looking for (mentioned in a previous post), and possibly an rf amplifier with a filter that will only allow the range of frequencies you are interested in to come through. (To filter out noise).

Are there any others, and are these two sound?

Thank you,

Jeff Thompson

Message-ID: <48p06k$1mg8@usenetw1.news.prodigy.com>
Source record: 246199

A friend of mine owns a Radio Shack dealer store and replaces a LOT of cordless batteries, and there does seem to be evidence that the memory effect works on these. The ones that are left charging and only taken off the base when in use seem to have a battery life of less than 24 months, while it's not unusual to find ones that were run down regularly that lasted over four years.

BTW- all that's in a cordless pack is a few nicads wired together to produce the desired voltage.

-
JAMES DEAN KD4USF NCZN58B@prodigy.com
Yes that's really my name.

JA>Organization: Netvoyage Internet Access Provider

JA>I'm thinking about getting an AR8000 scanner, but have been unable to find a
JA>local source. Can anyone recommend a good mail order source in the U.S.?

JA>I've visited the Javiation Web page and they look like a good supplier, but
JA>I'm concerned about potential problems importing the scanner to the U.S. If
JA>anyone has experience with this I'd like to hear from you. Were there any
JA>import taxes? Any problems with customs? Was the net cost comparable to
JA>buying from a domestic source?

JA> -- Jay

I know several people who have bought AR8Ks from Javiation. The wall
cube is 220V and needs to be replaced by a $10 Mouser wall cube. Customs
of around $30 must be paid to UPS. The price depends on the $/# ratio,
which is stated on your credit card when the transaction clears. The
Javiation price is pretty good, much better than the Canadian price, and
ends up close to US mail order prices.

>($180US).
>Bill
>

NO! Public domain means public domain. Had I intended to refer to Mr. Bastons software, I would have done so. After 15+ years of software authoring, I do know the difference between public domain and shareware .

I always amazes my how many, like yourself, feel compelled to criticize, malign, and misinterpret the well intentioned postings of others, more experienced and better informed than you.

In an effort to assist a user who was having difficulty decoding POCSAG, I simply suggested that, in my experience, decoding a good clean signal directly from the discriminator almost always yeilds superior performance. This is particularly true with marginally weak signals and/or 2400 baud data. I base these findings on tests using several diferent models of Icom, Radio Shack, and Bearcat scanners. Invariably, the speaker/headphone output exhibits greatly reduced rise and fall times of data transitions, greater suseptibility to noise, and adverse effect squelch if used.

While you may have sucessfully used the headphone output of your PRO-43, bear in mind that your experience does not imply universal applicability.

2166. Best Scanner Software

Newsgroup: rec.radio.scanner
Date: 1995-11-20 00:00:00 UTC
From: kcc007@aol.com
Message-ID: <48p8gs$bnh@newsbf02.news.aol.com>
Source record: 246207

I have an AOR-8000 with a newly acquired computer interface. I now need to pick up "the best" scanner software to use with the radio. I have seen Scan-Cat Gold and liked the way you can build a file then scan from the newly created disk file channels, and liked the delete key for locking out the signals. I have also played with the demo copy of Scan-Star. Scan-Star seems better in terms of the screen/graphic interface, but found it much more difficult to use. Of course I did not spend more that 1/2 hour with each of these programs. Which is better? I would appreciate any comments from experienced users of these products.

Thanks in advance.

kcc007@aol.com

I bought mine from javiation, with no problems. They were responsive to
questions from the time I first inquired until I received it.
But then when I learned of the keyboard
problems, I tried emailing a bunch of times and got no response. So, I
guess they are OK to buy from, but not so good if you have a problem.
In all fairness, I haven't tried the phone yet. But I did accomplish most
of the first transaction via email, except for giving credit info :-)

A similar incident happened to me, except none of the phones used were
cellular. And they were speaking Korean. We still don't know what
happened.

2175. Tucson/Phx Hamfests?

Newsgroup: rec.radio.scanner
Date: 1995-11-20 00:00:00 UTC
From: soren@delerium.engr.arizona.edu
Message-ID: <soren-2011951244340001@yuma7.rescomp.arizona.edu>
Source record: 246216

The FAQ specifies that a good place to pick up scanners is at "hamfests",
but I'm not sure how to find them. How does one locate an appropriate
gathering? Are there any in the near future in the AZ area?

> Will be traveling to Cheyenne from Chicago soon ....

Amtrak uses the frequencies of the host railroad. Assuming you're taking
the Pioneer, it would run over the Burlington-Northern from Chicago to
Denver, then on Union Pacific tracks to Cheyenne.

The Compendium of American Railroad Radio Frequencies lists the following
road channels -
Burlington: #1-160.695, #2-160.920, #3-161.100, #4-161.160,
#5-161.250, #6-160.280, #7-161.385, #8-161.415
(BN Ch 6 is apparently a typo - try 161.280)
Union Pacific: #1-160.410, #2-160.470, #3-160.515,
#4-160.740, #5-160.680, #6-160.980

For your trip, try:
Chicago,Il to Galesburg,Il 161.385 BN Ch 7
Galesburg,Il to Creston,IA 160.695 BN Ch 1
Creston,IA to Omaha,Neb 161.415 BN Ch 8
Omaha,Neb to McCook,Neb 161.415 & 160.920 BN Ch 8 & 2
McCook,Neb to Denver,Co 161.280 BN Ch 6
Denver,Co to Cheyenne,Wy 160.470 UP Ch 2

Amtrak - Chicago 160.305 Commissary & Terminal Road
160.365 Amtrak / Union Station Police
Amtrak - Denver 161.550 station services
RR Police 161.205 mutual aid

Gave this seminar at the MT convention, here is the handout. Many sources used, including some of the stuff from Peter Laws WWW page.

Enjoy.

And please, no publishing, other than electronic. Nothing pisses you off more than seeing your work with another name on it!

2179. Radio Related Web Pages (new format)

Newsgroup: rec.radio.scanner
Date: 1995-11-20 00:00:00 UTC
From: "Brett Miller - N7OLQ"
Message-ID: <48r21r$pgv@ornews.intel.com>
Source record: 246220

I have changed the format of my Internet URL list. Some of the changes:
- Only WWW pages are going to be listed
- The list will focus on Scanning related sites with a few URLs for links to Ham sites

Please let me know if you find this page more or less useful. I found that there are so many Ham related
sites that I can't keep up and many of the URLs on my old list were no longer valid. If you know of more
scanning URLs that can be verified, please send tham to me.

I hope I do not offend anyone by dropping their URL from the list. I will continue to post the old list if I receive
requests for it, but I will not spend much time maintaining it.

Radio Related Web Pages (LAST UPDATE: 20 NOV 95)

You need a database of the business-band lisence holders for the area you
are interested in.
PerCom puts out CDs with this info on them, as well as other suppliers,
too.

2185. Scanner shows signal but no sound...

Newsgroup: rec.radio.scanner
Date: 1995-11-20 00:00:00 UTC
From: davew@blarg.net
Message-ID: <48qn8f$ij5@news.accessone.com>
Source record: 246226

I have a bit of a strange one...

1) Scanner is set to 158.775, which is the listed frequency for the target
2) All dispatcher communications are heard
3) Responses to dispatcher heard 75% of the time
4) Car to car on same freq only heard 10% of the time yet the signal strength meter so the signal at a 7 on a scale of 1-8

Any ideas?

The scanner being used is a AOR3000

Morning LF,

> Anyone know of a way to use the interface done on an AR8000 for a
> Scout to communicate with a computer? In other words can the reaction
> tune interface be used instead of the AR8000INF cable?

All that is done to adapt the AR8000 for reaction tiune is add a 2.5mm socket - no "interface" is added/changed or similar. The centre pin of the 2.5mm socket goes to the RX in line of the AR8000's interface connection. It is a "one way" communication system, ie the Scout sends info to the AR8000 - no data is (or can be) sent from the AR8000 to the Scout.

If you want to commincate with the AR8000 with a PC you will need the AR8000INF, CX-12AR or CU-8232 interface alternativley you could make your own up with a MAX232 and a few components for consdierably less also.

> communications, but the 8k is not going into remote. anybody out here
> have any ideas?

Is the Scout set for AR8000 command outputs or CI-V outputs. When you
turn the Scout on it has to say AR8000. MAke sure the AR8000 is turned
on before you turn the Scout on - if not you will have difficulty at
times.

If the problems continue after checking the above it sounds like you have a
duff lead/or solder connections.

Actually, the only cell calls the police monitored from that particular
white Bronco were made *to* the police from an occupant of that Bronco.
The police did *not* get the location of the Bronco by any manipulation of
data involving cell phones. A motorist called the police, and reported
seeing the Bronco. That's how they found it.
All other stories, no matter how authoritative, are fictional.
Sorry.

You gotta be kidding!

$500.00 could purchase Yupi MVT-7100. The Icom R1 was extremely overpriced by Icom. Unfortunately, several years ago, I got suckered by the R1. Just about every scanner provides better performance than the R1 and costs less. Icom should have sold the R1 for about $150.00. That would have been a reasonable price for the level of poor performance.

Jim,

Kiss off! I have had most of the current crop of scanners including the MVT-7100, 2006, R-100 blah blah. What I have kept is a Pro-43 excellent programming for the USA and an R-1 because it is small enough to carry. While the MVT-7100 performed well it was no better in normal use than the Pro-43 if you are interested in the exotic ie. SSB or 70mHz the Yupi will do it but the damn thing is too big. The R-1 suffers from intermod when used improperly but if you use the supplied antenna it works reasonably well. The red hot receiver is a real plus for T-hunting and interference location but perhaps you don't have the technical interest for those activities. Actually I suspect what you want is to con some seller into a low ball price so you don't have to pay what an R-1 is actually worth. How about giving it a rest for a while.

>{:->frequencies.
>

The thing to do is to check out the antenna on the portables to see if its VHF (long and fat) or UHF
(short and fat or long and thin)...hmmm parden the obvious sexual puns that could be made here regarding
"rubber duckie antennas"...anyway, they are most likely on the LPI (low power industrial) channels
used by security/priviate eyes/any other lower power short range handheld users...here are the
most common UHF ones:

451.1875
451.7875
454.200
454.225

And here are some more newer ones (these are the ones used for the new motorola "spirit" ht's
being sold at radio shack and bell mobility stores:

452.0625
452.3625
462.825
463.850

I have VHF too if you want (better still; go to coles bookstore and buy the Haruteq scanner book.It lists
all the common frequencies). There is no listing for Million Dollar Saloon or Sundowner in N.F.

Good luck...

I personally don't care one whit whether the R-1 is any good or not. I merely wish to point out that based on the asking and selling prices (I followed up on a few sales), the market for a mint unit with box and documentation is between $300 and $500. The average is about $400 to $425. I hvae tracked the used asking/selling prices for this scanner as well as dozens of others and have compiled the equivalent of a Blue Book. That information will be readily available soon on a scanner web page--as soon as I finish tabulating the information. To the gentlemen who pointed out that the R-1 is worth $150 to $300, you are both wrong. I've done the analysis while you've been sitting back talking about things you evidently know absolutely nothing about. Case closed.

: >disclaimer goes with the mod (If you break something, its not my fault,
: >etc...) Its a good little device for the $$$$

: Ok this leads me to my next question. Are there any good ways to improve
: the performance of the counter? (meaning range) I can think of two things
: Using an antenna that corresponds to the frequency you are looking for
: (mentioned in a previous post), and possibly an rf amplifier with a filter
: that will only allow the range of frequencies you are interested in to come
: through. (To filter out noise).

: Are there any others, and are these two sound?

: Thank you,

: Jeff Thompson

What somebody needs to do, is to:
1.find a logic line on the unit that changes state when the display
shows a valid count.
2.using a bit of logic, interface the above data with the above
mod(grounding TP17).
3.put a switch on the unit to turn the above mods on and off
The result:an automatic hold, just like the expensive ones.
If no one else figures this out, I may eventually "take a crack at it"
myself.
Another possible mod, is installing a more accurate timebase.

I'm new to scanning.

I just moved to Norwood and would like to find several frequencies to monitor.

Frequencies wanted.

Boston Logan Airport (tower to aircraft and vice versa)
Norwood Airport (same)
Norwood emergency frequencies

Also would like to find out if the NASA shuttle can be monitored.

Feel free to e-mail me directly.

Thanks in advace.

Juan

I'm really a pilot....HONEST....OK, OK (RC aircraft pilot).... Geeesh.

In the Western Chi Suburbs there are 5 J-codes (J-1 through H-5), J having no real meaning as far as juvenile or jail or anything like that. a J-3 is a male subject a J-5 is a female subject. The other codes deal with property, papers, etc I don't exactly remember which.

Usage 10-25 123 Main Street speak with a J-3 reference a 10-50 pd

English: Report in person to 123 Main Street speak with a male subject reference an accident property damage only.

Message-ID: <48stcm$eq0@news.gate.net>
Source record: 246175

I have an interesting piece of test equipment. It is a Nokia computer controlled 800 MHz signal follower. It is like a PI would use to track cell calls. The whole thing fits in a shoe box and includes an HP 100Lx palmtop computer for control, and a QRP FM broadcast transmitter for the audio section. It will retransmit the received signal to any nearby FM broadcast radio (i.e. car, home stereo ...)

I have these devices in the package, and state the price I paid:

CSI 519.00
RFM-F and antenna 495.00
RFM battery pack/charger 64.00
EZ track software 80.00
FM mini transmitter 20.00
HP 100LX palmtop computer 750.00
(includes a 10M flash ROM ------
silicon hard drive) 1928.00

The interface I have is for the Icom R7100. I never used that part because I purchased the RFM.

I will sell the entire package to the first person offering me 999.00 plus shipping. Time stamp will validate your offer.

I have bought and sold many items via the Internet/CI$, and will offer references.

To all potential flamers: I DID NOT import OR manufacture this unit. I am aware of ECPA rules, and I will not debate certain assaults
on our liberties in this thread.

Oh, by-the-way, this unit works very well! Demos available in SW FL.

Mike "777"

2234. PGH, Pa Frequencies Needed

Newsgroup: rec.radio.scanner

I am looking for a list of Police, Fire and EMS frequencies for the following Pittsburgh, Pa communities:

Baldwin Twp.
Castle Shannon
Dormont
Green Tree
Mt. Lebanon
Whitehall

If you have any of these, please e-mail me. Thanks!

Also, if anyone has a list for Allegheny County in PA, I would like that too.

> where cani find the cellular frequencies on my 200xlt scanner??

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System

800-832 869.040 - 870.000 RCC - voice
1-312 870.030 - 879.360 RCC - voice
313-333 879.390 - 879.990 RCC - data
334-354 880.020 - 880.620 Telco - data
355-666 880.650 - 889.980 Telco - voice
667-716 890.010 - 891.480 RCC - voice
717-799 891.510 - 893.970 Telco - voice

Mobiles transmit 45 MHz below the base (824.040-848.970) and
are usually repeated by the base. Channels are 30 kHz apart.
Channels 800-832 are also identified as Chs 991-1023.

You are the ONLY one I have ever talked to (out of dozens) who
have something good to say about the R1.

What I have heard from many about the R1 is: excessive birdies,
lousy intermod., insensitive, front end overloads. Other problems
I can not recall now, but there are others.

Perhaps your perception is clouded by that fact you have never used
a GOOD scanner? Buy a Yupitera 7100, PRO-2006, or just about any
other decent scanner ... then come back with your modified opinion.

: > Does anyone have one of these radios? What do you think?

Yes, and the image rejection on the 800-999MHz band is so poor
that you can receive the "blocked" part of the 800MHz band by
tuning the radio to (desired frequency) + 46.1MHz.

: >
: > I'd also like to get a general feeling for what people think about the
: > Standard brand.
: >

I like it's size (not too big, not too small). The DTMF encoder
allows direct entry of digits 0-9,#, and *, but not A,B,C, or D.
You can program these digits into one of six DTMF sequence memories
though.

I've had mine for several months. Works fine, but the tiny
"3-band" antenna supplied doesn't work worth a darn on 2-m.
And 35mW on 1280 is useful for only the most local 1280
repeaters (and as a signal source for testing).

DOOM is a violent, personal combat oriented, fabulously fun video game,
popular with the 10-30 year old crowd. You may have heard of it.
Anyway, in the game there are 55gal. drums scattered around each level
and when shot they blow up really good. Anyone standing near an
exploding drum gets transformed to a pink bloody pulp that pretty much
looks like Spam canned meat. So if you wait around and do this to
someone intentionally you've "spammed" them. Very desirable in personal
combat. Not desirable on the net.

Spreading messages needs to be more precise since the objective is
communication and not mass bloodshed.

I am new to scanning and just purchased a RS Pro-51. When I bought it the salesperson told me that it was cell-blocked. A customer in the store at the time overheard this, and as I was leaving, told me that his was supposedly blocked also, but he was receiving what he was sure were cell phone calls on his from time to time. Well for the past two days now as I've been learning how to use mine, I have scanned the 800-900mhz range and have found what must be cell freqs. I know positively that several have been because I have heard the caller(s) say things to the effect of "I'm turning on to I-85 now..." or I have heard someone reply affirmative after being asked if they were on their cell phones. Has anyone else recvd cell freqs on a supposedly blocked scanner? And if so, what is the explanation? Also, could someone tell me exactly what imaging is, and if it relates to the above question. Thanx in advance!

tx.forsale,rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,houston.forsale,dfw.forsale,alt.radio.scanner,alt.forsale

Some time back, one of my co-workers (not a ham, just a guy who likes to listen to SW broadcasts and scanners) purchased an R-1 and asked me to evaluate it. He said he thought maybe he had a few complaints about it, but because he was inexperienced at this sort of thing, wanted a "learned" opinion.

I played with the R-1 for three days and two nights. I was very disappointed with it, especially in light of the very positive experiences I've had with Icom equipment in the past. I found that it suffered badly from front-end overload, poor selectivity, poor sensitivity on the HF bands (compared to my Kenwood TS-850S using the same antenna, a Butternut vertical, and also to my Sangean ATS-803A using the same vertical), and it was terrible on the AM and FM broadcast bands.

When I returned the set to John and told him of my findings, he replied that he had noticed the same things. He returned the R-1 to the dealer and wound up buying a Sony ICF-2010 SW receiver and a Realistic scanner of some sort. He later reported that he was quite happy with the performance of both.

I don't want to get into an argument with anyone, nor do I wish to be "flamed" because someone thinks my opinion is "wrong". It is possible that the set I tested was a defective unit. It has happened to me before (a new piece of gear was bad at purchase). It is also possible (though unlikely) that they are all bad, and a few folks have gotten ones that work better. Whatever.

I just wanted to share my opinion on the R-1. I understand that the new version, the R-1-15, has been improved. I don't know.

73 and have a nice Thanksgiving. Dean, KC5NG

Michael,

I have discussed the Icom R1 personally with Icom technicians in the
Irvine California Icom repair facility. They substantiated my claims
regarding intermod and front end overload. Therefore, it is unfortunate,
but true! If you do not believe me, contact Icom technical support. The
Icom R1 is a fun toy as a second scanner.

Regards,

Jim Wayda

>divisions are organized as far as which divisions cover
>the various geographic areas in LA?

Simply buy the Southern California edition of Police Call.
If you are in NY, I guess you will have to mail-order it.
>
>What I'd also like to know is which division numbers correspond
>to those areas, e.g. patrol car designations 6-Adam-39. What division
>would 6 correspond to?

Hollywood, as a matter of fact. The 39 refers to a reporting
district that most closely represents the centroid of a
contiguous group of reporting districts within one geographic area.
>
>And last but not least.... From what I understand "Adam" corresponds
>to a two man patrol unit, "L" corresponds to a one man unit and "Mary"
>corresponds to a motorcycle unit. I believe "X-ray"

"X-ray" is simply an extra patrol car on a particular shift. The
unit is usually used to target a particular type of crime in
a particular area.

> is either a detective?

"William" units are detectives.

>or one of the specialized units. What other code names are used?

Are there any scanner directory includes frequencies for the State of Alaska. I did a quick scan in Radio Shack Catalog on "Police Call" and they don't seems to have one on AK. Is Bearcat Directory still exists and possibly have AK frequencies????

Many Thanks

Fu

The PRO-2006 can be made mobile, but was not made to be mounted
in police cars that jump curbs and chase bad guys.

Performance wise, the 2006 is far better than the R1.

The R1 may have a place in the market, and apparently you are
one of the few who can actually use a poorly performing, but
handily small scanner.

hi there pity your not near this neck of the world . N.Ireland
no mods needed just a new antenna ?? that converts cellular down to
130 -160mhz the normal price is around 50 stg but it does mean that
the older non-cellular scanner can now pick up all without mods
works well one shop was selling them with a cheap 15stg ($10 or less)
multi band radio and it even worked with that if you want more info
i'll get it for you ..mailme john IS the inquiziter

>-c
pass on most of your questions but it must be able to do cell as the
versions here in the UK come with freq up to 956.00
yet i have never seen a BC going below 29 ??
last piont most of the UK BC come with not 29 -56 but 66-88 mhz
so there is probably a mod to reinstate that band ??

>special?

>--
Hi yes most of your replies have got something right about
replacing batts you can replace with plain old ni-cads AA or AAA
but a point to watch if you solder them there little'ums be careful
of the heat it is not uncommon for them to explode ????
re the 9v no, there is no milli amps worth playing with
The memory effect does take place which normaly restricts the batt
life to about 2 yrs. Most c/phones get very little TX use thus
never get drained . it is a good idea to leave the phone switched on
(talk) over the weekend to allow the batts to go completly flat
every couple of months or so BUT REMEMBER
1---- unplug the phone --------- line engaged ???
2---- its transmitting --------- WHO's tuned in on a scanner ?

there is one other way to get 6 -12 months out of the old batts if
ya wana know email me... no-fee I'm free and i'm not selling an'ting

Charles,

I have had a MVT-7100 at the the same time as an R-1 and a Pro-43.
The Pro-43 is the best compromise for quasi normal scanning in the
USA. It has a good choice of bands and steps obviously it was designed
for the US. The MVT-7100 is cumbersome to operate way to large for my
taste. It may do it all but that is meaningless if you don't have it
with you. The R-1 mostly suffers from intermod if you put too much
antenna on it. The original equipment antenna is designed to work with
the characteristics of the receiver. You know professional RF engineers
might just know a little bit more than you do about optimizing.

Of the three scanners the only one that has been sold is the Yupi.
It would do a lot but in trying to be all things to all people it
was at best a compromise. It had too many birdies I used a dozen or
so of the skip memories just to get rid of them. The SSB was cute but
for the most part useless. To get HF you really need an antenna of
some size then what is the point of a smallish receiver with 20' of
antenna. The step sizes for those bored enough to listen to cellular
are just plain wrong and as a consequence it kept landing on the data
channels. This might suit a cell phone cloner but I have a real job so
for me it was just a pain.

The R-1 serves me well in several capacities. The red hot receiver is
useful in T hunting and interference location. The batteries are easily
and quickly changed try that on a Yupi. All of the above aside it is
small enough that I will take it with me so I actually get to use it.

In summation different strokes for different folks what suits you
may not suit me. Just because the R-1 is not for you does not make it
a piece of crap. If you had intermod problems I suspect it was mostly
operator error. For as much as is packed into that little package I
think the R-1 is reasonably priced. On the minus side I would not have
the new one. To block the entire 800 mHz range to comply with the
egotistical cellular protection act (ECPA) is dead solid stupid particularly
with many public safety organizations going to 800 mHz trunked systems.

Burt Fisher <k1oik@ccsnet.com> writes:
> Frequently I hear hams say, THE name HERE is_____.
>How often do you say when you meet someone (assuming your name
>is Charlie), THE name HERE is Charlie? You never do that right?

It's a different culture, Burt, and you're experiencing culture shock. Amateur Radio has been around a lot longer than you have, and it has developed its own "code of conduct" and a particular way of speaking. In Mexico, one does not say "My name is ____" -- to do so would be considered an EXTREMELY impersonal statement! One says instead "I am called ____" -- and that's just the way it is.

You seem to be ridiculing a common practice merely because it sounds impersonal to you. From the other point of view, you are attempting to use face-to-face speaking conventions when you are communicating with voice only, and that sounds just as strange to many "oldtimers" as the way it's done now sounds to you.

Remember that for the most part, radio communication is just barely interactive; while you are talking, there is no feedback from your listener(s). Don't expect to be able to use the same conversational style in all situations. For instance, how often do you begin a short monologue with the phrase "Three minutes ago, so-and-so said:" and a direct quotation? How often do you punctuate your sentences with "emotion" indicators? Be flexible. When in Rome, do as the Romans do. Don't flame them lest you be burned yourself. (Oh, sorry. Too late.)

FOR SALE ICOM R-1 SCANNER

I Have an Icom R-1 HandHeld Scanner For Sale
Full coverage from Factory 100K to 1300 Mhz (No Breaks)
I have everything in perfect condition Box, Manuals(with cool added notes)
I also have the BP-90 Battery pack which allows user to run it dead and
then switch to internal back-up for another 3hrs of use (cool). Comes with
AC Charger for both batteries. The only reason I am selling it is because
(I Need the MONEY) There is absolutely nothing wrong with it, I will
warranty the unit, has very little time on it. All I really ever used it
for was to listen to neat stuff as I was going to sleep. See there is a
sleep timer and an alarm function in the R-1. So I would set it to shut
off automatically and then wake me up in the morning for work, I really
like this feature! and will miss it, Back to the old alarm Clock action! I
hate that when that Happens! I remember when I first got it I was so
blown away buy the size of it, It is so SMALL yet so powerful with a bunch
of cool functions, Great little radio!

I PAID $575 + BP-90 Battery $25 + Tax for a total of $648
I will sell it for $350 Straight up

Message-ID: <48vr9s$3av$1@mhade.production.compuserve.com>
Source record: 246122
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I would like to hear from people who have used any of the JPS Communications noise reduction devices with scanners. I live in New York City, where I use a scanner to receive transmissions in the 25 to 50 MHZ range. I have a dipole antenna on the roof of the four-storey brownstone in which I live. In addition, I have a bandpass filter designed to block out all frequencies except for those falling in the 25 to 50 MHZ range.

Because of where I live, I experience a great deal of noise in my reception. I am thinking of purchasing a noice reduction device from JPS Communications. (They have a home page on the WWW.) If anyone has had any experience with using such devices with scanners, I would appreciate a post to alt.radio.scanner or rec.radio.scanner or e-mail to me directly. I would like to know what device you used and how effective it was.

Thanks. Richard Young, 75353.225@compuserv.com.

> Didn't he say Saint John? Not St. John's?

In his header, the news gateway directly before scratchy.mi.net is news.unb.ca, which is the University of New Brunswick in Saint John, Canada. I assume this is what he was talking about, as the chance of him living near a "Saint John" and passing the article through a _different_ Saint John would be rather low.

I knew it was Saint John; I was using the posessive ['s] to indicate that the police in question were the civil servants of Saint John (the town, not the holy figure), though in retrospect it looks like "Saint John Police" would have been slightly clearer.

> Yes, the Saint John police are on a Motorola Trunk system in the mid
> 800Mhz range.

The list makes no mention of this. As I said, I have no firsthand experience with Saint John's frequencies (the frequencies of Saint John).

>>Why not skip insulting our intelligence and just ask "Hi, I want to listen
>>in on cellular calls, can I do it with a PRO-51" like the rest of us do.
>
> Didn't he say PRO-41? Not 51?

DOH! (Check the posting time: it must have been around 3:00 AM when I am not exactly in a precise frame of mind)

Yep. Sorry. I don't know of any 800Mhz mods, though like the 800Mhz trunks this doesn't necessarily mean they don't exist.

What you need is to find out what train and its number. There is a book which I don't have at home which will give you most the on board freq. I have found that most times the on board freq. is the same as the engineer uses.

If you email me the train info I will try to remember to bring home the book next wee if thats not to late.

If it is just scan the railroad freq. which are 160 to 162 range.

From: cbromley@mason2.gmu.edu
Message-ID: <490c03$bht@portal.gmu.edu>
Source record: 246126

I am currently writing a paper for a class regarding cellular security and am trying to acquire more information. I posted a message that got canned from the newsgroup because I guess it was too bold of a question. What I really want to know is just how the scanning thing works. I understand the concept and understand that the new scanners come with internal blocks so that you cannot scan cellular frequencies. I know that there are ways to modify the scanner to be able to scan cell frequencies, but what I
don't understand is how the scanner interprets the id numbers. I'm NOT asking how to do it, all I need to know for my paper is if it is another modification that needs to be done to the scanner or if there is another piece of equipment that needs to accompany the scanner. Can anyone answer that question for me? Thank you in advance!
Please e-mail me at cbromley@gmu.edu

Correct.
Amateur radio is just one of the many secondary uses of 902 to 928.
Not many hams use it because the equipment is not readily available
in off the shelf products (like 2m, 70cm and 23cm). And with all
of the other uses on the band, many question it's usefulness to
hams.

Ya know....

Nothing like trying to sell something and someone else bad mouths the product and the price you are trying to get! There may actually be people that like the product and find the price reasonable, but NOOOOOOOO. You can't possibly be expected to sell something you own for the price you would like to get.

Everyone has the right to their opinion and to voice it, however if you were selling something and had someone CONSTANTLY bad mouth it you would be pissed off too.

You have made your point, we have all heard it. Now please give it a rest!

I recently purchased a RS Pro-39 scanner used. I have since become quite addicted with the scanning hobby. However, I have searched a few of the FTP and WWW sites for information and mods for this scanner and have found few. Does anybody else out there own this same model? Any information about increasing coverage and other enhancements would be appreciated. Also, any details about what each of the diodes in this particular model does would be welcome.

Thanks in advance

I assure you that the problems that I experienced were NOT due to operator
error. I used the antenna that was supplied with the R1. In So Cal many
police departments in the 460 mhz band are spaces 50 khz apart. The R1
could not deal with this! Even a cheap $100.00 Radio Shack Scanner does
not have this problem.
However, if you live in Podunk Idaho, you probably will not experience
this problem.

>>>Does anyone out there have a breakdown on how the LAPD's
>>>divisions are organized as far as which divisions cover
>>>the various geographic areas in LA?
>>>What I'd also like to know is which division numbers correspond
>>>to those areas, e.g. patrol car designations 6-Adam-39. What division
>>>would 6 correspond to?

6 is Hollywood Division, Adam is a two-man unit, and 39 is the
unit's designation (not the reporting district) . The reporting
district is called out by the dispatcher when broadcasting the call.
It's usually worded "RD2462" for instance.

>>>And last but not least.... From what I understand "Adam" corresponds
>>>to a two man patrol unit, "L" corresponds to a one man unit and "Mary"
>>>corresponds to a motorcycle unit. I believe "X-ray"
>>> is either a detective?

L is Leutenant or Supervisor, usually a one-man (or woman) unit.

When LAPD uses the term "X-Ray" it is phoenetic for the letter X
like when running a license plate. When the CHP uses the term
"X-Ray" they're referring to a female motorist.

LAPD extra patrol units are called simply "X" units,
as in "12-X-48".

Detectives are "W" or "William" units. Bicycle units are called out
as "cycle", gang cops are called out as "crash", vice is "victor",
report takers are "U" or "U-Boats", juvenile units are "john".....

Does anybody know what "slow" units refers to? Haven't figgered that
one out yet.

I think i'm listening to the local action too much at the office.

Keywords:

I bought an old BC175xl at a garage sale and it needs a power supply.
Does anyone know what it needs? How many volts and what milliamperage?
What about tip polarity?

Thanks!!!

Hello...

I've been trying to receive audio from the NOAA satellites lately, but have not had much luck. I'm using a traking program to listen at the right times, and have the software to decode wefax signals but have failed to hear anything on the freq's used by NOAA 11/12. Do I need a yagi antenna to hear them? What mode do the satellites Tx in?

Any help anyone could provide me with would be appreciated...

Thanks...

Hi Chris:

This is from some info I have from NOAA

try 137.50 and 137.62 MHz Mode: semi wide band FM
antenna to use: crossed dipole with reflector, or steerable yagi array.

I am a happy user of the AR8000 Toolkit (Worth the shareware fee).

There is another, less-polished way to program the AR8000. Assuming you
have the computer interface (such as a CU 8232), you can also just use a
terminal emulator and paste a "Squirt" script into the AR8000 to program
it.

There is information on Squirt Scripting at Victor G. Healey's (Ki4je,
vhealey@crl.com) webb pages at:
http://www.crl.com/~vhealey/ar8000.homepage.html . The specific links of
interest are http://www.crl.com/~vhealey/squirt.html and
http://www.crl.com/~vhealey/ayotte.html .

Hope this info helps.

2323. Need help w/ dying PRO-43...

Newsgroup: rec.radio.scanner
Date: 1995-11-23 00:00:00 UTC
From: batwing@digital.net
Message-ID: <491val$qjs@ddi2.digital.net>
Source record: 246076

Didn't use the old 43 for about 6 months. Display shows strange freqs,
like entering 406.025 displays 06.0312, etc, etc...

I tried the 2, 9, manual, turn on radio reset...nothing doing

Anyone have any other ideas?

Thanks

Doug

SUBJECT: NEEDED-Radio Equipment of All Types
Hello,

My church youth group is going to be providing a sort of
communications command center during an upcoming city festival which
draws 100,000 people over two weekends in December. We are soliciting
donations of radio equipment of all types: CBs, scanners, Ham radios, etc.
We have people who are licensed to use Ham radios. But what we really
need are handheld CBs and scanners. Shipping will be paid by us and you
can rest assured that your donation will go to a worthy cause that will
get all the use out of it that's possible.

Please email me.

Thank you,
Chip Adams
GHVZ65C@prodigy.com

Not at all. I have had the exact same experience with my R-1. When you
really think about, it's pretty ambitious to cram a scanning receiver
that can pick up low, medium, high frequency, and VHF/UHF in a
self-powered case that fits in a shirt pocket. It's actually not a bad
VHF/UHF scanner, IMHO, but they should have kept it at that.

When batteries get low, it will occasionally go into a mode, where
instead of the FM band covering 88-108Mhz, It'll go down to 76Mhz,
and have a TV band, with channels 1-12.
The 76Mhz figure seems real, as I do get images of stations at
20.8Mhz + set freq or so.
I'm in the UK, any ideas on where these freqs are meant for?
The device in question is the Awia hs-TX446

Couldn't seem to find a more appropriate group.
Obscanner: Yes, it does pick up taxi firms at the lower end of that band.

Yeah, you get a continuous model. It's easy to change, even if it's blocked. That assumes you're willing to buy an interface and software to go with the scanner. The interface/software is essential in my opinion. It makes programming a heck of a lot more tolerable and because it is so easy, you're willing to make the sorts of changes and additions that you would not ordinarily do. For example, I load in Secret Service freqs if the President comes to town and I dump them for something else at other times.

Javiation also included the Scout mod and a leather case with clear plastic windows in the price, along with two-day shipping. Not sure if that special offer is still available. Add in the mod, case and shipping and you're close to US prices, even with customs.

: alt.sex or alt.stupid <g>.

I'll drink to that.

I heard a story of someone who was watching TV and heard the most
shocking things on their Fisher Price baby's room monitor. The sound of
breaking glass, two male voices, some thumping sounds and a baby crying!
In total panic the parent ran to the room to find a quietly sleeping baby.

I suspect somebody with a 49Mhz walkie-talkie and a tape recording was
having a little fun. Either that or someone had a radio tuned up on
49Mhz.

The range of those room monitors is quite something. I can hear one in
my neighborhood and one day decided to DF it. (okay, I was bored I admit
it). Anyway, I ended up driving to the far south end of my neighborhood
before I found it. I was quite amazed! I'm sure the owners would be
even more amazed if they knew I could hear everything that went on there
24 hours a day. This was nearly a mile away!

In fact, they are so damn strong that they make the 49Mhz walkie-talkies
quite useless in the city.

Cheers!

Andy

Hey folks, these laws changed about 2-3 years ago under the
Florio administration. It is now legal to have a scanner
in your car even if you are not a police officer, fire fighter
or rescue squad member. The only prohibition is that you may
not have one for use in committing a crime.

I'd run upstairs now and get the quote of the law, but the kids
are asleep, and I'm on call tonight. If you get Scanner Master
for NY Metro, they have a copy of the law just inside the cover.

You can get a copy of a really good listing of frequencies from
Gilfer. I think they have a web sight. Their in Park Ridge NJ.

As an old "Cake Eater" I was pleased to see your post. The
Primary frequency for Mt. Lebo, Dormont and Castle Shannon is
460.100. I'm into EMS in NJ, and when I visited Pgh last, I
stopped at the EMS "South" just off of Castle Shannon Blvd,
they seem to be dispatched on the police frequency.

Stop at Radio Shack and see what they have loaded in their
scanners?

Good luck

>>> > NEW UK MAILING LIST FOR TV & VIDEO ENGINEERS < <<<<

Hello

Sorry for being off subject!

I am thinking of starting a closed (Free) mailing list for
television and video engineers in the UK. If you are involved
with the television and video trade please get in touch, wether
you work freelance from home or work for mastercare.

The purpose of the list will be to exchange fault notes, give
advice, general talk about the trade etc. Discuusion quality
should be quite good as list membership will be by invitation only,
hopefully this will become an exellent pool of knowledge.

I hope to get this off the ground as soon as possible if the uptake
is good. Please email me if you are interested.

Please pass this message to anyone who you feal may be interested.

I have found the Radio Shack publication Police Call to be very helpful.
It was well worth the $9.95.

The frequency to monitor for Fells Point is probably 453.7750 as this is
the frequency for the Southeastern district of the Baltimore City police
department. For downtown scanning, try 453.4250.

2358. I'll trade my Icom 706 for your Astro (UHF)

It is perhaps not coincidental that the Japanese FM band starts at
76MHz (and ends at 90MHz). Presumeably under the duress of low battery
power it reverts to its true self...

Bernie

PS. Some Japanese radios like the Sony '2010 have an FM band from
76-108MHz (even when the batteries are fresh).

2379. FM Reciever Boards-Computer

Newsgroup: rec.radio.scanner
Date: 1995-11-25 00:00:00 UTC
From: 76212.2546@compuserve.com
Message-ID: <497dqk$14t@dub-news-svc-4.compuserve.com>
Source record: 245894

I have begun to see more and more FM Reciever boards for the PC. It comes with a nice GUI interface to look like a real stereo, and is supposed to allow the computer recieve the full FM spectrum. This brings up an interesting point....has anyone ever considered trying a MOD to these things to increase it's freq range? I think it's an interesting concept, but would take someone a whole lot more knowledgeable in electronics than me.

FFT (food for thought)

You can buy a new Bearcat 3000xlt for $369.95 from EEB in Vienna Va. The 3000xlt is an excellent top of the line receiver. Why would anyone want to pay $350.00 for a 2500xlt? The 2500xlt does not perform as well as the 3000xlt.

Look right here on this newsgroup. Pro-2006's have sold for $250.00 on
this newsgroup. If you indicate that you are in the market for one, I am
sure that someone will reply that needs Christmas money. The 2006 is one
of the best base scanners ever made. New scanners in the under $250.00
price range cannot even compare to the 2006.

Source record: 245906

I have a Pro 2006 which I bought about 2 years ago. Lately, I have noticed that some of the public service frequencies I programmed into it almost never getting locked onto by the scanner. When it does detect activity on these frequencies, the signal is pretty weak and there is more static than there had been in the past. These frequencies are being used, in terms of distance, at pretty much the limit of what I would expect the scanner to pick up with the antenna that came with the scanner. But I believe I have really noticed a drop off. I purchased another antenna, at RS for $9.99, to replace the one that came with the radio, and it did make some improvement, but not much.

My Pro 43 still picks up these same frequencies with little or no trouble. The signal is much clearer. The 43 is using an antenna similar to the one on the 2006.

Is the 43 that much more sensitive than the 2006, or am I really noticing a decline in the 2006's performance? If so, is this drop off possibly reparable?

By the way, for the frequencies in question, the Pro 43 manual says the sensitivity is 1 uV. The Pro 2006 manual says its sensitivity is 0.5 uV. I do not know how to interpret these figures.

I thank any respondents in advance.

Jim

i'm not sure if i know what you're asking. 2A is just motorola's
designation for a certain CTCSS tone, but i don't know which one (is it
110.9?). just find a lookup chart for the pl's (there are several that
cross-reference the EIA tone, icom's tone # for the tone, motorola's
tone designation, and a couple of others.)

2395. Amusing report...

Newsgroup: rec.radio.scanner
Date: 1995-11-25 00:00:00 UTC
From: myers@West.Sun.COM
Message-ID: <495uf2$fiu@abyss.West.Sun.COM>
Source record: 245910

Listening to 123.025MHz (helicopter Unicom) tonight, I heard several helicopters working the Sobek (missing model apparently found dead) investigation site near Palmdale (CA). What was amusing the exchange between the (bored, I would say) pilots regarding a forced landing site. One says, to no one in particular, "you pick your forced landing site yet?" and someone else responds, "yeah, I'm gonna head straight for the emergency vehicles". Other comments followed, like, "I'd head straight for headlights and pray no one is standing there".

What was most amusing was the very calm way they all discussed crashing. It reminds me of the way I would discuss good ways to crash when motorcycle racing...

P.S. Another funny exchange was:
[it is dark and the body site is in the mountains]
"I'm surprised I can see as well as I do", "You see that campfire over there?" "Oh yeah, I'll bet he thought he would come out here and get away from the city noise" "Yeah, well, welcome to the city"

Also:
"Did anyone hear if the boyfriend was allowed to land?" "No, they didn't want him to disturb the crime scene, they told him no".

L is a one-person unit. The supervisors use unit numbers that are
multiples of ten and have call signs even when they're not mobile.
E.g., 8-L-10 is a supervisor, but 8-L-1 is just a one-person modile
unit. Also I think the shift supervisors are sergeants not
lieutenants.

Check the Grove catalog: http://catmac.grove.net/CGI.SPG?Product=CVR+3

GRE Super Converter

Looking for the best way to get uninterrupted 800-1000 MHz coverage on your
desktop scanner? Whether your scanner doesn't have that range now, or is one
of the models with certain 800 MHz frequencies factory- censored, these
high-sensitivity converters from GRE will fill in the gap! Simply install a
nine-volt battery (not supplied); BNC connectors are provided to interconnect
with your scanner. Use an 800 Mhz-capable external antenna or attach a whip
adjusted to about 4" or 12" (for gain) like the Grove ANT 19 or ANT 8. When
you tune 410-512 MHz on your scanner, you will be receiving 800- 1000 MHz!
A handy bypass switch allows you to restore normal operation of your scanner
without having to remove the converter.

This is a common characteristic of the 2035. These are images. I
have found them on mine also. There was an article in Monitoring
Times about this, it stated images of pagers can also be heard
I forget the freq.

Images can be monitored also.
I believe that was his original point.

Hi Todd,

I have the combo with the reaction tune plug fitted on the AR and it all works just great. Best investment I have made. Great for driving allong listening to your favourite frequencies and as soon as the Scout sniffs out some strong RF you hear it, then when the signal is gone just press LOCAL & SEARCH, SCAN or VFO and you are back to your favourite frequencies.

I also purchased the Opto N100 FM filter which really improves the Scout reception.

Have fun,

George

Hey there.

Does anyone have frequencies of interest for the Lansing, East Lansing, Mid Michigan area? I would appreciate it if you could send them to me directly at bereshr1@pilot.msu.edu or post them on this newsgroup. I just brought my scanner up to school for added fun.

Thanks in advance.

-Bob

Hi Everybody :-)

I have just read a add in a local radio mag for a unit
called the WiNRADiO . By the info provided it is reciever on a card that fits
into your P.C. and is software controled . (S.Ware comes with radio)

The specs given are as follows,

Reciever :- Pll-synthesized triple conversion
superheterodyne.
Freq Range :- 0.5Mhz to 1.3Ghz.
Mode :- AM,FM-W,FM-N,SSB
Sensitivity :- 1 uV (nominal)
Audio output :- 0.2w,8 ohm load
Tuning Resolution :- 5hz
Price $700.00 (Aus)

My question is have any of you encountered this unit or anything like it as I
do not recall reading anything about it in the few months that I have been
reading this news-group . If so could you please pass any relevant info (good
or bad) onto me as I am seriously considering this unit instead of a base
scanner.

Thank you all

Andrew

Jim,

Have you checked the position of the attenuator switch on the rear panel?
If you have other people in your house, it can very easily get set to the
-10db position. My housekeeper has done this while dusting.

No walkie talkies that kids use are in the CB band which would be Ch.14
on a regular CB radio. There's a world of difference between the
cellular & CB frequency ranges.
Hope this helps.

Be aware that disc cone antennas are omni directional. Your transmitted power will be spread out over 360 degree circle. A directional antenna, even a simple dipole, will give you 3 dB gain in the broad-side direction, equal to doubling your transmitter power. Sorry to bother you if you already knew this.

This is one of the nicer things about a public forum like the Internet - it's harder than normal for some sleazeball to get away with selling a piece of junk to some clueless newbie. (I'm not suggesting that you're a sleazeball, that the R1 is a piece of junk, or that anyone on this group may be clueless. Just depicting a scenario.)

On newsgroups where I feel comfortable with the subject, I'll offer my opinions on items for sale for the benefeit of whoever might be considering them. If I feel that a price is fair or a product is good, I'll say so. If I feel otherwise, I'll say so. And I appreciate getting information from other people on the Net concerning something that I'm considering purchasing, especially if it's the opinion of someone other than the seller.

Jim isn't just offering a tight, unsubstantiated opinion of "This product sucks". He's backing his opinion up with his experiences with this unit, and as a seller interested in selling this item you can either:

* accept his criticisms and attempt to explain why they don't matter
* ignore the message altogether and hope your customer doesn't read it
* refute his criticisms by explaining why they are incorrect or flawed

Someone argued that the Net is a marketplace that should be ruled by supply and demand. The laws of supply and demand, however, assume that the buyers have all information possible and can make the most informed decisions. I appreciate the efforts of people like Jim Wayda to keep the net honest and the marketplace running smoothly and fairly.

Source record: 245952

Rat Shack has come out with two scanners recently: the PRO-62 and PRO-26.
Both have triple-conversion and 200 channels, but the 26 goes up higher
(1.3Ghz). Is there any other difference between the two to justify the
additional $120 or so that the 26 costs? Is there really anything of
interest happening that far up on the spectrum?

> Jim Wayda

Jim Wayda correctly identified the problem as did another person who sent me e-mail on this matter. I have moved my set around a bit and probably moved the switch without realizing it. I have now tested both settings, the 0db one and the 10db one. The latter setting seriously reduces the set's ability to pick up weaker signals.

I thank all of you who took the time to reply.

Jim

> What keyboard problems?

The "print" on early keypads wore off with some users. This did not seem to occur with everybody. I'm sure different users had perhaps a higher "skin ruffness" than others that didn't help. AOR appear to now use a alternative "ink" as the problem is not (and hasn't been for some time) on current AR8000's.

2450. 2006 intermod problem

Newsgroup: rec.radio.scanner
Date: 1995-11-26 00:00:00 UTC
From: llevy@pacificnet.net
Message-ID: <49alej$77q@zippy.cais.net>
Source record: 245959

A recent thread about the -10db attenuator switch on the 2006 brought to mind a chronic 2006 problem dealing with pager intermod on the VHF hi-band.

This has been a continuing problem on my rig, as it apparently has been for others judging from messages about the problem from time to time.

I've tried different antennas, shielding, etc., but the only solution that has worked somewhat is signal attenuation. I've found that -10db is too much for simplex comms like VHF-marine band, and a -3db to -6db in-line attenuator seems to cut the intermod down while not knocking down signal strength too much.

Anyone else have any other solutions?

73's

AM> I'm : able to get the registered program for you, if you want it.
...
AM> Bill, do these programmes make use of their own hardware, a build-it kit
AM> or perhaps a soundblaster card?

Message Tracker comes with its own cable, and PD has, in the DOCs, a
schematic for the cable. In either case, an OP-AMP is used to convert the
audio to a digital signal of the correct level for the serial port.
Neither is designed to work with a sound card, and I'd imagine a total
re-write of the software would be needed for that, making the software
package purchase sort of unnecessary.
Hope this helps.

> moving car in New Jersey and New York City?

In New Jersey, yes. However, it's a crime to possess or use a scanner during the commission of a crime. Due to the definition of "scanning device", radar detectors are specifically excluded and are completely legal even if you are speeding.

>>right times, and have the software to decode wefax signals but have
>failed
>>to hear anything on the freq's used by NOAA 11/12. Do I need a yagi
>antenna
>>to hear them? What mode do the satellites Tx in?

40 kHz-wide FM. The light/dark information is transmitted by *amplitude*
modulating the constant frequency carrier tone. Note that this is *different*
from the AFSK method used on the shortwave bands where the light/dark
information is conveyed by varying the *frequency* of the transmitted audio tone.

This means that your normal 15 kHz-wide FM receiver is going to be too
narrow for reception. My APT setup consisted of an ICOM R7100 with
a Swagursat 40 kHz external IF strip plugged into the back. Another good
system would be the Hamtronics APT receiver kit, which is considerably
less in $$$ than my ICOM/Swagursat combination.

>I think you need a high Gain Antenna...

For near-horizon performance, you need to invest some time/energy/funds
into your antenna system. However to conceptually test Automatic
Picture Transmission (APT), you only need to find out when a satellite
is passing near-overhead. I've walked around my house with my PRO43
scanner and its flexible antenna and heard the NOAA satellites quite
clearly.

However once you can hear those overhead passes, then what you do from
there depends on the money you wish to sink into it. I used an Advanced
Receiver Research FET preamp', tied into a home-made PVC pipe/TV Twinlead
turnstile antenna (antenna cost--a whopping $10) and got good performance
from my setup. Commercially-assembled systems tend to cost major
$$$'s. If you're creative and resourceful, the hobby can be much less
expensive.

Incidentally, APT means that the satellite transmits whatever's directly below
it at the time. Therefore you will always receive images of yourself. If you're
looking for more "processed" pictures, then you'll have to assemble a
GOES-WEFAX system to pull in the geosynchronous satellites on 1691 MHz.
This involves a dish antenna, preamp(s), and receiver system to match. But
your demodulator will stay the same (some consolation). I was working on
GOES-WEFAX when I got out of the hobby. Basically-speaking, the
GOES images you pull down on 1.6 GHz were downloaded, processed

(political boundaries drawn in), then uploaded back to the satellite for general broadcast reception on 1.6 GHz.

2465. Modifying cordless phones for range

Newsgroup: rec.radio.scanner
Date: 1995-11-27 00:00:00 UTC
From: andyc@opus.freenet.vancouver.bc.ca
Message-ID: <49c4e4$dpr@milo.freenet.vancouver.bc.ca>
Source record: 245841

How does one modify a simple, cheap, 49Mhz cordless phone to have a range up to a mile? To my knowledge, it is not really the antenna alone that can affect the range, but the output power in watts? 1 watt is approx. 1 mile range? So this requires one to add some amplifier/power booster or something between the circuit and the antenna? Hmmm... cheap idea.

Also, what about FCC regulations, if the range goes beyond 2 miles? That should beat cellular.

There's a store in Phoenix called LinnTronics (sp?) that will custom-make
battery packs and chargers of virtually any size and configuration. If
you're looking for just regular nicads, Rat Shack sells them or I've seen
bulk packs at Price Club, etc.

hmm: you want a portable 49 MHz phone that's not readily scannable...

i would look for a nice little home, waaaaaaaay out in the desert!

really, the 900 MHz spread spectrum phones are so much nicer, and they
are damn near impossible to eavesdrop, their antennas are only about
an inch and a half long, and their range is much better.

i have the uniden 9100XP or some such model, with an extra battery
in the base unit charger.

{:-> don't plan to go to FL anytime soon. Thanks.

{:-> Mario

As far as I know there is no restriction for scanners in vehicles in Florida,
But I on;y lived there up until 92. The laws could've changed by now. The one
restriction that I was aware of then was if the police saw you showing up at all
the major accidents at the same time they did and saw the scanner they might
cite you for becoming a public nuisance especially if you get in the way of
their work.
I had several law officers friends that knew I had a scanner and had no problem
with it.

Let me know if you find out otherwise cuz I'll be heading back down that way
soon.

I have a Pro-62, and I like the scanner but you can't do any mods to it.
Rad Shack has been in contact with the FCC, and they've been told to make
their scanners "more mod proof".

Several police depts are going to 800mhz, so if your interested in that,
you might spend the extra cash.

Good luck, Dan

Yes! BUT it requires an additional modification. The usual Scout
mod brings out only the "data in" line and ground. You will have
to replace the mini-mono jack with a mini-stereo jack and also
bring out the "data out" line.

Regards,
Rolf

Try attaching a cb ant to the top of your discone...

2478. [HELP!] PA State Police repeater freqs. Wanted

Newsgroup: rec.radio.scanner
Date: 1995-11-27 00:00:00 UTC
From: scanman16@aol.com
Message-ID: <49dhj2$1h2@newsbf02.news.aol.com>

Hello,

I enjoy listening to Pa state police but I can only hear the base stations. Is there a repeater freq for the mobile units that I could listen to. Any info would greatly help. If anyone can help please e-mail me at Scanman16@Aol.com.

Thanks A Lot,
J.R.

Check out http://www.bluemarble.net/~percon/ for info. regarding their FCC database cd-rom. Grove Enterprises (http://www.grove.net) also sells a cd-rom freq. database.

Monitoring Equipment For Sale:

AR-2500 AOR Scanner/Receiver
-2016 Memories
-Over 60 Scan Banks
-Many limit memories
-Covers about 0-1500+ MHz ***NO GAPS AT ALL***
-SSB RX on HF freqs.
-Corse/Fine tuning knobs for HF freqs.
-Backlit Display
-NFM/WFM/AM toggle for each memory
-5k/12.5k/25k toggle for each memory
-Local/DX built-in attenuator
-Runs off 120 with included adapter
-Runs off 13.8V/12V with cig. plug
-Built in RS232 for computer interface
-Includes computer interface cable and
ScanCat software w/ upgrade privledges
-Includes collapsable/telescopic ant.
-Box/Dox
-Extremely small -- about the size of
a dual-band mobile (eg FT-5100)
***Price: $225 bo FIRM

Yaesu FRG-7700 Communications Receiver
-All band general converage receiver (0-30MHz)
-All mode (LSB,USB,AMN,AMM,AMW,FM)
-Noise Blanker/AGC toggles
-Digital Freq. and clock display
-Analog signal meter
-Runs off 120V or 13.8V
(A little big for mobile operation)
-Auto on, off, and sleep functions
-12 memories w/ OPTIONAL MEMORY UNIT
-Accepts wire ant. and/or 239.
-Phones/Rec/multiple ant. jacks
-Main tuning knob and Band/MHz dial
-Pretty good condition, a couple scratches
-Good, simple-to-use receiver
-Manual, No Box (Original Owner is a silent key)
***Price: $200 bo FIRM

If you are interested in these radios, or just have questions, please feel
free to leave me a
message through EMAIL REPLY ONLY. Respond to Cobra295@aol.com

If you're out of the local central NJ area, shipping will be required at YOUR
expense. All
items must be prepaid via a US Postal Service Money Order.

Email me for more details if necessary...

Well , Just on the 46-47 range I've taken a
cordless phone stubby antenna 3" and screwed it
into a modified bnc connector. Now I throw on
the search between 46-47 and BAAMMM ! Louder and
clearer than with the standard AOR8000 antenna or
my 2006 antenna or my 43 antenna or my 34 antenna.
I also have a long wire outside but that doesn't
do such a good job on the 46-47Mhz.

Just my .02 .
Richard Reider

You should be able to "hear", though not decode, with even a handheld
scanner. The Signal is very strong when a NOAA bird is overhead. I am
using a Pro2004 in the wide FM mode, with a home made turnstille, with
an older JFET preamp. On a good pass, I get about 15minuters of usable
image. You do not get a "good" overhead pass every day. Sometimes
you will have the "bird" make a low pass to your east then one orbit
later, a low pas to your west. Even on these passes I get a few minutes
of usable signal.
TS Keslo(spelling?) runs a sub bbs with the latest keps on it. If you
can not find the web site, drop me a note and I will post the full
electronic address. One thing to beaware of is to be sure that
you have the timezone set right in your tracking program. If you
get that out of sync tracking programs will give meaningless displays.
(and Yes I know I should be using a 40KHz if bandwidth instead of 75KHZ,
but it works pretty good the way it is)

+> -Wade

Wade,

I also wanted a PRO-2006, who wouldn't? IMHO, it's one of the best all
around scanners ever made.

Well, I just ordered one, and guess what, it's brand new in the box
and comes with a one year warranty! Top this off with a price of just
around $310 with the cellular mods already done and I think it's one
helluva good deal.

If you are interested in getting the same deal, point your Web Client
at <http://durhamnet.com/durham/scanners.html>. These folks are located in
Canada so they are immune to FCC regulations (well, to some extent - put
the flame throwers away).

They have all sorts of radio gear for sale and they have their own
service department.

Good luck,
John

>Has anyone done any experiments like running a longwire ant, or putting
>the base up a flagpole?

I have tuned my 6 meter rig to those freqs. I use a Ham Stick 6 meter
antenna. I have confirmed (on a great day) reception of a base unit that
was over two miles away.
Perhaps using equiptment designed for 6 meters would be helpful. I
haven't tryed it myself. I have switched to a spread spectrum cordless. I
can use it 1/4 mile away from my home when I walk the dogs and it only has
a 4 inch antenna on the base. I do not need to go an further than that.

Happy experimenting,
Ron

2486. Re: Southstar Helicopter frequencies

Newsgroup: rec.radio.scanner
Date: 1995-11-27 00:00:00 UTC
From: "Richard S. Danner" <richardd@dca.net>
Message-ID: <49cer5$f1o@dca.net>
Source record: 245862

They do most of their communications through Gloucester County
Dispatch Center. So they often use South Jersey Net - 154.265.

But their assigned freqs are:
JEMS 2 (JEMSTAR Aeromedical) 155.340
JEMS 3 (JEMSTAR Aeromedical) 155.280
JEMS 4 (JEMSTAR Aeromedical) 153.785

Its been awile since I've listened to them, but they were active
freqs the last time I heard.

Also, here are other local Aeromedical freqs of interest:
PennStar Channel 1 (U. of Penn) 155.385
PennStar Channel 2 (U. of Penn) 155.355
Skycare Operations 155.325
MedEvac Operations 155.220

Hope they help.

2487. looking to buy handheld scanner

Newsgroup: rec.radio.scanner
Date: 1995-11-27 00:00:00 UTC
From: ds107@fim.uni-erlangen.de
Message-ID: <49cki3$48t@news.rhrz.uni-bonn.de>
Source record: 245863

I've been thinking about what a cool hobby radio scanning would be, so now I'm looking for a really good handheld scanner. I came across Javiation's site (dealer in .uk, www.demon.co.uk/javiation) and checked out some of the models. What about the AOR 2700?

>[goodlookin' picture]

>Frequency Coverage
>500KHz-1300MHz with no gaps

Is there any cool stuff I'd be missing below 500KHz ? 1300MHz seems high enough..

>Receiving Modes
>AM, NFM &amp WFM.

uhh..??

>Memory Channels / Search Banks
>500 memory channels in 10 banks of 50
>10 search banks

Does a channel in this case simply mean capability of saving a frequency?

>Computer Control
>External computer control is possible via the optional CU-8232 interface.

Is that interface socket-on-scanner <-> rs232 serial port? And what can then be done via computer (that can't be done with the scanner alone) ?

>Size/Weight
>153mm(h) x 63mm(w) x 40mm(d)
>315 grammes

sounds pretty light to me, is that incl. current supply?

>Optional Accessories:-
>RU-2700 - Voice Record Chip that will allow 20 seconds of audio to be recorded
>and replayed

The thing has a digital sound output?? Or does that recording device just sample the analog output from a normal 1.5mm plug? Does the scanner have a headphone jack? I guess so, but it doesn't show on the picture and it isn't mentioned in the features list.. that would be a very important feature, just standing around with head(ear)phones on is a lot less conspicious than holding such a weird-looking device to your ear.

>SC-2700 - Soft Carry Case

there's a special offer right now, they're including the above for free in the below price

>Within the United Kingdom & EC 299.00 pounds including VAT

Is that price ollrite?? I guess I have to PGPeMail the guys about the shipping and payment stuff..

I'd be very happy for a few replies.

Hi. I'm in the market for a radio which will allow me to:

1) Listen to space shuttle / mission control voice transmissions (I'm near Livermore, California... over a small mountain from the SF bay area).

2) Pick up emergency information after a natural disaster (an earthquake, in my case).

Would a scanner or shortwave receiver be the best solution for me? Any suggestions about what I should look for will be greatly appreciated. Thanks!

Try Grove Inc(or interprises)
They have a real nice CD ROM that covers everything except
the fed gov freqs.
They also have the data in a state by state 1.44M floppy.
They have a web site and a toll free number. I don't have either
handy, if you can not find them just drop me an email and
I will send them to you.
Bob Grove is the publisher of Monitoring Times. And I am sure he
has the web address and 800 number in there.

: In fact, they are so damn strong that they make the 49Mhz walkie-talkies
: quite useless in the city.

: Andy

Those folks need to take the baby monitor out of the window. I go out
and see friends and most of them have these thing sitting right in the
window. Yuppie parents are so funny. They think they have one up on
everyone. They want it all. What ever happend to parents watching
children? You would also be suprised to know how well the mics pickup
what else is happening in the house! While the yuppie mom talks on the
cordless phone in the baby's room, her conversation ends up on two
bands. :-) I get bored too, and this base is a baby factory. I drive
around monitoring. :-)

What is even more amazing is that when the yuppie parents are told of
this fact they have one of two reactions. Thats illegal, or I did'nt
know that. Then, I asked to see the box and instructions. They where
still in the plastic bag! I showed them the fine print in the owners
manual that came with the baby monitor. They where shocked and removed
this pest from the neighborhood.

most.
This stuff is public knowledge. It's been in the papers, on the news, etc.
It's even in your library.
And, no, I don't know everything about everything. But I'm literate, and a
voracious reader. I don't waste my time reading crap novels. And, I tend to
understand what I read better than the average person.
There's nothing secret about the citizen who called in the Bronco's
location. There's also nothing secret about the fact that the cell call in
question was *to* the police. Heck, man, listen to the videos! They were
talking *to* the police! The call was made by the driver. This is no secret.
It's public knowledge.
Maybe a better question: why don't *you* know this?

I spoke to a good FRIEND of mine who is a Ft. Lauderdale Cop and he said that
when the scanner is laying on your seat, say using INTERNAL BATTERY power
NOT CONNECTED to the car in any way, THIS is LEGAL !!!!!

Once you hook up an external antenna or DC power, THAT makes it MOBILE and
THAT makes it Illegal.

He was Serious on this.

LL> Anyone else have any other solutions?

Well, I've seen several solutions, some better than others.
A less efficient antenna will work well.
Radio Shack sells a TV signal attenuator, #15-578. It adjustable. I use one
here in Phoenix on a PRO-2022.
RS also sells inline attenuators of fixed values.
Maybe there's something you can use here.

M> question of mine, as I don't plan to go to FL anytime soon. Thanks.

As far as I know, scanners are not illegal in Florida.
Scanners that are "installed" in vehicles are illegal. "Install" usually
means: using the vehicle's power supply; and/or using an antenna attached
to the vehicle (mag mounts count here); and/or the scanner is physically
attached to the vehicle.
A scanner simply sitting on the seat next to you, using it's own antenna and
batteries should be OK. (But, I'm no lawyer, either.)
Hope this helps.

Subject: CHP mobile units

>Anybody have ideas on how to better receive the mobile units of the C.H.P?

Get an antenna amplifier that connects to the base of your antenna.

Pro 43's aren't as sensitive as many other scanners are. 0.3 micro
volt in the vhf low band is acceptable and around 1.0 mv in the uhf
range.

That's why I took mine back.

CH>BF> Actually, the only cell calls the police monitored from that
CH>BF>particular white Bronco were made *to* the police from an occupant
CH>BF>of that Bronco. The police did *not* get the location of the Bronco
CH>BF>by any manipulation of data involving cell phones. A motorist called
CH>BF>the police, and reported seeing the Bronco. That's how they found
CH>BF>it. All other stories, no matter how authoritative, are fictional.

BZZZZZZT!!! WRONG! thanks for playing

CH>Just who are you? You seem to know everything about everything. How do
CH>you know how the police found the Bronco in question? Just curious.

the police had the cellular technicians trace which antennas (cells have
six sections per cell that maintain semi-directional patterns) were
being used to receive the cellular transmissions. this, in correlation
with the information from eyewitnesses, was used to get a general idea
of the location of the calls, then the bronco was spotted by a news
helicopter. the chase ensued.

Yha... Next to the window works very well. Taking one apart and doing
some work on the TX finals works well too. Not too well on the handset.

Good luck...

Subject: CHP mobile units

>Anybody have ideas on how to better receive the mobile units of the C.H.P?

Get an antenna amplifier that connects to the base of your antenna.

Pro 43's aren't as sensitive as many other scanners are. 0.3 micro
volt in the vhf low band is acceptable and around 1.0 mv in the uhf
range.

That's why I took mine back.

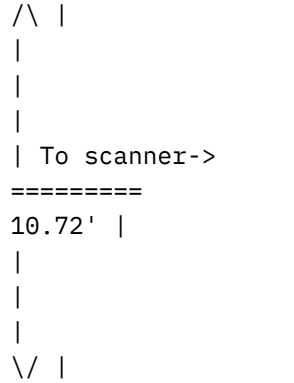
JB> others in this group found successful?

Antennas for specific bands are relatively easy to make. Some understanding of how & why antennas work is a necessity.
A discone antenna is very wide banded, but most made for the scanner hobby lose a lot under 50 MHz.
Inverted vee's and the 100 ft. wire are more short wave antennas than 43-49 MHz.
An amplified antenna amplifies *everything* coming into it, not just the wanted signals. If you can't pull the signal out of the noise without an amp, chances you won't be able to *with* an amp, unless you mount the amp right at the antenna.
A simple half-wave dipole for the 43-49 MHz band (with a 46.5 MHz centerpoint) would be 498.8/46.5 or 10.72 feet long (approximately; I have to say that because some here are super fanatic about exact lengths, and constant factors for element thickness/length ratios, but this will work fine).
Take a length of appropriate coax, and seperate the core from the shielding for 5 feet, and a little over 4 5/16 inches. This will give you the two elements of about the right length (10.72 feet). The other end of the coax will need to be long enough to reach the scanner. Hang one end of the stripped coax (either end, doesn't matter) high (the higher, the better. Check for lighting requirements if you get crazy with the height...). The other end should hang down. The coax coming from the center of this antenna "should" leave at a right angle for a few feet, if this can be arranged.



Something like that. (I'm no artiste.)
Hope this helps.

Does the software REQUIRE windows, or is it a good old dos utility?
I run OS/2 and windows utils like that can usually cause me more problems
then they are worth...

:>Here's some of the things it can do (geared toward the PRO-2004/5/6).
:>
:>Extends virtually EVERY aspect of the scanner to the computer's
:>monitor and keyboard. For example, a replica of the scanner's front
:>panel is displayed on the monitor along with a keypad emulator to show
:>the keys to be pressed as if you were operating the scanner in a
:>normal manner. As the scanner operates, the computer monitor shows
:>EVERYTHING that the scanner shows in its display! Not only can you
:>operate the scanner from the computer's keyboard, you can also operate
:>from the scanner as well. The CE-232 does not slow down the scanner
:>nor alter its peformance in any manner!
:>
:>* You can see & operate every function of the scanner from the
:>Keyboard!
:>* The CE-232 can download anywhere from one to 400 channels in one
:>session, either from you punching the keyboard, OR automatically from
:>a previously prepared list of frequencies. Manual or Auto-Programming
:>can include channel number, frequency, DELAY, MODE and LOCKOUT
:>functions as desired.
:>
:>* The scanner is fully programmable by the CE-232 in all modes, etc!
:>* The CE-232 will auto-log for an unlimited period of time, any and
:>all activity that the scanner encounters, whether in SCAN or SEARCH
:>modes. Each "event" (squelch break) is logged to a file as a line
:>item similar to:
:>
:>CHANNEL-FREQ-MODE-DELAY-LOCKOUT-FUNCTION-STEP-DATE-START TIMES &
:>DURATION
:>
:>Autologging can be turned on or off at will. Autolog files are
:>automatically opened and named with a date/time logo.
:>
:>Autolog files can be programmed back into the scanner's channel memory
:>at will with no manipulation or changes; just the press of a couple of
:>keys! This means that you can do a SEARCH function all night or day
:>while you're away and then come home and program in each new found
:>frequency quite simply, hands-off, in a matter of minutes!
:>
:>* An easy-to-use autologging feature is available for many purposes!
:>* You can....disconnect the antenna; set the ATT switch to the -10 dB

:>position and do a SEARCH from 25 MHz - 1300 MHz with the autolog
:>feature ON. About an hour or two later, you'll have a file that
:>contains just the BIRDIES in your scanner! Now you rename this file
:>to something like BIRDIE.LOG, and the next time you do a frequency
:>search, you can specify another CE-232 function called "BIRDCHECK",
:>which will prevent the scanner from ever locking up on a birdie (or
:>any other frequency that you insert into the BIRDIE.LOG). So, not
:>only can you EASILY make the scanner forever reject birdies, but also
:>pagers, data channels and other obnoxious signals that you don't want
:>to monitor!!!
:>
:>* The CE-232 discriminates against birdies and other undesired
:>signals!
:>* The CE-232 sports a LOOKUP function which shows a line of data every
:>time the scanner STOPS on a busy frequency! Your previously prepared
:>AutoProgrammer File will do nicely for this function, and therefore
:>will display whatever is in your database for that frequency! Great
:>for quick identifications of the signals received by your scanner!
:>
:>I use my autoprogram file in the lookup function, when the radio
:>stops on an active channel say 155,490 the following readout appears
:>in the window with the active channel highlighted.
:>
:>,1, 155.5950,,,, Dakota Co. Sheriff 1100-F1 Dispatch / 2 T/A
:>,, 154.1150,,,, Rosemount 3500 Police
:>,, 155.4900,,,, Dakota Co. Sheriff F-3
:>,, 154.7850,,,, Eagan Police 3300 dispatching Rosemount Pd/Fd
:>
:>* The CE-232 offers four user-definable switches which can be used to
:>control add-ons or other modifications that you may have added to your
:>scanner! Uses for these User Switches are virtually unlimited, but
:>might include turning on/off things like Automatic Tape Recorder
:>Switches; extra memory banks; Data/Tone Squelch and any other mods or
:>add-ons that you've developed or acquired. These User Switches are
:>controlled by the computer!

I'm asking Canadian dollars for starters..
Mr.Captain, Scanner Price Police......

Second, I'm not trying to rip anyone off. I'll sell
a scanner for what it is worth and for what I can get
for it I'm not a store. This is also a hobby for me.

It seems like your hobby is policing others.
What you said adds nothing it just may upset someone.
I can understand though that some people have nothing better
then to worry about what others do.

Your message could have been worded differently. Maybe next
time you may choose to add something instead of taking away
from the fun of using the internet.

The only thing I'm sorry for is spending this time to reply to
you instead of doing other things.

Hi Marc. The Livermore RACES (Radio Amateur Civil Emergency Service), a group of volunteers who provide emergency communications at the direction of a local government (city, county or state office of emergency services; police or fire department) I believe operates on the 147.120 MHz repeater. You could listen to this repeater using a "scanner" type radio. Other frequencies in your area that might have related information during a disaster situation include 145.33 (Mt Diablo). In the South Bay, 146.115 and 145.27 (South Penninsula) or 145.45 Mhz repeaters (on the ridge above Saratoga) all carry RACES communications during emergencies.

With a scanner, you might also be able to listen to local police and fire department communications (in some areas, they have moved to 800 Mhz systems that may be more difficult to monitor). Scanners are primarily for local communications; shortwave radio is usually for distant communications.

A shortwave receiver would be used to listen to communications that are occuring a long ways away. For example, if an earthquake occurred again in Mexico City, you can listen in on shortwave communications from that disaster area. You can find an example audio file of actual amateur radio emergency communications at our free web site, Ham Radio Online virtual magazine, at http://www.accessone.com/~vbook/hronline.htm

Good luck and have fun (and stay out of earthquakes!)

Proper alignment of the scanner..
Order the Service Manual 20-145/9145 from RS. It tells you how to align
the scanner and follow it STEP BY STEP.. Omit NOTHING and use only the tools
described...

That will make sure the RADIO is in top form.

However, in scanning Height of antenna is EVERYTHING! True, some db gain is
great, but db gain of a signal not seen is still dead air...

: I am in the market for a 43 -49 Mhz portable phone and prefer one that is not
: readily scannable. What should I look for? Features? Model Recommendations?

The best you can do in a 43-49 Mhz phone is "scrambled" which means that
they do a frequency inversion on the signal. It is not decipherable by
the casual listener, but it doesn't take a huge amount of electronics to
descramble it. The best consumer level secure phones will run over $200
and use spread spectrum technology in the 900 Mhz band. These are not
readily descrambled with a simple circuit.

Hi Charles:

The format is somewhat different.

I've never translated out a picture from the birds, so this is from
what I've read...

The picture is a continous strip, running east-west at 120 lines/min
Each line covers a couple of miles (I think). The signal has two
side-by-side images, with the inage type selected by time of day.

The Los Angeles area chapter of RCMA has a monthly meeting in the West Los Angeles area, usully on the first Wednesday evening of the month. The meetings represent a wide cross-section of interests and those present seem genuinely concerned with making first-time visitors feel welcome.

Doggone it, I can't find my notes right now....You (or others who are interested) can E-mail me and I'll send the details when I find them.

Happy Monitoring!

+>
Whether or not the cell freqs. can be restored depends a whole lot on when
the unit was manufactured. If it was buily after May of 94, forget it.

If it was built prior to May of 94, then you are in luck! It's an easy
mod. All ya gotta do is open it up and cut jumper L201.

Or you can just buy a new scanner that is already modified (that's right)!
Just point your Web Browser at <http://durhamnet.com/durham/>.

These folks are located in Canada and they have all sorts of radio gear
for sale. They also have their own service department. I just ordered a
brand new, in the box, PRO-2006 from them and they even do the cellular
mods for no extra charge!

I don't work for them, I'm just a satisfied customer.

2556. Euro vs American PRO-26

Newsgroup: rec.radio.scanner
Date: 1995-11-28 00:00:00 UTC
From: soren@delerium.engr.arizona.edu
Message-ID: <soren-2811951104540001@yuma7.rescomp.arizona.edu>
Source record: 245808

I'd love to buy a PRO-26, but this un-mod'able "feature" that they've added recently has me a bit annoyed. Javiation, however, _does_ sell the European version that's already 800Mhz capable, which would lead me to believe that unless they actually went through the trouble of independantly engineering _two_ different PRO-26 models (not very cost-effective) there's probably some relatively simple changes between the two.

I don't have a European 26 (yet) to compare with, but has anyone ever sat down and compared the two? Worst case scenario: if it's hardcoded into the chips (and they just mfgr'ed different chips instead of different radios) a simple board swap would probably work - but can you (or an appropriate European agent) order just _parts_ for Rat Shack scanners?

I don't have all the info, but if you are using standard telephone bells,
you'll need about 100VAC at 20Hz. That's close to what the phone company
uses to ring your bell.

You may have better luck putting some sort of DC buzzers or beepers on the
line, maybe in series with the phone line along with a good sized
capacitor, so when the phone is picked up, the beeper beeps until the cap
is charged.

By the time you get it all debugged and reliable, you may be better off
with a el-cheapo $25 set of wired intercoms.

Good Luck!

> or something between the circuit and the antenna? Hmmm... cheap idea.
>
> Also, what about FCC regulations, if the range goes beyond 2 miles?
> That should beat cellular.

First problem is using 49 MHz for anything "long range" - you will be competing for the channels with all of the other 49 MHz devices, including phones between/around your handset and base. I have trouble having either my handset or base upstairs where I live. Getting the extra height brings in interference from everyone else in town. If you add power (which you can't legally do), you would have to do it on the handset AND base - then you become a bigger source of interference for everyone else.

Then there is the FCC. Cordless phones are part 15 devices. You cannot modify them in any way to change their performance. No external antennas on the roof of your house, no extra amps, etc. About the only thing you can legally do to a cordless phone is replace/change the antenna with another that is provided by the manufacturer. This is why you don't see BNCs or other common antenna connectors on phones - they are not allowed to make it easy for a user to modify the antenna system under a part 15 type acceptance.

My suggestion would be to forget spending the time and money trying to illegally modify a 49 MHz phone - replace it with a 900 MHz SS unit. You would not get 2 mile range but it will be dramatically increased over what you have know.

2561. PRO-2006 Service Manual NOT AVAILABLE

Newsgroup: rec.radio.scanner
Date: 1995-11-28 00:00:00 UTC
From: bill@thd.tv.tek.com
Message-ID: <49g0o0$fg3@news.tv.tek.com>
Source record: 245813

I tried to buy a service manual for my PRO-2006, but Radio Shack said it was no longer available. They even called headquarters and confirmed it. The salesman said it had to do with the 2006's ability to be modified to pick up cellular phones.

I had to settle for a PRO-2005 manual instead. It's interesting that they still sell this one, since the 2005 can also be modified to pick up cellular.

Can anybody tell me what is the difference between the PRO-2005 and PRO-2006? I.e., are they the same on the inside but different on the outside? Thanks.

Believe it or not, this is true! The Florida law refers to scanners that are "permanently mounted" in a vehicle...so, your handheld is legal! Another interesting loophole is that the law only makes it illegal to have the scanner tuned to "authorized public service frequencies"...so, if your local police department is on 155.690 and you're listening to them on 155.685, it's legal!

Just another example of the government passing ridiculous, worthless, unenforceable legislation.

>better, has anyone tried putting lithiun-ion batteries in their scanner?
>This one I really want to find out about?

It is unlikely that general purpose lithium-ion batteries or chargers will
ever exist as over-the-counter consumer products.

The circuit requirements for safe charging and discharging preclude such
applications. Their best use is in "smart" battery packs, having integral
electronics, for components designed to be used with them.

Recent catastrophic events at Apple, and at the Sony LiIon manufacturing
plant, only underscore how dangerous these things can be,

>Yes, it is in Bill Cheek's second scanner modification handbook. It is NOT
>a trivial task. Unless you are good at soldering, and modifying cases for
>switches etc, forget it.

Cheek 3 has the surface mount version of the mod and you're quite right about the skill set required. However, the keyboard block memory controller (KBMC) detailed in Cheek's vol 2 works quite well with both the 2005 and 2006 and doesn't mar the case. It uses a two key sequence to switch the banks. if you use one channel to denote the bank selected, you don't even need an external indicator. Over Christmas, I've got two to do.

For those that want to try it, I picked up a few of the MOSEL memory chips required for the surface mount version and have several left over. $3.25 each plus $1 shipping for up to three. I'll even throw in some fine guage solder for use with it.

BTW, the slickest desoldering aid I've seen for surface mount homebrewers is the low temperature (200 degrees) solder specifically designed for those of us that do onsey and twosey repairs. Solder it to all pads and the chip just about jumps of the PC board without any trace damage. NEAT!!! If I remember correctly, MCM has it for $15 with enough to do a dozen or so of the 28 pad memory chips used in this mod.

Later...

-Covers about 0-1500+ MHz ***NO GAPS AT ALL***
-SSB RX on HF freqs.
-Corse/Fine tuning knobs for HF freqs.
-Backlit Display
-NFM/WFM/AM toggle for each memory
-5k/12.5k/25k toggle for each memory
-Local/DX built-in attenuator
-Runs off 120 with included adapter
-Runs off 13.8V/12V with cig. plug
-Built in RS232 for computer interface
-Includes computer interface cable and
ScanCat software w/ upgrade privledges
-Includes collapsable/telescopic ant.
-Box/Dox
-Extremely small -- about the size of
a dual-band mobile (eg FT-5100)
***Price: $225 bo FIRM

Yaesu FRG-7700 Communications Receiver
-All band general converage receiver (0-30MHz)
-All mode (LSB,USB,AMN,AMM,AMW,FM)
-Noise Blanker/AGC toggles
-Digital Freq. and clock display
-Analog signal meter
-Runs off 120V or 13.8V
(A little big for mobile operation)
-Auto on, off, and sleep functions
-12 memories w/ OPTIONAL MEMORY UNIT
-Accepts wire ant. and/or 239.
-Phones/Rec/multiple ant. jacks
-Main tuning knob and Band/MHz dial
-Pretty good condition, a couple scratches
-Good, simple-to-use receiver
-Manual, No Box (Original Owner is a silent key)
***Price: $200 bo FIRM

>hi, anyone know how to modify a pro 2021 to receive 800mhz ...if possible??
>thanks

It's not possible to convert this scanner to receive 800MHz. The internal components do not exist for this frequency range. Your best bet is (1) purchase a GRE (or comparable) 800MHz converter to use with the scanner, or (2) sell this scanner and upgrade to an 800MHz model.

Scanners in Florida are illegal in vehicles unless you posess a valid
amateur radio license. They are perfectly legal to be used in homes or
fixed locations without worry. I have not heard of anyone getting stopped
or hasseled with a mobile scanner on board, but I was asked once by a
police officer if I was a ham operator when he saw the scanner in my car.
Hope that helps. Frank Kiehner

2582. Mailing list for Middlesex, Essex & Plymouth Counties (Mass).

Newsgroup: rec.radio.scanner

Well folks, I've decided to take a whack at regionalizing the
coverage of some of the scannerings that go on around me. I've
created mailing lists for the scanner listeners from the counties
of Middlesex, Essex, and Plymouth here in Massachusetts.

To subscribe, send a message like this:
Middlesex:
To: scan-msex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Essex:
To: scan-esex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Plymouth:
To: scan-plym-request@nomad.n-reading.ma.us
[Message body]
subscribe

If you have an interest in another area of coverage,
I can create a mailing list to cover that area.

Just checked my Florida Statutes book and scanners that are able to receive
police transmissions are illegal in the state unless you are a member of
the police dept, fire dept, neighborhood crime watch or a licensed amateur
radio opperator. The section is chapter 843, section 843.16. Hope this helps.

>others in this group found successful?

Radio Shack sells a pair of extra long rabbit ears (~3ft. ears) on a
mounting stub. Buy a pair, clip off leads close to where ears meet,
cobble up a BNC connector. Attach directly to handheld or use BNC coax.

Extend rabbit ears and make length resonate at 43/46 mhz.
482/46=10.48' or half that 10.48/2 = 5.24 or 2.6' per ear.
482/43=11.21' or half that 11.21/2 = 5.60 or 2.8' per ear.
Ears MUST be extended in straight line with each other.

This works really well at pulling in signals. You can rotate and tilt
to select a particular conversation on the same frequency.
You can determine direction. When end of antenna is pointing at
source the conversation will completely disappear (nulled).
(can be confusing if you have reflected signals as well)

What was a staticy buzz turns into two distint clear conversations.

+>
The Pro-39's that can be restored were made prior to May of '94. There is
a date code on the back. You will need to remove diode D6.

As far as the Pro-43's go, the model #'s 20-300 can be restored, the model
#'s 20-300A cannot be restored. Again, look on the back.

Your mileage may vary.

> on a regular CB radio.

Actually there are "kiddie" and "low-budget" walkie-talkies in the 49 MHz range, some of which share freqs with cordless phones.

Radio Shack, Maxxon, and Standard have a nice selection of 1/4 watt FM 49 Mhz walkie-talkies. Many of them are headset types, and have 5 channels.

There are also the wonderful kiddie WTs on CD ch 14 also.

>There's a world of difference between the

James,

What you are hearing is common for some of the RS models. You are
listening to an image of the true freq. Some scanners will still pick
up the freq and you can listen (usually to one side) of the
conversation. The Dec '95 Monitoring times has an OK article on cell.

Also, the PRO-51 has limited capability when it comes to cell freqs.
No mods but it can be done from the keypad.

//Richard\\

Based on what I have read, unless you really value the computer interface and the alphanumneric display of the AR8000 (which the 7200 has neither), you should get the 7200 because of its superior RF performance. As you may know the 7200 is in short supply and we can probably expect an updated model from Yupi sometime next year.

A fella in Florida sent me a copy of their scanner law. If anyone wants me to post it, e-mail me.

BTW, it does specifically state that Ham radio operators are exempt from the scanner law.

Please note there is one very important addendum that must be added to the announcement two days ago. You can contact the software companies for information regarding the unlock code on the cellular band for the Pro-2035. However, the code can not be obtained by just anybody. By law, you must be able to prove that you work for the government, whether it's state, local or federal, and that it would be used for that purpose.
Thank you.
Kevin Cox

>Getting the extra height brings in interference from everyone else
>in town. If you add power (which you can't legally do), you
>would have to do it on the handset AND base - then you become a
>bigger source of interference for everyone else.

How would one slightly change the frequency of the phone? Put it
in between channels. Use a high quality phone to avoid splatter.

>Then there is the FCC. Cordless phones are part 15 devices. You
>cannot modify them in any way to change their performance. No

How the heck would they know if that antenna on your roof is for
your scanner or cordless phone?

Anyway, I'm in a country not governed by the FCC, so it doesn't
really matter. But is it really worth it to modify the base but not
the handset?

How would I build a good 49MHz antenna for my phone base? Right now
I'm using a 143cm piece of stripped coax with a piece of metal connected
to the shielding.

>My suggestion would be to forget spending the time and money trying
>to illegally modify a 49 MHz phone - replace it with a 900 MHz
>SS unit. You would not get 2 mile range but it will be dramatically
>increased over what you have know.

I would, but the cheapest one here costs something like $1,200
for the basic analog Panasonic flip-phone, which is one of the two
900MHz phones available here. The other is Samsung, which looks a lot
like the multiple-handset Bel-Tronics I've seen in ads. :(

thanks

2610. Need Help with Uniden SC150

Newsgroup: rec.radio.scanner

Hello all. I recently acquired a used Uniden SC150 'Sportcat' scanner.
The unit operates fine EXCEPT: there is VERY little volume from the
speaker. I get plenty of volume out of the headset, but I must press
the unit against my ear to hear anything out of the speaker.

I would like to attempt to fix it myself. Any ideas where to look?

Thanks in advance

What you are trying to build is a ring down line.

Equipment to do that isn't cheap, but is available.
I don't have the numbers handy, but try ANEITER or
NORTH SUPPLY both are big phone supply outfits, and
800 information should have numbers for them.

What would they base the legal case on? Doesn't sound right to me. It is not illegal to listen to trunked systems. It is only illegal to listen to cellular phone calls. Some companies are already marketing devices to extend a scanner that has the cell freqs blocked. Nobody can effectively take them to court.

If there is a will, their will be a device and Motorola, GE and the others can't do a thing about it.

>
>Thanks.
>
>--
>My MVT-7100 has earned every bit of my respect.This is the only
handheld Recv that I have ever seen that can be used for duplexing on 2
meters while in a mobil unit. I have also run comparsion test with the
AR-8K and found that the AR skipped over signals that the Yupi locked
on, even after swapping ant's and checking the sqlch the AR-8K would
still FAIL to detect the same signals. In my opinion the Yupi MVT is a
RECEIVER that can be used as a SCANNER quite well and the AR-8K is a
scanner that can "act" like a receiver.(Note: two trace cuts and two
jumpers and the 7100 is just as good as the 7200)

2615. Scanner Holder

Newsgroup: rec.radio.scanner
Date: 1995-11-29 00:00:00 UTC
From: brueger@infi.net
Message-ID: <30bc7567.4430360@allnews.infi.net>
Source record: 245660

I have a Radio Shack Pro-43 that I use mostly in a fixed position. I recently say a scanner holder advertised in the Grove catalog. This holder sells for almost $10. This looked like a great idea as the base of the Pro-43 is only about 6 sq inches and does not provide a great foot print, especially with the 24" whip antenna installed. But I thought that $10 was a little too much to pay for this item.

Well, the other day I was browsing around Walmart's automotive section and stumbled upon a "adjustable beverage holder." This gadget looked quite a bit like the Grove model and was only $3.95. It opens up to almost 5" and increased the foot print of the scanner x 2. The official name of the product is "Spill Master Junior."

I went one further and epoxied mine to a piece of Plexiglass.

Works great.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. A new law outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often poor.

Deluxe scanners can be controlled by a personal computer, although this feature isn't important to many scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden replacement models, the BC9000XLT and BC3000XLT, work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 has recently been replaced by the 1000 channel PRO-2035. The portable Radio Shack PRO-62 and PRO-60 are good performers. All four models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

ftp.cs.buffalo.edu (until Oct. 10, 1995)
garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Radio Guide, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions will contain selected business listings, too.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new 3rd edition is expected in early 1995. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and Kneitel's sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. *

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a | custom frequency allocation histogram, a 0 - 1,000 MHz | "spectrum analyzer-like" display showing spectrum usage by | the transmitters in the map coverage area. Send check or | money order payable to Bob Parnass for $25.95 for standard | or $29.95 for deluxe RadioMap report with histogram. | Include your name, address, and telephone number, along | with center location (nearest intersection of 2 streets, or | latitude & longitude) and mail to: Bob Parnass, 2350 | Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM | central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

Here is a tentative meeting schedule for 1995. All meetings will be held on Saturdays at locations announced in advance.

February 18, 1995 - Westmont Police Dept.
April 15 - Winnetka
June 17 - Naperville EOC, Aurora Ave.
August 19
October 14
December 9 - Philly's Restaurant, Rt 83 & 63rd St., Willowbrook

Bring a notebook.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call Radio Guide, published each year in 9
regional volumes by Hollins Radio Data, and sold at Radio
Shack and larger book stores for under $10. Police Call is
basically a computer printout of FCC license information in
the fire, police, local government, and conservation
services in two lists: by licensee name within state, and
by frequency. Later editions have included a few pages of
local airport and nonsensitive federal government
frequencies. The 1996 edition will contain selected
business frequencies, too.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local
agencies are listed for several cities. This differs from

Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Beyond Police Call, available from several sources including Radio Shack, covers the business, schools, and other stations not covered by Police Call, its sister publication. One volume covers the entire USA, but no call signs are shown. In 1996, Beyond Police Call may be replaced by expanded regional copies of Police Call.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guide. The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring

Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom

RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. *

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a | custom frequency allocation histogram, a 0 - 1,000 MHz | "spectrum analyzer-like" display showing spectrum usage by | the transmitters in the map coverage area. Send check or | money order payable to Bob Parnass for $25.95 for standard | or $29.95 for deluxe RadioMap report with histogram. | Include your name, address, and telephone number, along | with center location (nearest intersection of 2 streets, or | latitude & longitude) and mail to: Bob Parnass, 2350 | Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM | central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A

recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a

local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's

transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 110 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Several people have been pleased with Electronic Repair Center, in Franklin Park, IL, which repairs scanners for a flat fee. Call them at (708)455-5105 to find out their current rates. G & G Communications (telephone 716-768-8151) is another scanner repair company. This family owned company repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurments |
Dec 1995 - Radio Shack PRO-2040 |

Note: Reprints of Monitoring Times articles are available for $2.00 each from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin

19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end

circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good

scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line,

overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack

crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane

keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or

scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage. Cumbersome 100 channel bank size. Tuning knob. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO2022: Base/mobile scanner. Like the PRO2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd

for a base unit, which can clip the first part of a transmission.

PRO2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning.

PRO-26: Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. Audio suffers from small speaker.

PRO62: Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic

Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. The Plectron 500 series is less desireable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021.

2620. AR-8000 vs. MVT-7200?

Newsgroup: rec.radio.scanner
Date: 1995-11-29 00:00:00 UTC
From: shul9478@harrier.csrv.uidaho.edu
Message-ID: <49gccr$gio@newshound.csrv.uidaho.edu>
Source record: 245750

In a nutshell, I'm buying a scanner, and my decision has come down to a choice between the AOR AR-8000 and the Yupiteru MVT-7200. I'm looking for suggestions on which to buy.

My immediate uses would probably be both normal scanning (police, fire, phones, etc.) and shortwave listening. This would be my one and only scanner/receiver. Because of this, the widest covereage possible and the widest variety of reception modes is essential. Also, good handling of the incredibly crowded SW bands would be nice.

An external baseband signal output would be nice, so that I could hook up decoders/detectors for other modes (DX FM stereo/TV? SSTV? RTTY? ACARS? I know some of these can be decoded through the audio out, but I doubt the first two can). It seems the Icom 7100 has something like this, but it also costs $$$, and doesn't tune down into the SW bands.

A computer interface would be nice (is there one on the MVT-7200?), but it's hardly crucial as I don't have a computer at this time (just sold my Power Mac 7100/80, as I never used it).

I actually don't need the portability of a handheld, but for some reason there are no base/mobiles with the same features at the same price range. I'd love an AR-3000A or AR-5000, but that's pushing my budget.

I'm not sure I need the Scout compatibility of the AR-8000 either, but if I come into some money in the future (yeah right) I may have a use for it. Goes along with the "one and only scanner" bit--I want to have all the features I'll probably ever reasonably want.

I'm also interested in the other generic mundane details--selectivity, intermod handling, shielding, etc. I have all the specs per the company printed out, but I'd like a real evaluation by someone who has used and compared these two models.

Please, if you have any suggestions/opinions at all, post them here or mail them to me.

Thanks.

2621. Millenium batteries and Atlanta frequencies

Newsgroup: rec.radio.scanner

I have two questions.

1.

A local chain is selling MILLENIUM rechargeable batteries at 4 aa for $4.99 and an 8 position six hour recharger for $7.99
Sounds like a fair deal to me.
Are the MILLENIUM rechargeable batteries high capacity nicads or just fancy named regular ones? Why the closeout, did the company go out of business?

2.

Atlanta just moved to 27 800 MHZ frequencies for police and fire in preparation for the Olympics. I can't find my frequency CD. Does any one know what these frequencies are? Do you know how they are channelized?

I hooked by 2-meter mobile antenna to my handheld RS scanner and
it improved the reption noticeably.

The 2-meter mobile is on the car; 5/8 whip.

> unit. You would not get 2 mile range but it will be dramatically
> increased over what you have know.

Wow! 2 miles? I haven't heard anyone report they got anywhere near
that kind range out of a 900 MHz cordless. I've got the Tropez and
I've got the base in a 2nd story (top floor) apartment. It's a fairly
densly populated area with plenty of powerlines and such nearby, and
so my phone starts cutting out at about 150 yards or so, depending on
which direction I go. I suppose the farthest I ever was able to get
and still complete a call without lots of cut-outs wasn't too much
further than that. I don't doubt that you'd get better range in a
less electro-magnetically "noisy" clear area, but I *really* doubt 2
miles--let alone 1 mile!

Okay, survey time. Let's hear from 900 MHz phone owners out there:

1 What kind of phone (make & model)?
2 Describe base & phone environment?
3 Maximum comfortably-useable range?

I'll go first:

1 What kind of phone (make & model)? Tropez 900DX
2 Describe base & phone environment? 2nd/top floor apartment
3 Maximum comfortably-useable range? ~150 yards (varies by direction)

2627. Conversion for BC55XLT

Newsgroup: rec.radio.scanner
Date: 1995-11-29 00:00:00 UTC
From: Bob Beresh <bereshr1@pilot.msu.edu>
Message-ID: <49gqaa$vjo@msunews.cl.msu.edu>
Source record: 245757

Hey there.

My ol' Uniden is getting kind of drab. Is there any way that I could spruce it up by adding new frequency capabilities? Also, is the configuration of the board similar to the BC220XLT? I have a conversion for that model.

Thanks In Advance.

-Bob Beresh

Motorola has a press release on their web page WWW.MOT.COM in regards to the olympics. It seems that they will be supplying Digital Trunk radios and FLEX Two-way message pagers. I don't thing they can be monitored.

2631. Re: Code grabber?

Newsgroup: rec.radio.scanner

From: rprimak@aol.com
Message-ID: <49h96c$a5q@newsbf02.news.aol.com>
Source record: 245761

There was a news story on Channel 5 Chicago Il. in which they purchased a "code grabber" from a source they did not mention. In the story they were in a shopping parking lot and as people exited from their vehicles and used the keychain remote they would grab the code. They looked like they were probably 15-30 feet away and grabbed the code. They then went up to the person and showed them that they could open their door. They also did it with garage door openers. The article suggested that people purchase systems that automatically change the code every time it is used.

Uniden EXP-9100

Base is against outside wall of my house (wood, sheet rock, etc.) I live at the top of a large hill/small mountain. The only RFI that I can identify, I have created ;)

I have successfully used this phone while sitting in my truck in the parking lot of my local McDonalds. This is a 1/4 mile + . I had to sit very still once I found the right spot. But, it did work.
More effectively, I can use the phone when I walk the dogs all the way to the bottom of the hill (1000 feet +/-). I use the intercom to talk back an forth to my wife and /or monitor my child.
Both of these measurements would be direct line of site (+/- a few trees).

I have had three 49mhz phones over the years. I stopped using them because of security. I bought the EXP-9100 for that reason. I am still sometimes amazed by the distance I get from it.

I use the RS whip antenna for $10 for portable, a Scanner Beam from Grove for long haul/directional use and a Datong 370 active dipole for general use in my apartment to null out noise. They all work well for the cordless range with the Scanner Beam and Datong 370 giving the best signal to noise ratio, obviously at a higher price. Scanner Beam = $65 and Datong = $160.

Source record: 245771
Cross-posted to: rec.radio.scanner,alt.radio.scanner

> Atlanta just moved to 27 800 MHZ frequencies for police and fire ...

The news accounts contained more than little hype. Having given Motorola and TRW $37 million for a trunk and control center, you can bet they're pushing every favorable angle.
In reality, the public safety trunk only has twelve channels. The report of 27 includes the 10 channel city government trunk and the 5 ch Hartsfield Airport trunk, neither of which is linked to the new one (the airport is outside of the city and couldn't be integrated, anyway).

The new frequencies are:
858.2375 .4375 .7625 .9375
859.2375 .4375 .7625 .9375
860.2375 .4375 .7625 .9375
Repeater ID was heard on 858.2375, and 858.4375 includes a phone patch. All frequencies are active, but 860.2375 seems to have some noisy crosstalk. Fire is simulcasting on their old VHF frequencies, and the mobiles don't appear to have made the conversion yet.

Heard on the second day of operation: "Would someone go back to the precinct and get one of the old radios, so we can talk to the ComNet units?"

For reference, the other trunks are -
City government: 856.4625 .4875 Hartsfield: 851.9625
857.4625 .4875 852.4625 .9625
858.4625 .4875 853.4625 .9875
859.4625 .4875
860.4625 .4875

800 mhz trunking system got you down?
Well here's you answer,we are now offering FOR THE FIRST TIME ANYWHERE a complete solution to the real 800 mhz trunking system ,this is no phony scanner modification that you have been reading about that just defeats the data burst between transmissions,but we'll include this info free of charge anyway .

THIS IS THE BEST KEPT INFORMATION THEY DON'T WANT THE GENERAL PUBLIC TO GET THIER HANDS ON.

Start scanning better than ever before listen to :

* Police
* Narcotics
* Detectives
* Car to Car
* Talk Around
* Info Checks (NCIC,LOCAL,DMV,ETC)
* Swat & Swat Command Post
* Tranning Channels
* White Collar Crime
* Mobile Command Posts
* All Public Works
* Anyone Sharing this trunking system

This information package comes complete all you have to add is the GROUP ID'S AND FREQ.S that your local system is using.

INCLUDED is where to buy wholsale the radios, software, interface,programming cables.

Buy wholsale and Program the radios with the GROUP ID'S and FREQ'S and sell them by the hundreds, Make thousands of dollars Monthly.

This information has NEVER BEEN OFFERED ANYWHERE BEFORE be the first to get the inside scoop.

Ordering Information:
SEND SELF ADDRESED STAMPED ENVOLOPE WITH MONEY ORDER FOR $19.95 TO

NIEMAN ENTERPRISES
RT1 BOX 124D
RAYMOND,NEBRASKA 68428

YOUR PACKAGE WILL BE SHIPPED SAME DAY.

P.S.

Four of these for $4.99 is a STEAL! I've used Milleniums extensively in my scanners, handheld ham radios, Walkmans, etc. You can't beat 'em for capacity. Where are they selling them? I'd like to pick up some extras.

>Are the MILLENIUM rechargeable batteries high capacity nicads or just
>fancy named regular ones? Why the closeout, did the company go out of
>business?

Sadly, they are being discontinued because they are TOO good! Milleniums were being manufactured by a small company (Gates) in Gainesville, Florida. Eveready bought 'em out earlier this year...so apparently, they were making their product a little too well!

>I thought GOES stuff was all sent in HRPT format which is much more of a
>challenge to demod/decode/display than WEFAX. I think it could be done
>fairly easily with some of the newer DSP chips or a high performance MPU
>if you wanted to design the hardware yourself. A PC would be better.

Yes and no. There are multiple transmissions available from the satellites. NOAA polar-orbiters have HRPT transmissions in the S-band, and APT in the 137 MHz range. Most entry-level WX chasers start with the APT transmissions due to the relative ease of decoding (convert the audio tone amplitude-modulated transmission to light/dark FAX display). HRPT is more complex to decode.

The GOES satellites (geostationary) transmit both WEFAX on the S-band using the AM method, and a higher-res' transmission which most WX satellite chasers don't deal with--I think it's encrypted. I personally chased the NOAA APT images, then started working on the GOES S-band APT downlinks before I had to give up this hobby.

>If you want an excellent introduction to this subject, check out the
>"Weather Satellite Experimenter's Handbook" by Ralph Taggart. It's sold
>by the ARRL and is the definitive work on WEFAX hacking.

Yes, this is an excellent book. If you're interested in constructing antennas for this hobby (a good way to save money and learn in the process!), the ARRL antenna books are also good sources of information.

If you do this mod, I would suggest using a 16 position rotary BCD switch. Much nicer than dip switches and it mounts in a dip socket. I moved the 9V battery inside and mounted the switch in the battery compartment. The switch, part # RDIP-4, is $1 each or 10 for $9 (minimum order $10) from ALL ELECTRONICS CORP. 1-800-826-5432.

With all the sad stories about people getting ripped off or buying
broken garbage through the newsgroups, it sure is nice to have something
good to say about a business out there.

I just ordered and received my long wanted Pro-2006, and guess what,
it's brand new *in the box* and came with a one year warranty! Top this
off with a price of just around $310 with the *cellular mods already done*
and I think I got one _helluva_ good deal.

If you are interested in getting the same deal, point your Web Client
at Durham Radio Sales and Service <http://durhamnet.com/durham/>. These
folks are located in Canada so they are immune to FCC regulations (well,
to some extent - put the flame throwers away).

They have all sorts of radio and scanner gear for sale as well as
their own service and parts departments. They have all sorts of daily
specials and really go out of their way to please.

You can still get a cellular capable Pro-43 from them. I recommend
that if a cellular capable scanner is what you are looking to buy, you get
in touch with them quickly. They are bound to run out fairly soon.

A satisfied customer with no other interest in this company,
John

One more bit ... there are Amateur Radio groups that retransmit Space Shuttle audio. I think the NASA Ames Research Center radio club retransmits in your area around 145.58 MHz. That would be from near Moffett Field. You might not get it in Livermore. There may be other local frequencies in your area.

Good luck,
Ed, KF7VY

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as

identified in the table below.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35 33K	replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)

I have two questions concerning the new 9000xlt:

Does it have a true weather alert that is triggered in emergency
situations?

Does it have an aux on/off switching jack to control an external tape
recorder like the 8500xlt had?

Thanks!

It is more likely that his radio came up on the same freq as
you. He was within range of your handset, but not your base,
and vice versa. Therefore, you had a duplex link formed
between the two of you. His handset output appeared greater
to you than your base.

I orderd one three weeks ago and received it no problemo... If you really want it, get on the phone to Radio Shack National Hq in Ft Worth and request the manual from them. Explain that you HAVE a 2006, there is NO documentation on MODS in the manual, and you have a RIGHT to order the service manual. It is currenly part # 20-145/9145 printed 1990 revised 1992 with an addendum for the 2006-A where the only difference is the light switch shuts off the display instead of just dimming it. If that doesn't work, call the store and ask for the name of the district manager, and let them know you are hot... They will get it for you, believe me...

This tagline is shareware... Please send $10.00 to register

He most likely used a VHF radio. Your cordless phone sounds like it uses one frequency to transmit and one to receive. This person likely tapped into your receive frequency.

Hope that helps.

>range.
>
>That's why I took mine back.

You'd be better off by placing a receive preamp at the point where
the coax connects to the antenna. That way you are not increasing the
noise floor of your coax and just making the poor reception you have
now louder.

You can find mast mounted preamps at ham swapmeets and for sale in
magazines like PopComm. You can also get them in kit form.
Sorry - don't have any brand names to suggest.

2685. Police 10-x codes

Newsgroup: rec.radio.scanner
Date: 1995-11-30 00:00:00 UTC
From: sipps@ix.netcom.com
Message-ID: <49ke5c$2df@ixnews4.ix.netcom.com>
Source record: 245691

Hi all,

Does anyone have a list of what the police mean when they say 10-10, etc. I know what 10-4 means, but that is about it! I used to have a list that I got from a Radio Shack in Vermont, but that was several years ago and I have lost it. Someone told me that different police departments use different codes, but is this true?

Thanks!
sipps@ix.netcom.com

2686. Re: Pro-2006 mod for 6,400 channels?

FORGET IT!

The easiest way to do it is to get in touch with the folks that will
do it for you!

Mark Persson has a complete list of mods ready to install that no
longer require the dip switches. It is accessed by the keypad!

He can be contacted at the following address...

Mark Persson
1369 Lombardy Blvd.
Bay Shore, NY 11706

To give you an idea, the 1meg SRAM mod for the Pro 2006 (25,600 chans)
costs :

SRAM Chip : $20.00
LinkALL module : $95.00
Install with LEDs!: $35.00

$150.00
Plus shipping...

It gives you a super clean install, and a really nice memory boost...
$20 to install, and like I said, no dips, rotaries or other unpretty
things..

This tagline is shareware... Please send $10.00 to register

>
> REC.radio.scanner in Toronto, ont. seems to have more messages.

All newsgroups are not available on all server systems. Some
systems do not carry "alt" groups, while some may not carry "rec"
groups, for reasons of internal policy.

If messages to multiple groups are posted with one entry, then it
is possible for newsreaders to recognize identical cross-posts and
not present it for reading more than once. But not all newsreaders
can do that. And someone may post the same message to each group
separately so there is no infomation in each that the other exists.

(If you are using a threaded newsreader like trn, there is a command
to delete unmarked articles and it will also search for cross-posts
to mark as read at the same time.)

2690. CDF units heard in Phoenix, AZ

Newsgroup: rec.radio.scanner
Date: 1995-11-30 00:00:00 UTC
From: drice@enuxsa.eas.asu.edu
Message-ID: <DIvF9t.63s@ennews.eas.asu.edu>
Source record: 245696

Does anyone know which ranger district a CDF (California Department of Forestry) unit numbered 6672 would belong to, and were approximately its response area would be? I heard that unit (obviously CDF based on the terminology they were using) on 154.400 MHz (which I beleive is the repeater INPUT frequeny). I know this sounds crazy, but this isn't the first time this has happened. I heard another 66xx unit calling "Central" a few months ago on the same frequency.

If anyone knows where this unit might be located, please let me know. They must be on a REALLY high mountain for me to be able to hear them all the way in Phoenix, AZ!

2691. 900 mhz cell and cordless health concerns

Newsgroup: rec.radio.scanner
Date: 1995-11-30 00:00:00 UTC
From: lch@birch025.cray.com
Message-ID: <1995Nov30.102100.22737@driftwood.cray.com>
Source record: 245697

Some months ago there was a lot of hype about the dangers of using cell phones, concerns that they caused brain cancer. The hype has died down but it started me thinking. If a hand held cell phone with .3 watts (I think) of power is cause for concern what about 900 mhz cordless phones?

How much power do the 900 mhz cordless phones put out? It seems that if there is any legit reason for concern it would be tied to duration and frequency of use and I would think more people would spend more time on 900 mhz cordless than on cell phones?

2692. Re: Improving 43-49 Mhz Reception

Newsgroup: rec.radio.scanner
Date: 1995-11-30 00:00:00 UTC
From: horak@convex.com
Message-ID: <49l6tk$kbt@eugene.convex.com>
Source record: 245698

>>Has anyone had any success with improving 43-49 Mhz reception?
>>jbadger@cray.com

One of the previous followups suggested rabbit ears which work well. Another way to improve your 30-50 scanning experience is to make a 10 foot dipole (468/frequency in MHz = length in feet, so 468/46.8MHz which is in the cordless phone base band, equals 10 feet) out of Radio Shack speaker wire (24 feet of #42-2478 on page 23 of the 1994 catalog). Also, get a RCA to BNC adapter. Take one end of the wire and cut off the BNC, leaving a few inches of wire on it (you'll use it later). Take the 23 feet or so of wire and seperate the cut ends about five feet apart so that it stretches ten feet end to end. Mount this dipole on the wall, ceiling, or somewhere up off the ground. You may find slightly more signal strength if you mount it vertically. The rest of the length is so you have plenty of wire to run from the antenna to your scanner. Of course, if you need a longer wire run, use the 50 foot wire. Since 30-50 is a pretty low frequency, cable losses are minimum. You'll be amazed at the improvement in low band performance from this inexpensive antenna. Now, for that other BNC end piece you cut off, seperate the wires until you have about three inches of wire on each side. Use an ohm meter to determine which wire is the center lead. Completely cut off the ground wire and leave two or three inches of the center conductor wire. Get another RCA to BNC adapter and you have an average antenna for cellular and more importantly, a good antenna for very strong signal situations where a regular antenna gives you overload. Since this short antenna is almost worse than a rubber duck, it is ideal for use at concerts, finding wireless mikes, etc. without picking up other interference.

Message-ID: <49lbt3$7qm@maureen.teleport.com>
Source record: 245699

I am selling an AOR model AR1000XLT handheld scanning receiver.
This unit is great! It has 1000 channels, 10 scan banks,
and covers 500Khz thru 1300 Mhz with *no gaps*. AM, FM, WideFM all
covered.

This unit is in perfect working order. (The paint has rubbed off along
the case edges revealing a smooth black plastic case.) The clear
protective plastic coating is still over the keypad and LCD crystal, so
no scratches are there.

This unit runs on standard AA batteries, or rechargable AA and has a
built-in recharger.

This is a very sensitive unit with super sudio, and a great squelch
circuit.

I am selling the scanner and its antenna for $285 shipped via 2-day
priority mail anywhere in the lower 48 states.

>
>Anyone care to comment on Opto's model 2810 or 3300 frequency
>counters, especially as they compare to the Radio Shack counter?

I use the 3300 and am quite happy with it. One thing though, I always
get stray readings on the 250MHz scale. I tried tuning my scanner to
one of those freqs, but I got nothing. Intermod?
The HOLD feature is indispensable. The radio shack counter doesn't have
it, but there's a mod for it lying around.

>Can anybody tell me what is the difference between the PRO-2005 and
>PRO-2006? I.e., are they the same on the inside but different on the
>outside? Thanks.

As far as I can tell, the PRO-2005 has a "Dimmer" switch for
changing the intensity of the panel backlight, the PRO-2006
has a "Light" switch for turning the lamp on and off.

Now, try ordering a front escutcheon for a PRO-2005. They
claimed the other day that it is No Longer Available.
I didn't have time to pursue it due to work deadlines,
but next week I will likely discover that the front
escutcheon for the PRO-2006 is still available, and
I will order one and it will fit.

Cheers!

I would always operate under the assumption that there is a threat of interception. However, the reality is that it doesn't appear to happen, at least not often enough that it has become a topic of discussion. I bought my AOR from Javiation and received it without incident. You should be aware, however, that you will likely have to pay customs of $35-$45 on the unit, which the UPS person will collect at your door.

I did this mod to my 2005 when Bill Cheek's first modification book came out. His second book had some enhancements on how to select the 16 different blocks of 400 channels via the keypad instead of dip switches (like I did).

Although I don't think I have ever had more than about 2500 channels programmed at any one time, it is great for putting in mass FBI, DEA, and Mil Air entries.

You need to be comfortable with soldering surface mount components if you are going to do this.

S>stations. Is there a repeater freq for the mobile units that I could
S>listen to. Any info would greatly help. If anyone can help please
S>e-mail me at Scanman16@Aol.com.

As I remember from the last time that I wrote about the PSP, which was a while ago, they use a two channel simplex system without repeater. Somewhere, I have a list of frequencies that they use, and I think it pairs the base and mobile channels. Reception of the mobile channels will require a good antenna system, unless the mobile is relatively close to your locations. Let me know if you are interested, and I will try to find the information.

What you want is called a "Ring-Down" circuit. A ring-down circuit is one where phone B rings when phone A comes off-hook and vice-versa.

This requires a ring-generator, as well as telephone bias (12-48 Vdc). There are commercial ring-down devices available, and maybe even a schematic exists in a magazine such as Popular Electronics or Radio Electronics.

: >challenge to demod/decode/display than WEFAX. I think it could be done
: >fairly easily with some of the newer DSP chips or a high performance MPU
: >if you wanted to design the hardware yourself. A PC would be better.

: Yes and no. There are multiple transmissions available from the satellites. NOAA
: polar-orbiters have HRPT transmissions in the S-band, and APT in the 137 MHz
: range. Most entry-level WX chasers start with the APT transmissions due to
: the relative ease of decoding (convert the audio tone amplitude-modulated
: transmission to light/dark FAX display). HRPT is more complex to decode.

: The GOES satellites (geostationary) transmit both WEFAX on the S-band
: using the AM method, and a higher-res' transmission which most WX
: satellite chasers don't deal with--I think it's encrypted. I personally chased
: the NOAA APT images, then started working on the GOES S-band APT
: downlinks before I had to give up this hobby.

: >If you want an excellent introduction to this subject, check out the
: >"Weather Satellite Experimenter's Handbook" by Ralph Taggart. It's sold
: >by the ARRL and is the definitive work on WEFAX hacking.

: Yes, this is an excellent book. If you're interested in constructing antennas
: for this hobby (a good way to save money and learn in the process!), the
: ARRL antenna books are also good sources of information.

I've seen ads for an antenna that has 4 vertical strips which are
twisted. I think it's called a helix. Is there anywhere to get plans for
this?

I have built a Lindenblad which seemed to work better than the one from
Taggart's book. These both worked great for 2 meters, too.

From: pm3751s@acad.drake.edu
Message-ID: <1995Nov30.130532@acad.drake.edu>
Source record: 245722

I am an avid scanner listener/radio buff and am always looking for new listening. There are quite a few shopping malls in my city (Des Moines, Iowa) which house many major department store chains. I was wondering if anyone would happen to have any of the frequencies for Loss Prevention activities in any of the following Des Moines/Nationwide stores: Sears, JC Penney, Montgomery Wards, Kohl's, Younkers, etc??

Thank you in advance.

Paul

From: jrosariojr@aol.com
Message-ID: <49k749$gcs@newsbf02.news.aol.com>
Source record: 245727

Big difference. First the the 62 is made by GRE freq are 30-999 with Fm radio gaps, Tv audio gaps, military air gap, cellular and programmed steps for the band. The 26 is selectable bans step from 5, 12.5, 25. It has a light delay the 62 doesn't. Has a automatic programmer which fills in a bank on the freq is pick up. I could go on and on but the 26 is well worth the money.

The battery for my Panasonic cordless died a few months ago (i.e., could
not hold a charge for more than a few hours). I zapped it with 13.8V at
8 amps (!). It's still working perfectly after a few months. Guess those
dendrites still do form.

Hello,

That is Rural Metro Ch4.. Mostly an on-scene frequency.. Dispatch is
154.370, which you probably have.. Central is dispatch. There are no
CDF Repeaters that will get there, but Onyx Pk with San Bernadino
County Fire.. Everything else by the border is fairly low leval like
1,500 to 4,000 feet or about.

I heard that unit (obviously CDF based on the
>terminology they were using) on 154.400 MHz (which I beleive is the
>repeater INPUT frequeny).
I heard another 66xx unit calling "Central"

I didn't catch the original post, but I thought I'd throw in my $.02. I went to a store last night called "Famous Brand Electronics" in the outlet mall near our home (you know, those malls in the middle of nowhere near an interstate highway that sell name brand goods at cheap prices). They had a decent selection of Bearcat scanners at good prices, when I compared them to ads in Popular Communications. Some examples: BC147XLT for $69, BC148XLT for $79, BC-350A for $99, and BC860XLT for $149. I'm not sure if these were reconditioned units or not. They also had some cheap Grundig SW portables, too. So you may want to check out your local outlet mall for this store.

Actually Realistic makes 3 models of the pro-26 (that I know of). A U.S.A. (blocked frequecnies), Europe (simular to the U.S.A. model but unblocked), and a Canada (Unblocked but the scanner changes from WFM, FM, and AM at different frequencies than the other two when doing a search).

I have the Europe verson and love it.

I have a Uniden 9100 and think it is great and while I can detect the frequency range that it is using, I can't find any useful signal. Definitely 'not readily scannable'. I think I paid about $200 at Wal-Mart.

I have a friend who just picked up a real nice Uniden 25 channel cordless phone with speakerphone that works in the 46 Mhz range and uses frequency inversion scrambling. That effectively garbles the signal for most of the scanner population. The cost was $79 at Circuit City.

On the otherhand, when I switched my AR-8000 from NFM to lower SSB, I was able to make out the conversation reasonably well. There is also an inverter kit from Ramsey Electronics for around $40 or $50 that will reinvert the audio and recover the original signal. My friend decided that it was secure enough for her purposes but your mileage may vary.

If money is no object, the Uniden 9100 is very nice. The 9200 is a two line version with a dialing pad and speaker phone on the base unit -- even nicer :-) The Uniden 46Mhz unit is also nice; especially, when you conider that you get the phone, a speaker phone with the usual intercom features, memory dialing, etc. for $80. The range on the 46Mhz unit is considerably less than the 9100 and the sound quality is not quite as good. You just have to decide how secure you want to be.

Message-ID: <49olrc$qkf@freenet3.scri.fsu.edu>
Source record: 245541

I have a Alinco DJ-580 that I use for the ham bands but also in the business bands. I have a new customer who uses uses 464.xx with a repeater input at 469.xx. It requires a "DPL tone of 465" I am told. How is this different than a sub audible tone. My radio only has sub audible tones to 250.3 hz. I can't trigger the repeater without the tone. Any suggestions? Am I on the wrong track?

I have had good results using this radio with other customers in both VHF and UHF business bands.

Thanks Bruce.

>different police departments use different codes, but is this true?

These codes typically vary from agency to agency depending on where
you live. They range from 10-1 to 10-99. Here are some of the most
common.

10-4 received or copied
10-6 temporarily out of service, usually doing paperwork
10-7 out of service
10-8 in service
10-9 repeat last transmission
10-10 temporarily out of service for a short break
10-15 transporting prisoner
10-19 going to the station
10-20 your location
10-21 telephone call
10-34 meal break
10-42 your home (typically, the officer might say, "I'll be on a 34
at my 42")
10-60 subject has no warrants
10-61 subject has felony warrant(s)
10-63 subject has misdemeanor warrant(s)
10-97 arrived at destination

Additionally,

220 mental/emotional problems (they will say "subject is acting
very 220")

960 traffic stop (most departments will just use their designator
and say traffic like, "2 boy 5 to radio, traffic" they will then give
a location, license plate number, and vehicle description.)

961 same as 960 but this one that something is suspicious and they
request another unit for backup.

Code 1 standard response, no rush
Code 2 lights and sirens, life or property in danger
Code 3 generally the same as code 2 but a quicker response.
Code 4 situation under control
Code 6 Officer need assistance (this is rarely used, normally,
someone will just say "officer down" or something to the effect.)

HBD has been drinking
DUI Driving under the influence (pretty obvious)

One last thing, when you here a beeping tone, that means that the air is closed for emergency traffic only.

Other than the mobile extender frequency, 154.905, you're pretty much out
of luck. It's not your scanner, it's just the fact that the mobile units
do not use that powerfull of a radio.

>I've seen ads for an antenna that has 4 vertical strips which are
>twisted. I think it's called a helix. Is there anywhere to get plans for
>this?

There's a periodical called _The_WeatherSat_Ink_ that had plans for
the quadrifilar some months ago. Properly built, it's suppose to be
a pretty decent antenna.

>I have built a Lindenblad which seemed to work better than the one from
>Taggart's book. These both worked great for 2 meters, too.

Another WX sat' chaser built the Lindenblad, and he had good results as
well. The Lindenblad gives you more gain at the horizons where the
satellite is the furthest from you. The trade-off is that the Lindenblad
is more complex to build than the turnstile. Either way, you *WON'T*
spend a fortune on PVC pipe, and that's always good news!

Patent infringement....

The proprietary trunking formats in use today, as well as the "open standard" APCO 25 trunking protocol, all incorporate various manufacturers intellectual property that must be properly licensed.

Ed,

Check out Durham Radios Sales at: <http://durhamnet.com/durham/>. They
have the best of Radio Shack goodies (Pro-2006, Pro-43, etc...) for sale
at IMHO, excellent prices. I just got my Pro-2006 from them for $310 with
free shipping.

>list that I got from a Radio Shack in Vermont, but that was several
>years ago and I have lost it. Someone told me that different police
>departments use different codes, but is this true?

In Iowa, 10-10 is a fight. Every state has their own 10 code set. At one time their was a push to make each code standard, but now many departments are dropping 10 codes for standard English or Singals and Codes. LAPD has standardized the use of Code. California is known for their 11 codes and others. I know some states publish a list of their codes that you can ask you local State Police/Highway Patrol for a copy.

It took me about a month to learn 10 codes for Iowa and I work as a cop. They can be useful and sometimes a pain. Our 10 codes can change from county to county. I once responded to a call in another county thinking it was just a person with car trouble and found out that they had a special code for a fight. Nasty situation.

From: tetsuyan@aol.com
Message-ID: <49mmup$ias@newsbf02.news.aol.com>
Source record: 245555

Hello, all.

I found two Uniden BC200XLT units for sale at a local store, and I 'd
like to ask people in the know for their opinions about this scanner.

Is it a good buy for around $210?

How does it compare to, say, BC2500XLT and BC3000XLT?
(What it has or lacks comparing to these?)

Should I rather get a BC2500XLT or BC3000XLT?
(Understanding they're about $150-$200 more...)

Thanks very much for your input.

Oh, btw, I'm completely new to the scanning world. 8-)

+> Phil ->--

Phil,

A I understand, they are an authorized Radio Shack distributor, so it
is a Radio Shack warranty. Any problems could be handled by any Radio
Shack, but you may have problems going elsewhere because it is "modified".

I imagine they would sell you one that wasn't modified, but then you
could just buy a Pro-2035 if that's what you wanted.

I understand that they are selling these fast and when the well runs
dry... Well, you understand.

They also have cellular capable Pro-43 handhelds and AOR AR8000's (I think that's what it is) for sale. Check out the site for yourself. The have a mirror site up, but I don't remember the URL offhand. You can find it on my page though (see below).

> or some other restriction?

The only restriction I'm aware of is for for "installation" in a vehicle or place of businees, unless you're law enforcement, press or a licensed amateur radio operator. They don't really define "install" - so I don't know if a handheld powered by a cigarette lighter or connected (by BNC) mobile antenna is illegal. If anyone's interested, I'll post or e-mail them the complete text of the Florida law.

Otherwise, they're totally legal so far as I know...

2759. FCC License Data Sources

Newsgroup: rec.radio.scanner
Date: 1995-12-01 00:00:00 UTC
From: bill@thd.tv.tek.com
Message-ID: <49nbs1$pvr@news.tv.tek.com>
Source record: 245592

[last changed 22-Nov-95]

Changes preceeded by "|". Please e-mail corrections and additions to me.

The latest version of this file can be accessed via anonymous ftp to
agora.rdrop.com in /pub/users/billmc/fcc_sources or via my web page at:
http://www.rdrop.com/~billmc

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists.
The FCC master contains a wealth of data about every non-government license
in the United States (over three million records). Most of the sources
listed contain a subset of this data, although a few contain all or nearly
all of it. Government licenses are not administered by the FCC, and the
data is not available to the public.

If you are interested in purchasing FCC data, you might want to consider
forming a co-op of people in your area to share the cost. As far as I can
tell, this is legal since the information is in the public domain.
However, the software supplied to view or manipulate the data is usually
copyrighted and must be purchased separately by each user.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major
cities cost extra.) A 70-mile search costs $178. The data is provided on
floppy disks and is available in ASCII columnar and comma-delimited
formats.

CET does not provide data for licenses that do not contain specific
geographic coordinates (i.e., mobile-only systems) or specific operating
frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of
the 30-mile radius. I calculated mine from a USGS topographic map I
obtained at a local nautical supply store. Alternatively, you can obtain
the coordinates for your town from the University of Michigan's geographic
name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For
my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $103, and the mapping version is $173.

Floppies are available by state for $43 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can | be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. The US Index CD also covers the entire US but comes with a more powerful database manager. Regional CDs cover subsets of the US but provide more detail about each license. Finally, the mother of all databases is the seven-CD Frequency Set, with data organized by frequency.

Spectrum costs $37, the US Index is $87, regional CDs are $107 each ($465 for the complete five-disc set), and the Frequency Set is $1515. Data is updated quarterly (the latest data is from Nov 94). PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), Pergrim@aol.com (email), or | http://www.bluemarble.net/~percon/ (WWW).

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state, covering all services and all frequencies. Data is updated approximately every six months (last update was Dec 94).

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity
| discounts available. Fully working shareware copy (FCC200.ZIP)
| downloadable from their BBS at 360-871-4228 (below 9600) or 360-871-4591
| (9600-28.8k) ScanWare Associates can be reached at 360-698-1383 (voice)
| or 360-698-8207 (fax).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

The easiest way to do that would be to use a storage scope and a
reciever for the signal you're trying to grab. The garage door
reciever will neatly decode everything, and spit out a repeating bit
stream for sampling.

Hand-held cell phones typically go up to 3.0 watts.

> How much power do the 900 mhz cordless phones put out?

I think cordless phones transmit with only a tiny fraction of a watt.

It cost me 4.50 Canadian for the Chip and 3.50 for the switch. a few
cents for wire and solder. I found it easy to do but the instructions

were inclear. (what pins to solder where) Once I figured it out I
could do it in 20 - 30 min.

It is in fact a difficult task for one who does not have some
background in electronics or atleast in using a soldering iron.

Very very careful soldering is required and you can easily damage
you radio.

I'm in Toronto Ontario and I could do it for you if you are local.

HAHAHAHAHAHAHA!

Man, did someone sell you a bill of goods! HAHAHAHA!

For your information there are over 1400 cell CLUSTERS in LA county,
and, Sounther California has the largest density of CELL towers IN THE
WORLD -- PERIOD!

I have worked at the installation and debugging end of CELL since it
started, and there is ONLY (currently) one way for a map coordinate to
be drawn, and that is by signal strenth sample at the tower in
question relative to AT LEAST one other tower, but usually requires
all three of a triangle... . The strength CAN NOT give an accurate
direction off of the single tower's individual set of antennae. That
is not the intention of the unit, and it was never designed to track
from a single tower...

So, with that much in place, take a look at what must have happened...

First, THE BRONCO was SPOTTED!! No ifs ands or buts...

Given the approximate location THEN cell cowboys could begin to
triagulate based on the known trunking of the cell frequencies...

That would probably take about an hour just to find someone at the
tech department that could even loacte the given information.

Next, you would need to know which unit of the cell the phone was
using.. The easiest way to do this is to begin a 'forced cell
calibration' signal to a few towers to see if the signal in question
could be forced to jump to another cell tower.. If that happens, THEN
you could begin a true triangulation of the call.. And, by the way,

since there is no current way to 'derail' the cell switch to a cell that won't jump, if the call in question jumps again, all is probably lost...

But, if you go back into the archives of the media coverage, you get the real answer... It was an ANONYMOUS cell call to 911 that spotted the bronco LEAVING the area of the cemetary!
Geeze...

This tagline is shareware... Please send $10.00 to register

Why would you concern yourself with how much power a little thing like
that put out? Have you ever heard of any RF or Radio Engineers getting
cancer or other maladies? The current scare about RF and health is
hogwash. There's no study ANYWHERE that can conclusively link RF
exposure to disease. Now, maybe if you're dubm enough to peer into the
focal point of a Cu band uplink dish...

FYI: I work in the Broadcast field and regularly dose myself with RF
radiation in much greater quantities and over wider frequency ranges
than the average consumer. My medical check-ups over the last 8 years
have been perfect! Matter-of-fact I recall reading somewhere that the
OM's that built WLW (500kW) AM have been dying of OLD AGE lately.

Source record: 245610

The 200xlt is a great scanner. If it doesn't have the cell range included in its coverage, there is a fairly simple mod to restore it. There are a few other mods that make the 200 even better and more efficient. Though it is a bit bulky compared to many of the newer radios on the market, it is practically bulletproof. OK...maybe you want want to use it in a shoot out, but it is considerably more sturdy than many others.

As for the price, I'm sure you'll here all kinds of stories and opinions. Here is something actually based in reality. $210 seems to be a fair price for a NEW one. I have purchased 2 different 200xlt's in the past year or so. I bought a used one for around $140 with some accessories and most recently bought a new one at Wal*Mart for $179.95. I will warn you, you have to search the Wal*Marts as their prices don't seem to be all that consistent. I checked nearly 20 different stores before I found it at this price. Also, I do believe a mail-order liquidation company called Damark is currently selling factory reconditioned models for around $175. I have a friend who purchased one and it looks brand new. It even had the cell band coverage and the battery drain problem fixed.

All in all a good radio...

I used to own a BC200 and I agree that it is the kind of scanner that you would want in your shirt pocket if you're doing a Gary Cooper scene from High Noon. I'm surprised to hear, however, that they are still available (new ones that is). I'll check the local Wal_mart to see if there are any on sale. Are the new ones modifiable in the same way as the old ones (i.e. clip the diode)?

If you every think about using UPS to deliver a radio, remember the following:

I ordered a radio from the a distributor in Oaklahoma City, OK on November 22, 1995. Due to the Thansgiving holiday, this package was picked up (for delivery) by UPS Monday, November 27, 1995 (evening pickup). According to UPS, this package was supposed to be delivered Wednesday (11/29/95). (Two business day delivery). On Thursday when my wife called UPS-Houston they informed her that a delivery attempt was made a 6:02 p.m. 11/29/95. Since my wife works at home (all day) and I was sitting on my couch watching the news at that time and date, I suggest the UPS driver on my route was either (1) lost, or (2) mistaken. NO attempted delivery ticket was left. (One of the UPS Customer Service personnel suggested to my wife, that it must have "blown away". I'm sure they use this one a lot. To get this package delivered, My wife called UPS customer service several times and some of the personnel have been quite rude to her. I had hoped this package would be delivered Tursday night 11/30/95 and waited outside for the UPS truck for about two hours. Still NO delivery! On Friday (12/01/95) My wife called the UPS Houston office and filed an "official" complaint and the UPS Customer Service person told her that a UPS Supervisor would call her with in a few hours. Guess what *NO CALL* from UPS. A few weeks ago I sent a package from Houston to rural Oregon via Federal Express and it arrived safely in 18 hours and I could track it's every move via the internet!

The moral of this story is: If ANYONE needs a package delivered in a timely manner I urge you to use caution with dealing with UPS. Some of their customer service are rude, they do not return promised phone calls, etc. I recently read a horror story in the December 1995 RCMA "Scanner Journal" concerning a RCMA member who tried to sent a Gateway computer back to Gateway for service and UPS LOST the 66 pound "Gateway Cow Box" it was packed in. Guess what ? This guy lost a ~$2000.00 computer due to these guys! So make up you own mind but to me - It' just not worth it!

Pay a few extra dollars and insist on using Fed-EX or DHL !

Here's the text from the Florida Statutes, pardon the word wraps:

843.16 (1994)

843.16 Unlawful to install radio equipment using assigned frequency of state
or law enforcement officers; definitions; exceptions; penalties.

(1) No person, firm, or corporation shall install in any motor vehicle or
business establishment, except an emergency vehicle or crime watch vehicle as
herein defined or a place established by municipal, county, state, or federal
authority for governmental purposes, any frequency modulation radio receiving
equipment so adjusted or tuned as to receive messages or signals on frequencies
assigned by the Federal Communications Commission to police or law enforcement
officers of any city or county of the state or to the state or any of its
agencies. Provided, nothing herein shall be construed to affect any radio
station licensed by the Federal Communications System or to affect any
recognized newspaper or news publication engaged in covering the news on a
full-time basis or any alarm system contractor certified pursuant to part II of
chapter 489, operating a central monitoring system.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any
city, any county, the state, the Federal Bureau of Investigation, or the Armed
Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any
state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department

of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use
of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of
any county in the state when said vehicle is to be assigned the use of
frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of
police of any city in the state when said vehicle is to be assigned the use of
frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person
participating in a citizen crime watch or neighborhood watch program when such
program and use are approved in writing by the appropriate sheriff or chief of
police where the vehicle will be used and the vehicle is assigned the use of
frequencies assigned to the county or city. Such approval shall be renewed
annually.

(3) This section shall not apply to any holder of a valid amateur radio
operator or station license issued by the Federal Communications Commission or
to any recognized newspaper or news publication engaged in covering the news on
a full-time basis or any alarm system contractor certified pursuant to part II
of chapter 489, operating a central monitoring system.

(4) Any person, firm, or corporation violating any of the provisions of
this section shall be deemed guilty of a misdemeanor of the second degree,
punishable as provided in s. 775.082 or s. 775.083.

Gates Energy Products, the manufacturer, is gone. Their consumer battery
assets were purchased by Eveready.

Too late to cash in on the Millenium lifetime warranty, I'm afraid.

The nicads are medium-high capacity; I remember hearing the AA's are
something like 750 mAH.

In> This information has NEVER BEEN OFFERED ANYWHERE BEFORE be the first
In> to get the inside scoop.

ROFLASTC!!!!!!

What a crock of crap.

This information has been offered everywhere before!

For free, not for your feeble attempt to grab 19.95.

If the system is a Motorola system, buy a motorola radio, either locally or
mail order. (Plenty of used ones out there)

Buy a RIB, and cable from your local Motorola dealer, along with the
appropiate software.

Then, using the, as you put it, the group ID, and the freq, (the ID is the
hard part to get) and there you are.

If it is Ericcson, use their equipment. LTR, use EFJ. Etc.

Of course, this is one of the reasons that they found Gass guilty in the
recent federal court case.....

Get a clue. Sheesh.

... Catch the Blue Wave!

>I'm sure it would be a popular group. ....Comments?
>
>--

I'm all for it... it would be a good reference point to which we could direct people with questions about freqs. I've got a few lists that I could add... anyone else out there have any lists for anywhere? (Knowing full well that of _course_ people out there have lists for all sorts of areas ;-)

As to the subject of how to do it, I think that the subject line would be best used to indicate the state/location and/or business or entity to which the list(s) pertain(s). Then, if the posts are archived anywhere, anybody could go ftp searching there at the archive site for the lists, and not have to continually ask for lists on the main news group. (Of course I know this will never cease, and I myself have resorted to doing just that when I haven't found what I'm looking for at a site.)

I think there are already some ftp sites that archive lists to some extent, but being able to have a group for posting them (and being able to post changes) would be good.

(Do I hear a motion going out for a Request for Vote to form a new rec.radio subgroup?)

2803. Re: Itinerant Frequencies

Newsgroup: rec.radio.scanner
Date: 1995-12-02 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <49q5id$cm7@hopper.acm.org>
Source record: 245484

> ... a master list of the itenerant frequies and the color codes ...

Actually, only three of the 'color dot' frequencies (151.625, 464.500 & 464.550) are designated "itinerant". The rest are either GMRS or limited to 2 watts. In addition to the three dot frequencies, the itinerant designation also includes 27.49, 35.04, 43.04, 151.505, 158.400, 469.500 and 469.550.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 Red Star 467.900
Black 462.625 Blue Star 467.925
Orange 462.675
Brown 464.500
Yellow 464.550

"Dot" stickers are used by the manufacturer or distributer to indicate the frequency of otherwise identical transceivers. They are often found in rental inventories and on construction sites. Note that the 462.xxx frequencies are for GMRS.

It's even more fun when Mommy and Daddy play around in their bedroom, which just happens to be within shouting distance (and Mommy tends to be loud sometimes <g>) of the baby monitor that is turned up. Maybe they want to broadcast their attempts to have a brother or sister for Junior (or their practice sessions). Even better when that was Daddy's voice but Mommy sounds different (You know, younger and an awful lot like the babysitter).

2813. 3000xlt AM, NFM, WFM=?

Newsgroup: rec.radio.scanner

You need to ask the local department that you listen to. Most departments have their own 10 codes or sugnal codes. Most all are different! Most agencies will give you a copy, just get with their crime prevention or community affairs dept. Lots of them keep some at their "front desk"

Tom
AM is used for the aircraft bands you have in your scanner (108-136 Mhz.) and/or 200-300 Mhz. the freqs the military uses. AM is usually about 6 khz. wide. NFM is narrow band FM and is what 95 percent of everything else is on your scanner, it is usually 12.5 khz. wide. WFM is what the broadcast bands use (radio-tv) and it is usually 25khz. wide. I hope that helps.

If you live near a large transmitter, or in an area with lots of
intermod, the 10db attenuator is very handy.

>> why is the same messages on both sometimes?
>>
>> REC.radio.scanner in Toronto, ont. seems to have more messages.

rec.radio.scanner was designed to replace alt.r.s. The idea was that
Usenet folks that enjoy scanners were not "real" radio enthusiasts unless
they had a rec.* group. Plus, many businees do not carry the alt.*
hierachy as it is not considered relevant.

Of course, alt.* groups rarely die once created, so for the past 2-3
years there have been parallel groups. I've tried to "boycott" a.r.s,
hoping it would die. This is, of course, futile. :-)

Source record: 245505

But you did not adjust any of the advanced features of the AR8k that
are available only on an 8k. This would have rendered similar
performance. I find few people are even aware of the impact these
have...
PLL LOCK DETECT
SQELCH DETECT
LEVEL MODULATION DETECT
LEVEL VS SQELCH WAIT
AUDIO WAIT
all values can be set in millliseconds

You can make the AR8k to be any kind of radio you want.
No other radio I am aware of in a handheld scanner allows you to
second guess the design engineer and change it in software to make it
do what you want.

Read the manual and try again before you post about the AR8k. ;>)

Source record: 245507

I live in a large metropolitan area where multiple police departments are assigned to the same frequency, but use different PL tones. These police departments are typically about 30 miles apart. Since the Pro2006 does not have PL tone capability, by enabling the -10db attenuator, I can use the squelch to eliminate the lower strength signal, and am able to monitor my local Police department.

You have no idea what your saying.

One unit is a transmitter, the other is a reciever. If I put the
transmitter in the childs room, and return to my room, and my child crys
during the night I will hear it better than I might have without, but all
you are going to hear is a crying child. Do you get the point. You might
hear me cooing my baby or talking to him while he/shes asleep but Thats
it...

2836. Mall of America scanning

Newsgroup: rec.radio.scanner
Date: 1995-12-02 00:00:00 UTC
From: "Scott Van Aartsen (KB0ULA)" <svanaart@nwciowa.edu>
Message-ID: <49p56h$4m9@news.iastate.edu>
Source record: 245517

Just for those of you thinking about using your scanner at the Mall of America in Bloomington, Minnesota, USA -- It is not looked upon favorably by the mall security. If they have reason to believe you are monitoring their frequencies, you will be asked to take the scanner out to your car, and lock it up -- or to leave the premises if you don't have a car. (personal experience) Pretty strict, I think, but that's their business -- it is a private place of business, and they can have whatever rules they want, I guess. A friend of mine also said they do not like camcorders there. (something about merchants being afraid you will copy their ideas, copyrighted logos, etc . . .)

So my advice if you take something out of the ordinary in to MOA: be discrete.

DR>Does anyone know which ranger district a CDF (California Department of
DR>Forestry) unit numbered 6672 would belong to, and were approximately its
DR>response area would be? I heard that unit (obviously CDF based on the
DR>terminology they were using) on 154.400 MHz (which I beleive is the
DR>repeater INPUT frequeny). I know this sounds crazy, but this isn't the
DR>first time this has happened. I heard another 66xx unit calling "Central"
DR>a few months ago on the same frequency.

DR>If anyone knows where this unit might be located, please let me know.
DR>They must be on a REALLY high mountain for me to be able to hear them all
DR>the way in Phoenix, AZ!

DR>--
DR>David Rice
DR><drice@asu.edu>

well, cdf doesn't have any units that >I< know of numbered that high. i
can check my records...nope. the highest unit # group is the 46xx
range, which is the king city dispatch group, southeast of salinas. all
the dedicated cdf repeater inputs are in the 158-159MHz range, wiht
outputs in the 151MHz range. 154.400 belongs to Antelope/Malibu fire
district in Los Angeles County, which has probably changed now since
most of LA fire is on 800MHz.

As of Sunday 26 Nov, Atlanta police are on the new public safety trunk. Fire is simulcasting on their old VHF frequencies, and the mobiles don't appear to have made the conversion yet. There was a write-up in the 24 Nov Atl. Constitution, with no more than a dozen factual/technical errors <g>.

The new frequencies are:
858.2375 .4375 .7625 .9375
859.2375 .4375 .7625 .9375
860.2375 .4375 .7625 .9375

Monitoring during the first week of operation shows that two frequencies (859.7625 & 860.2375) were locked out by the third day (apparently technical problems / interference) and 858.4375 is reserved for phone patch unless the system saturates. Add the control channel (alternating between 858.7625 and 859.2375) and they're left with eight usable channels. Given the load the old system handled, they may have some problems.

Heard on the second day of operation: "Would someone go back to the precinct and get one of the old radios, so we can talk to the ComNet units?"

Hand helds (ie flip phones etc.) put out 600mw. I don't know exactly,
but I think 900MHz cordless units put out `100mw(?). I have a
Panasonic KXT9000, and so far no tumors <G>

P>What do you guys think about starting a group devoted to postings of
P>freqs only ?
P>Something like rec.radio.scanner.freqs ? I'm not sure how to do it,
P>but I'm sure it would be a popular group. ....Comments?

Personally I am against it..Recently another of my News Groups divided
into 3 different areas...I hate it. It is not as if there are an
abundance of messages here concerning only that matter. I get 20-30 new
messages a day only about 1/4 of which are asking for FREQ's. However
if people want to do it there has to be a vote on it by the current
readers of this news group and then a request sent in. We could get
really picky and have:

rec.radio.scanner.mods
rec.radio.scanner.freqs
rec.radio.scanner.forsale

and then of course just,
rec.radio.scanner for ALL that other info that doesn't fit into one of
the above categories.

: I live in one of the worst areas for intermod in the world. Every scanner
: I've owned has had it with the exception of my 2006. It's the best so
: far. Casey.

Some scanners work better than others in certain areas. However, the IF frequencies can vary on different models so one can't state that "Scanner X is bad for intermod.". A great scanner at one location could be unuseable in another.

Just something y'all might want to take into consideration.

Cheers!

UPS lost two ICOM handie talkies that I ordered a few years ago. All they could show was that the package was picked up, and then they didn't know what happened. After I got the run-a-round, I tried to file a complaint. They lady on the phone actually said that they could not file a complaint on what I was complaining about!!!!!

Now every time I order something, I insist on Fed Ex. They know exactly where the package is.

Look in your receiver manual for the IF frequencies. Subtract this
frequency from the frequency that you are hearing the cell call on and
you will find the actual transmission frequency.

> looking for suggestions on which to buy.

Thanks to everyone who posted and/or emailed me info. I've decided that even though it's reception is not quite as good, the AOR8000 is a better choice because of its features and support. Now the question comes if I will ever have the money to buy one... I'm having to sell stuff now as it is to pay for my car and my new apartment. Ah well, that's life.

Now this is really delving into the hypothetical, because I don't even have a computer, but what is the best computer interface for the AR8000? I'm only aware of two, the (AR8000INF I think) one from EDCO and the one (CX12 something or other) from OE. Which features do each have? I've been net surfing, and haven't seen any product information on these devices, but I have heard hints that it may not be possible to modify the band plan with the INF. The INF does seem much smaller, though--more suited to portable scanning hooked to a palmtop computer.

2868. Re: 10-codes of police

Newsgroup: rec.radio.scanner
Date: 1995-12-02 00:00:00 UTC
From: dg715@cleveland.Freenet.Edu
Message-ID: <49p0ea$itv@madeline.INS.CWRU.Edu>
Source record: 245575

There are several sets of 10-Codes that different police departments use. While some are similar, some aren't even close. I spent 10 years working with one department that used one set of 10-Codes while a bordering city's police department used a totally different 10-Code...even though we shared several radio frequencies, and even though we worked with them on a daily basis, we had to use plain English when we talked to each other, because the differing codes caused confusion. For example, one code might mean I'm taking a lunch break while the same code across the street meant my shift is over and I'm going home. If two officers wanted to meet for lunch and used the codes, one would think the other can't make lunch because (s)he's going home!

Anyway, all this gabbing simply to say there's more than one 10-Code.

2869. Mailing list for Middlesex, Essex & Plymouth Counties (Mass).

Newsgroup: rec.radio.scanner
Date: 1995-12-02 00:00:00 UTC
From: mtiernan@world.std.com
Message-ID: <DIz22E.Lq5@world.std.com>
Source record: 245576
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Second posting...

Well folks, I've decided to take a whack at regionalizing the
coverage of some of the scannerings that go on around me. I've
created mailing lists for the scanner listeners from the counties
of Middlesex, Essex, and Plymouth here in Massachusetts.

To subscribe, send a message like this:
Middlesex:
To: scan-msex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Essex:
To: scan-esex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Plymouth:
To: scan-plym-request@nomad.n-reading.ma.us
[Message body]
subscribe

If you have an interest in another area of coverage,
I can create a mailing list to cover that area.

Hi;

I've tried many antenna's for scanning. Being a ham, I built several different designs, and purchased, still more. For the money, the best omni-directional scanner antenna made, IMHO, is the Monitenna, by Channel Master. It comes with 50 ft. of coax, and is available from Amatuer Electronic Supply at 1-800-558-0411, for 39.95. Some Radio Shack Dealers, also carry it. Hope this helps.

If what is said here is true, are places such as Radio Shack & the like
illegally selling police scanners, and could they be charged if they
sold a scanner to someone who isn't an ametuer radio operator, or a
police or fire person? Any lawyer would take the case for free.
Email any serious responses as our server screws up occasionally.

>1,500 to 4,000 feet or about.

Hmm, that's odd. I do have R/M Ch4 programmed into my scanner (that's how I heard these myserious units), but I'nve never heard R/M refer to dispatch as "Central" (they call it "Alarm"), and I've never heard an R/M unit called 6624. They also used other California terminology such as saying "Water Tender xx", where Arizona departments usually just call the unit "Tender xx". Maybe it was just an exceptional case of troposhperic ductin, but whatever it was, it was nothing like anything I have ever heard on R/M Ch4.

>I saw an ad for a Uniden Highway Patrol Alert scanner that says it monitors
>"secondary" highway patrol frequencies that are always transmitted by a
>patrol car, thus alerting you to their presence. Anyone know what these
>frequencies are and how they can be monitored?
>
>Thanks ----- Bill
>
The 'secondary' frequencies are probably mobile extender frequencies, used by Troopers to communicate through their mobile unit using a handheld. Freqs. vary by state, and sometimes by region within a state. Usually in a band far removed from the primary base-mobile freqs. Ex: Illinois on VHF-Lo uses 155.505 for mobile extenders.

Not a sure fire way to be 'alerted' to their presence. Some units are activated only when the officer exits his vehicle. Some (Wisconsin, for example) seem to be on continuously. And I'm sure they can be de-activated manually. Read recently that at least one state doesn't even provide these units to it's officers. (Which one(s) are those, BTW?)

They're low-power as well, so a 2-3 mile range would be maximum.

In short, they can be monitored on your run-of-the-mill scanner. Just be aware of the characteristics and limitations. Let us know what states you need frequencies for, and I'm sure someone will post the info.

At least in the USA, there are parts of the spectrum in which both
AM and NFM transmissions may be heard. The 138 - 144 MHz band
is one example where you will find military aircraft using AM
intermixed with military base communications using NFM.

JS> Cut out the orange wire wally, I can't find it on the schematic.
JS>---

how far the frequencies "skip" during solar activity really has nothing
to do with how far you can hear a mobile unit locally. i can hear the
chp base stations in my area up to 80 miles from their point of
transmission (up on some of the highest peaks around here). being able
to pick up the mobiles is an entirely different story. friends and i
have gone so far as to load up the frequencies into a lowband maxtrac
and connect the unit to an outdoor lowband base antenna (i believe it
was an AS model, it was 2 years ago) on a 20 foot mast above the
building. reception was no better than 20 miles, with 15 miles being
about the average reception distance for a mobile unit. even with the
best setup, without some altitude one is just not going to hear the
mobiles that great.

the characteristics of the 42MHz range are fairly similar most of the
time to 27MHz. i remember having days where i couldn't talk to a mobile
2 or 3 miles from my house, but could shoot skip to arkansas with little
effort. it's all the atmospheric conditions and the 100w mobiles chp
has (25w on the bikes) still don't help that much.

last but not least, does anyone here remember what the radiation pattern
a 1/4 wave antenna with a perpendicular groundplane is? last i checked,
it was still one that radiates the majority of the signal upward at
approximately a 25 degree angle from the radiating element.

I recently purchased a used Bearcat 890, and I seem to have a baffling problem. When the antenna is disconnected, I can hear the police frequencies (470-480 Mhz.) When I connect the small collapsible antenna whip it came with, the transmission gets interrupted. I originally thought the problem was the antenna so I bought an external antenna (Monitenna) and the same problem persists. With the external antenna I get better reception on the aircraft band (117-136 Mhz.) but the mid frequencies are still disabled.

Here's some more information that might be relevant to my problem:

1. I live in NYC and there might be strong microwave interference.

2. My antenna is on top of 2 10' masts that it shares with a regular VHF/UHF/FM antenna.

3. This antenna is parralel to a 30' high CB antenna

4. I'm running 2 50' coax cables connected with pl239 connectors with a BNC adapter at the scanner end.

If anyone has any ideas on what can be done to get better reception, please, please get back to me ASAP..

Thanx in advance!

Receptionless in NY,
E.R.

For the past week there has been a weak beeping signal on King County
Police F-3 153.755 Mhz.

This is a Special Operations channel used most often for search and rescue.

The communications section has been busy with flood/disaster comms all week
so I haven't bothered to try and call them to see if they knew what it was.

I considered that it could be a malicious jammer, or possibly a tracking
xmtr on a suspect's vehicle.

Anybody know what/where this thing is?

Kerwin
Seattle, WA USA

Hello all,

A friend of mine has a "bunch" of Yaesu Dual Band Radios which he would like to sell at a great price. He purchased them for the emergency response group which he is envolved in and has decided to sell them and get radios which do not have as many functions and features. His policy appears to be "the simpler the better" for emergencies. Anyway, each radio is under 2 years old (some only 4 months old) and comes with the following:

Yaesu FT-530 Dual Band HT
Yaseu Standard 2 Watt Battery
Yaesu Hi-Power 5 Watt Battery
Yaesu Rapid Charger (for both of the above batteries)
Yaesu Standard Battery Charger
Yaesu External Speaker/Mic
Yaesu Standard "Rubber Duck" Antenna
Antenna Specialist's Dual Band "Rubber Duck" Antenna

There are Eighteen (18) Radios, and each of them have had the out-of-band modification done by a local Southern California Dealer at time of purchase. He is asking $460.00 for each radio with the listed accessories in quantities of 5 or more (hoping they can be of good use to an amateur group, etc).

Any interest may be directed to me via e-mail at: asplund@scf.usc.edu

>> 900 mhz cordless phones?
>
>Hand-held cell phones typically go up to 3.0 watts.
>
Mobile and Transportable Cellular Phones operate at a power level of
3.0 Watts Maximum. The Cellular network determines what required power
level is needed and then sends comands to the phone to step its power
up and down by 4db steps. This produces a range of power steps between
4.8 mM and 3.0 W.

Portable Cellular Phones have a maximum power output of 600 mW. Most
cellular phones operate at 480 mW. 480 mW is 8 db below 3 W. In a
mature Cellular network most phones are told to operate at power levels
between 70 mW and 480 mW.

I have not seen any proof that these signal levels are harmful to
anyones health.

I currently own my second Uniden "BearTracker" scanner. The BCT7 is a
great scanner as it is pre-programmed with most common frequencies
selected by state.
The "secondary" frequencies you mentioned are the repeater or
"extender" frequencies used by transmitters in the patrol car itself.
The BearTracker monitors these frequencies and measures their strength
to sound an alarm when the car is within 3 miles. The traffic on these
frequencies is no different than what is on the main frequencies and
repeater, so the only benefit of monitoring is to determine if a patrol
car is in the vicinity.
The BearTracker scans over 1100 Highway Patrol frequencies, and
unfortunately Uniden does not provide a list of freqs scanned.

>response area would be? I heard that unit (obviously CDF based on the
>terminology they were using) on 154.400 MHz (which I beleive is the
>repeater INPUT frequeny).

Ok I'm gonna take a stab at this.....

154.400 is in use in Los Angeles County for fire dispatch...they use
engine and station numbers...so that is out.

Next we go into Riverside County and I find a listing for Murrieta and
Indio Fire Departments on 154.400, Indio is listed as being on a
repeater and has unit numbers starting with "4" Murietta is listed as
having unit numbers starting with "63" but has no repaeter
listed...that's not to say it aint so. lets just say that Murietta may
have changed unit number designations since my list was published(1995
Police Call So.Ca.Edition).
So if I was to take an educated guess I would say you are hearing
"ducting" from somewhere in Riverside County. There are NO CDF
designators in the 6600 range that I am aware of. I think you are
hearing something off of San Jacinto Peak near Palm Springs.

As for the "terminology"...well Riverside County Fire is a CDF
operation...but the last time I listened they ID'ed as "Perris" but
with all the CDF influence in that county most Fire Agencys may use
the same terminology.

It's not that unusual to pick up VHF-HI that far away when the
conditions are right. I often hear US Coast Guard Group Long Beach on
VHF-HI during the summer months......and I'm almost 500 miles up the
California Coast in Santa Cruz Ca.

So like I said...these are only guesses.....
I'm sure I will be corrected if I'm wrong....

Fairlane Town Center Mall security use 461.650. It can be interesting to monitor, but hearing about all the crap that goes on there makes you either want to stay away, or go there with a MAC-10 & show the mall security people how to really solve some of the problems with the young & old punks.

Most of the punks causing trouble there are...of a race other than the security staff... and the punks use that & the hysteria over racial issues to their advantage.

Anyway, the big 'anchor' stores at the mall (Hudsons, JC Penney, etc.) will also have their own security freqs in use.

Tom
The only reason I can think of why they would allow you to switch
manually, is if you were searching for strange transmissions you would
be able to change modes to help you ID what it is your listening to. It
is
usually considered a plus to have as many manual controls as possible
on a scanner, i.e. mode, bandwidth, vfo for freq., etc.

2926. Info needed on cordless mods

Anybody tried to do modifications on their cordless phone?
Changing the antenna on the handset and base would increase the range, is this true? If so, what kind of antennas are you using and gave good results. What is the range?

Thanks for your time! =)

->>What do you guys think about starting a group devoted to postings of
->freqs only?

->(Do I hear a motion going out for a Request for Vote to form a new
->rec.radio subgroup?)

If so, I second it wholeheartedly! The primary reason I read
rec.radio.scanner is for frequency info. All the receiver-related topics
tend to get in the way.

Maybe split the group into two? Something along the lines of ".hardware"
and ".frequencies" ??

Here in Howard County, Maryland, they refer to African-Americans and other black people as "Number 1 (gender)" and to generic white people as "Number 2 (gender)." Yesterday I heard a reference to a "Number 5 female" and was wondering what that might be. Does anyone out there might have a more comprehensive list of the codes their police departments use for ethnic groups? I know that the #1/#2 designations are sometimes reversed, but what about the rest?

If you're listening to that PD exclusively, try it with NO antenna.
Wavelengths at 800 MHz are close enough to zero that no antenna is able to
pick up a local signal, while attenuating the off-freq. stuff that is
overloading the front-end. I use this method at racetracks when listening
to race teams.

No good if you're scanning a mix of VHF-UHF-800 stuff, though.

An attenuator inserted in the transmission line would accomplish the same
thing.

It has nothing to do the wavelength being so close to zero - relative to
the entire RF spectrum, 800 MHz has a wavelength nowhere near zero. It's
about a foot. Removing your antenna simply adds a lot of attenuation,
to both the desired and undesired signal. A strong signal can still
induce enough voltage at the receiver input to be usable without a whip.

> be drawn, and that is by signal strenth sample at the tower in

While I don't recall what actually happened in the O.J. case, you have overlooked one fact. Triangulation would be required if the object was stationary, but if you can see that a cell call was handed off to sequence of 7 different cells and then you map the cells, it would not be difficult to figure out which road was being traveled.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I order a The Secret Service video collection from Wireless.. this is a 4 video tape set of the series that aired on The History Channel and A&E.

I asked if they could ship via US Postal service but they insisted on UPS. After about a month.. I called to inquire on my order and they called me back (after tracing through UPS) and told me that the package had been delivered at such and such date at such and such time.

I said no..not at my house.

She said she would reorder it. I asked her why they didn't request a signatue and she didn't know.

I have had nothing but horrible experience with United Parcel Service and was told that in TEXAS it is bad all over. I work for a company that can order items for people such as stereos, tv's, vcr's etc and people will call us inquiring about their package.. I ask them if they have looked all around their house.. and I explain to them that UPS has a habit of leaving a box under a flower bed or under a bush.. about 60% of the time the people put me on hold and go outside and look and they find the package.
They just assumed that it would not be delivered w/o a signature. I don't know if UPS fakes the signatures or what..or if they guarantee delivery with the shipper..but I would not ship with them if you have the choice.

I have found the United States Postal Service to be far Superior.

this may only be happening in Texas but be aware.

A friend of mine bought a HeathKit HF amp from someone up north about four months ago. When the package arrived C.O.D. he did the normal inspection and even opened the top of the box the make sure it was not 75 pounds of bricks. He paid $600 cash and was happy. Just as the brown truck drove off, he notice a rip in the side of the box that was about one inch high and six inches long. It appeared as though someone had stuck their finger in the cut and smooothed out the side. It was not noticed by the casual inspection.
When he opened the box up and pulled the amp out, it became obvious. A tine of a forklift had been driven through the box, directly through the center of the amp. It was destroyed.
My friend contacted U.P.S. and they sent out an adjuster. To make a long story short, they gave him a run around for about a month, and THEN told him he did not have a valid claim. They said that the SHIPPER would have to file the claim. Even though my friend had already paid out $600. The shipper had already received his payment.
Luckily, the shipper turned out to be a very honest "good guy". He sent my friend his money back and then filed the claim against U.P.S. I never confirmed it, but I assumed they paid him back.

The frustrating things about the story is:
Someone in the U.P.S. organization had an accident and destroyed a package. Instead of owning the responsibility, they sent it on knowing it was ruined. U.P.S. could have saved a months worth of trouble by telling the receiver to contact the shipper for restitution.
We radio buffs are always wary of each other ripping us off. But, in this case two honest people used a dishonest middle man. It all worked out in the end. But we still talk about the time my friend got "forked" by U.P.S.

>1/4 mile

Uniden EXP9200 Spread Spectrum

I've used this phone in a variety of enviroments:

Residental, with base on first floor of home: 1/4 mile.
Commercial area shopping center etc. range reduced to
about half of above, in one direction, near full 1/4
range in the other direction, varies with amount of
obstructions.

I also took the phone to a friends home, he lives near
the top of a hill abt. 250-300 ft elevation, with a clear

view of town, from there I got coverage nearly
anywhere within line of sight. Longest range
was 9.4 miles. Calls are always either clear with
no static, or the audio disapears if you get out of range.
Propagation at 900 Mhz is very near line of sight,
it works very well if the base has some elevation above
the surroundings. The signals are easily attenuatted
by buildings foillage etc.

The range of analog models is likely to be shorter.

2972. SCA subcarrier band?

Newsgroup: rec.radio.scanner
Date: 1995-12-04 00:00:00 UTC
From: dfrankli@itctel.com
Message-ID: <49vspi$mkk@swifty.cfa.org>
Source record: 245381

Looking through a recent Tucker Electronics catalog, I noticed a kit for an SCA decoder. The unit connects to the detector output of an FM receiver and tunes the SCA subcarrier band (50-100 kHz). With it, the catalog claims, one can tune in programming ranging from "stock quotes to rock music" and the "continuous commercial-free background music" used by restaurants.

I am unfamilliar with this whole concept and would appreciate it if someone would enlighten me. Specifically:

What is the SCA subcarrier band?

Is it widely used?

Is it worth decoding?

TIA

I don't know is Scottsdale has their own bird, but Phoenix does assist
neighboring cities when asked. Also, one night while monitoring I
heard the air unit say that the observer was a Scottsdale PD officer.
"Air 2:" is a common call sign for the Phoenix air units.

I forgot to add: or best offer!

Diamond 'portables' antenna FS

model rh77ca

rubber whip for hand held scanners and ham radios with BNC connection.
Excellent antenna, better than stock antennas.

this antenna is thin and very flexible and is about 15" long

I bought for $35. will sell for $20. please e-mail if interested,
thanks.

Actually, the microphone in most baby monitors is quite sensitive...and
is coupled to an AGC. If the baby is silently snoozing, the mic will
pick up (and transmit) noises from virtually the entire house.

Could someone give me some information on ACARS -- Aircraft Communications Addressing and Reporting System? Tips on data rate, kind of encoding scheme used, and how possibly to decode the signal with homebrew hardware/software etc, would be great...

Also, is this different from the aircraft transponders? ACARS on 131.55 MHz I'm already aware, but are there other used freq's?

Thanks in advance,

Derrick Kim

The patent infringement only occurs if the code stream is decoded. There
are techniques currently in use that can following trunking without
decoding the signal! The developer is still being cautious, however.

No - I'll have to disagree.

Number 1 is African-Americans and other black
Number 2 is white

Now this is where I'm not sure

3,4,5 - Asian,Hispanic,Native American

but the order is not correct.

I think 5 is Asian.

I listen to it every night

"A number 2 male , last name ...."

That's here in Howard County MD.

No, YOU have no idea what YOU'RE saying. Alot of parents keep the
baby crib in their bedroom, to be close to it. During the day, the
transmitter portion is in the PARENTS bedroom, and the receiver is kept
with the parents. At night the receiver may be turned off, but sometimes
the transmitter is not. Now, do YOU understand what WE are saying, do you
"get the point?"

3005. San Diego Fire & MedEvac Freqs

Newsgroup: rec.radio.scanner
Date: 1995-12-05 00:00:00 UTC
From: drice@enuxsa.eas.asu.edu
Message-ID: <DJ3GE9.Jq5@ennews.eas.asu.edu>
Source record: 245235

I'm looking for the frequency of Federal Fire Department in San Diego, California. I'm not referring to "federal fire departments" in general. There is actually a fire department (run by the federal government, obviously) called Federal Fire Department in San Diego. I have a freq of 138.600 MHz, but that didn't seem to carry any FFD traffic. It was Camp Pendleton, I think.

I'm also looking for MedEvac (helicopter) frequencies that are in use in the San Diego area.

For that matter, I'm really looking for any fire and EMS frequencies that are in use in San Diego and outlying areas and NOT on 800 MHz. Yes, I should get an 800 MHz scanner, but, I don't have one now.

I have a few frequencies obtained from http://www.cs.nmsu.edu/~thharrel/ but any other will be much appreciated. I am going to have a better radio with me this time, so I will have VHF-Low and UHF at my disposal as well as VHF-Hi. Police frequencies are also welsome, but my main interest is definitely fire and EMS freqs.

Thanks in advance for any info. Please reply via e-mail, or send a CC of any followups to me in e-mail, as my news feed is extremely slow and unreliable.

re: the thread about bringing scanners into the 'mall of america' in bloomington, MN...

the original poster expressed some reservations, implying mall "security" is somewhat insecure with customers carrying scanners...

last fall the "minnesota radio hottyists' held a monthly meeting at the mall, specifically we pushed some tables together on the second floor food court, brought out our scanners and...well...scanned. we were there for several hours, and our time was without incident.

i can't speak to anyone else's experience, of course. my recommendation to others who scan in public...just be cool about it, a bit discrete, and no one will bother you. especially not the security guards, who are more worried about fights and shoplifters than radio geeks with earphones sticking out of their heads.

BYW, enjoy the mall. i recommend the 'mystery mine ride'. long line, but worth the wait.

on another subject:

i note in the latest MT the offer by a major equipment retailer to restore cellular frequencies on blocked scanners. looks like some lawyer found a loophole in the law, which enables restoration on scanners mailed in, but not on new scanners sold. which again shows the stupidity of the law.

P.S. it costs about $40, plus postage, to have a scanner made whole. thank your congressmember, next time you run into him or her at the barber shop or K-Mart...

: Anybody tried to do modifications on their cordless phone?
: Changing the antenna on the handset and base would increase the range, is this
: true? If so, what kind of antennas are you using and gave good results. What is
: the range?

Something else you may want to try. Get ahold of the service manual for
your telephone and *move* the frequencies away from where they normally
are. Now you will be transmitting/receiving on clear channels. Combine
this with improved antennas on base and handset and it's easy to see you
could double the range of the unit.

Note: This could be unlawful so check with your radio regulations.

Cheers!

Yes, I got dinged by that a few times by leaving the mode in WFM rather
than NFM.

The other suggestion I had was that the antenna that comes with the
AR8000 is nice and compact, but one can find a wet popsicle stick that
will have better reception, particularly in VHF low, and HF. NOAA
freqs should be ok generally.

Yes, but remember that 99.99% of the people who buy and use these things don't have a clue as to how they work. They are totally oblivious to the fact that they're actually operating a miniature radio station that transmits EVERYTHING that goes on in that room out to anyone in the neighborhood who may happen to be tuned in to their frequency. Given the sheer numbers of these things in operation and the fact that many are installed with the transmitter in the parents' bedroom, the chances of you hearing something...uh, "interesting" is actually pretty good.

Troy,

Durham Radio sells the Radio Shack Pro-43 with the cell mods already
done for somewhere in the neighborhood of $300 (US). They are located in
Canada so they can still get the "good" scanners. They have other cell
capable scanners as well.

Visit their Web page at: <http://durhamnet.com/durham/>. They offer
all sorts of daily specials on scanners, Ham radio gear, etc. They also
have parts and service departments.

John

I want to trade my AOR 1500 handheld with .5-1300mhz CONTINUOUS coverage. the handheld has a nicad battery pack, and is in good shape. It has 10 search banks, incl. 1 Search & store bank, 1000 memories arranged in 10 banks, it has a BFO for tuning SSB, and the tuning steps are PROGRAMMABLE, not SELECTABLE. That is, you can tune in any step from 5-995khz in 5khz multiples. This is a VERY nice small, light handheld. It was over $400 new. I would trade for a 2006, in Mint shape. I'd also consider a Bearcat BC9000xlt in mint only, or a Yupiteru MVT-8000.

The max ERP for a cellular phone is 7 watts. But a mobile sends
3 watts max to the antenna.

> > Portables (handheld, pocket)are 600 mW. Battery life would very

>
> Don't some of them allow you to go up to 3.0 watts on high power mode?

You might be thinking of handhelds that can be used with vehicle
kits. There are many vehicle installation kits with external amps
that allow 3 watt operation as a mobile. But handhelds are limited
to 600mW when used as portables.

There are a few handheld phones that, when programmed incorrectly
(wrong SCM), will try to go above 600mW. They can do it for a
while but they suck the soul out of batteries and get warm - which
will cause most phones to back the power down again.

Hello All,

I will be visiting New York City soon and am planing on taking a wide band ham handy talkie along to listen in on the public service frequencies. In preparation for this trip, I have researched, through various resources, a good number of frequencies. My problem is in determining which of the many frequencies that I have are ones that I really want to spend time listening to.

I will be staying at a hotel in midtown Manhatten, near Times Square. If you have information about police dispatch, squad to squad, fire, fire ground or just about any active, interesting frequencies within earshot of midtown, I'd appreciate your reply.

3018. Many AR8000 for Sale, Why???

Newsgroup: rec.radio.scanner
Date: 1995-12-05 00:00:00 UTC
From: ridgeway@seikotsi.com
Message-ID: <4a21i5$d56@news1.seikotsi.com>
Source record: 245289

Hello All,

I am interested in purchsing an AR8000. I have seen most of the
liturature for it and am impressed so far. I currently own an IC-R100
and am very happy with it's front-end. Great sensitivity, good
selectivity and image rejection. I plan on keeping the R100, and am
now looking for a decent handheld.

I have noticed quite a few AR8000's for sale here in rec.radio.scanner
and some in alt.radio.scanner. Usually I shy away from a radio when I
see several posts to sell it. This may be either that it is X-mas
time or the radio could not be worth the money. I have seen prices
from $500 to $800. Grove has them for $599.($40 for cell mod).
This seems like a fair price for the features. More I think about it,
the price seems a little low for the capabilities.

Hey, all you AR8000 owners, What's the scoop? Is it worth the money?
Are the front-end specs as advertised? What about selectivity and
image rejection? Ease of programming w & w/o the computer interface?
Any other comments? Qualify your answers.

Thanks in Advance!

//Richard\\

I agree with the flow of this posting. UPS is now in the wrong business. I have had them lie to me (oh yes, we can deliver your package to the controlled area you work in on a military base [not]), drop off signature required packages on the front door in an apartment complex (as well as my house now). I've even had one of their stupidvisors try to tell me that the orignial carton with the original packing material for an electronic piece of equipment (previously shipped by UPS) was insufficient protection. They then couldn't find the ruling in their operations manual.

Sorry UPS, but I go out of my way to have my packages sent USPS or Fed Ex. Too bad they don't read this mail group. :(

I've been mailing Javiation for the past few days, saying that I was interested in buying a scanner from them and could they please tell me what the standard procedure for doing so would be, and I've gotten NOTHING from them. Of course there's no way to be sure that they got it, but nothing's bounced and all my _other_ mail gets to its recipients fine.

What's up with them? Do they just check their mail infrequently?

What about a "magic" device that does not use any patented claims?

This is purely theoretical, but I am curious to find out if the very listening action itself is considered "infringing." (i.e., is ANY technique infringing or is it the very idea, the very act, of decoding considered actionable)

If you are not an attorney, I would GREATLY appreciate it that if you find out you could let me know the answer...

If you pull apart a cellphone, you will see a large can inside, with only
three commections, they are sometimes labled 'ant' 'rx' and 'tx'.
Couldn't be easier. It connects straight to the antenna, although it
couldn't be of much help, it won't amplify any signals, all it will do
is attenuate other signals, it is used to prevent the transmitter of
the phone from getting into the reciever while using the same antenna.

Not to mention that some of the transmitting units are * VERY * sensitive.
We have a Fisher Price system, with the transmitter downstairs in the
baby's room. I can snap my fingers upstairs in our bedroom where the
receiver is, and I can hear it through the monitor! Your mileage may
vary, since we used to have a Gerry unit, and you could barely hear the
child with that unit.

When we first installed the units, we thought that our child was having
breathing troubles--he sounded like Darth Vader. We just had the volume
up too high. You can hear every breath with those things.

Also consider that it's the IONIZING radiation that is the most
dangerous. Cordless phones, cell phones, HT's don't operate at a high
enough frequency to emit ionizing radiation.

Of course, touching the radiating element of a 200kW FM broadcast antenna
will give you a nice burn but most people don't do that sort of thing.:)

Here is the full text of the Florida scanner law that was sent to me a few weeks ago. Note the exemption for hams

----------begin included messge----------

TITLE XLVI CRIMES
CHAPTER 84 OBSTRUCTING JUSTICE
SECTION 843.16

{SECTION 843.16 }
Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle

as herein defined or a place established by municipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals

on frequencies assigned by the Federal Communications Commission to police

or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal Communications System or to affect any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

(2) As used in this section, the term:
(a) "Emergency vehicle" shall specifically mean:
1. Any motor vehicle used by any law enforcement officer or employee of

any city, any county, the state, the Federal Bureau of Investigation, or
the Armed Forces of the United States while on official business;
2. Any fire department vehicle of any city or county of the state or any
state fire department vehicle;
3. Any motor vehicle designated as an emergency vehicle by the Department

of Highway Safety and Motor Vehicles when said vehicle is to be assigned
the use of frequencies assigned to the state;
4. Any motor vehicle designated as an emergency vehicle by the sheriff
of

any county in the state when said vehicle is to be assigned the use of
frequencies assigned to the said county;
5. Any motor vehicle designated as an emergency vehicle by the chief of
police of any city in the state when said vehicle is to be assigned the
us
e
of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person
participating in a citizen crime watch or neighborhood watch program when
such program and use are approved in writing by the appropriate sheriff
or

chief of police where the vehicle will be used and the vehicle is assigned

the use of frequencies assigned to the county or city. Such approval shall

be renewed annually.
(3) This section shall not apply to any holder of a valid amateur radio
operator or station license issued by the Federal Communications Commissio
n
or to any recognized newspaper or news publication engaged in covering
the

news on a full-time basis or any alarm system contractor certified pursuan

t
to part II of chapter 489, operating a central monitoring system.
(4) Any person, firm, or corporation violating any of the provisions
of
this section shall be deemed guilty of a misdemeanor of the second
degree,
punishable as provided in s. 775.082 or s. 775.083.

History.--ss. 1-4, ch. 26886, 1951; ss. 24, 35, ch. 69-106; s. 1049,
ch.
71-136; s. 1, ch. 86- 55; s. 1, ch. 90-62.

There are two diodes, easily visible, behind the 3 key inside the radio after you remove the top cover.

Clip both of them. You will have a faster scan rate and cellular coverage will be restored.

Michael,

Tell Richard that he's asking way too much for his scanner. They're going for about $310, brand new, in the box with a one year warranty from Durham Radio Sales <http://durhamnet.com/durham/> and that includes the cell mod!

Looks to me like it's worth about $200 or $225. Besides, what papers are you talking about? Box and manuals, okay. But papers? We don't got no stinkin' papers!

John (Deputy, Net Price Police)

From: seven77@gate.net
Message-ID: <4a1qab$47na@news.gate.net>
Source record: 245318

Greetings!

I tried to take the path of least resistance and trade my ICOM R7100 for an HF rig. I had a couple dialogues going where the other
party decided they didn't need the best scanner ever made, so here goes:

ICOM R7100 1000 channel scanner
Optoelectronics CIV interface and cables
ScanCat software

This rig is unblocked, and only nine months old. It is in excellent condition, and includes original boxes, manual, and accessories.

$1100 and I pay shipping CONUS UPS ground. You pay difference, and I'll ship second day. I buy and sell a bunch on Internet and
CI$, so will provide references if desired.

3052. Re: UPS - Undelivered Package Service ???

Newsgroup: rec.radio.scanner
Date: 1995-12-05 00:00:00 UTC
From: NCZN58B@prodigy.com
Message-ID: <4a0ohu$21bc@usenetw1.news.prodigy.com>
Source record: 245323

A while back I had three packages that were URGENTLY needed by the recepient. On was fairly small, but the other two were close to the maximum size limit, so I measured to be sure they would fit. I took them to a local UPS shipper, and left them. Four days later, I was told by the recepient that one box had arrived, so I called UPS, and they said they only showed one shipped. A call to the local store that offers UPS "service" disclosed that the pickup driver had said that the other two were too large. I took my tape measure, and went to the store, and just happened to be there when the pickup driver came in. I asked why he hadn't picked them up, and he said that they were too big. He showed me a chain that they use to measure items. You measure around the end, and once along the length, and, at the time at least, the maximum total was 70 inches, which is the length of the chain. I measured the box in front of him, and it was 68 1/2 inches. We then measured the chain and found it to be only 67 inches. The UPS shipping service had no idea why I hadn't been called when the driver had refused the packages, and the driver still refused the packages. I took them to the Post Office which had the same restrictions, and they took them and got the packages there in three days, one faster that UPS.

> Someone told me that different police departments use different codes,
> but is this true?
JR> Yes, it's true. If you are really interested in knowing the codes buy
JR> the POLICE CALL from RS.
The codes in Radio Shack's POLICE CALL aren't always correct. Don't
bother asking whoever's working the Radio Shack store, as if what you
ask them isn't in a book in front of them, then they're lost. You'd be
far better off finding an independant retail dealer who sells &
actually knows something about scanners, and knows the area &/or
particular law enforcement agency that you're interested in.
Hope this helps.

I would like to know how you tracked the Fed-Ex package via the internet.
This seems like it would be very useful to know especially if you are
expecting the package for a dealine.

Please e-mail or post since I am sure other people would also be interested.

Frank just was confused about what you were talking about.

>Number 1 is African-Americans and other black
>Number 2 is white
>
>Now this is where I'm not sure
>
>3,4,5 - Asian,Hispanic,Native American
>
>but the order is not correct.
>
>I think 5 is Asian.

It shouldn't be too difficult for you to figure out #3/#4/#5 based on
your local crime & ethic population statistics.

>"A number 2 male , last name ...."

Well, "A number 5 male, last name Chan..." "A number 4 male, last name
Rodriguez..." "A number 3 male, last name Proudfeather..." & that type
of thing kinda sorta might provide some clues! ;)

#1. Do some intel work -- statistically, what race in the venue you're
monitoring commit most of the petty crimes that you hear them give
suspect info out on a hourly basis?
Put the races in order. For example, over here, criminal statistics &
population ethnicity would make the order Black --> White --> Oriental
--> American Indian.

#2. Do some traffic analysis -- if for petty crimes the suspects are
most frequently described as "#1s," that would (again, over a period of
time) lead me to conclude that a "#1" was a black male...

#3. Do some follow-up intel. If you hear them talking about a bank
robbery suspect who just held up the Bedrock Bank & Trust as a "#6," &
later hear about it on the 6PM News on TV & the news says that the bank
robber was a white female, then you've learned that Bedrock PD's
descriptor code "#6" equates to either a female, a white female, or a
white person, & you'll isolate exactly which over time & experience.

Other suggestions:

#4. You can always call them up and ask, or strike up a conversation with an occifer sometime & ask him or her. Usually, the codes are just for brevity, & not for security, so the po-lice shouldn't make a big deal of it if you ask for the info.

#5. Disguise yourself as a ______ (certain ethnicity), create a minor crime wave, making sure people see you, then hide out at home listening to your scanner as the po-lice are running all over town looking for a "#5 male" (or whatever), & you've just linked the code with the ethnicity! ;)

#6. Join the Baltimore Police Dept., & you'll learn all the codes the easy, boring way!

#7. Attend a National Cryptological Skuel "Introduction to Traffic Analysis" course at a location nearby!

#8. When you hear them make reference to a "#6" male in custody, hop in your car & rush down to the scene immediately, then look at the suspect & determine his ethnicity.

#9. Get rid of those $#@&*! scanners that do nothing but frustrate you (note: you can send them to the P.O. Box address below) & find a more relaxing hobby!

#10. Become one of these liberal do-gooder types that think the po-lice shouldn't be able to use ANY codes whatsoever over the airwaves, because by doing so, they are "INFRINGING" on the "PUBLIC's" "CONSTITUTIONAL RIGHT" to listen in, and perform the "WATCHDOG" function, helping "PREVENT POLICE BRUTALITY AND CORRUPTION," and that the codes are part of the impending "NEW WORLD ORDER" plot! Get local public support (no matter how stupid something sounds, there are always people with nothing better to do than support someone that seems to be a crackpot just like them, and other people who just like joining in a protest -- it is good exercise), and the pol-lice will have to abide. Otherwise, just convince that pothead mayor Schmoke, and/or just become enough of a nuisance to where the police decide to give you the damn info you want just so you'll shut up (people are probably hoping you'll get the info soon, so *I* will shut-up!)!

>That's here in Howard County MD.

Victor,

You seem to know quite a bit about the ar8k. I currently own a
IC-R100 and am very pleased with the front-end specs. Sensitivity is
excellent. Selectivity and Image rejection are real good. I have no
complaints about the r100. I would like to have the capability of
computer control and also the interface to the Scout Frequency
Recorder. Do you have any experience with the latter?

I would also like to enlist any other comment/problems/ect. about the
ar8k. Please qualified answers only. Just saying that "I have the
radio and it works great!" Doesn't tell me why??? Say why it is such
a good radio or a piece of junk.

Thanks in Advance.

Can I assume that you are serious about this?

Number 1 male, number 2 female, etc. is the terminology used when an officer is calling in for info about a group of people.

For example, an officer stops 3 people, "Number 1, male, African American, six foot, 200 pounds, etc, etc...Number 2, female, Hispanic, etc....

Get the idea? The number used and the race have no relationship at all.

At least that's how it is here in the midwest.

I guess it depends on the acustics of your house and the brand of moniter you use. The one we use is vary sensitive (and pluged into a remote controled switched outlet) Late at night when I'm out in my shop I can tune it in and hear almost every sound in the house, and our home is over 2000 square feet. If some one had one of those in a small apartment you could hear a mouse fart.

I believe in my 2006 it was a diode that needed to be cut. There was
another one there as well. Do you know what this one does? Thanks.

Gee you must have the only baby monitor in the country that only
picks up whats in the baby room.

Others will pick up a wisper at the other end of the house!!

Have a good listen.

>Stupid asshole. The transmitters or microphones aren't that great. They are

Yup I can tell you are a Ham. I just have to read the first two
words in your
reply. (must be a no coder'er, one of the new guys)

This was the first time I ever sent a message to you. It was posted
in the
newsgroup and It looked like a discussion about baby room monitors.
The purpose
of posting messages in newsgroups is to get information from others or
to share

information. This is just what I did. I tried to share something I knew with you.
But hay...Your a ham..you know everything. You also think your better then anyone
else because you have "electronics and computer training" Well guy your not the
only one who has a background in these areas.

With less then 500mw one can talk around the world...Remember QRP rigs???
Oh sorry I forgot your a Smart Ham you know better.

Cheep devices? Overloaded from being left on? Thats news to me. I guess
its like a battery it has to be replaced once in a while eh? Gee your smart.

Have you ever thought of professional help?

I'll stop here because I'll start sounding like you soon.

Andy was trying to help you and because his opinion did not agree with yours
to resorted to name calling and went as far as even calling me a Stupid Asshole for
the one simple message. (see above)

I suggest you go back to your ham radio and practice communicating with
others. Even better, why not try C.B. then come back here after and see
if you learned anything. Maybe then you will be able to add something to the
Internet becides your first two words.

3075. Need PRO-26 fixes

Newsgroup: rec.radio.scanner
Date: 1995-12-05 00:00:00 UTC
From: Mike.Coletta@commctr.com
Message-ID: <d76_9512050700@commctr.com>
Source record: 245475

I just sold my Pro-26 but when I did have it here is what I did to combat that problem. If there is a freq you want in memory that falls within that 6MHz spacing enter a search range that the scanner will accept above and below the desires frequency. Force the step size to change to 5KHz using the STEP feature. Proceed with the search using the open squelch method when the scanner gets near your desired frequency. Once there you can use the MONITOR memory function to transfer your frequency to a desired channel memory. The scanner will search at 5 KHz steps within the preset 6MHz range when the above is done.
Hope that is not too confusing. Happy Scanning !!!

3076. help with a IC-R1

Newsgroup: rec.radio.scanner
Date: 1995-12-05 00:00:00 UTC
From: Mike.Coletta@commctr.com
Message-ID: <d77_9512050700@commctr.com>
Source record: 245476

If it were me I would keep it. I payed $275 for the one I have. I don't use all the features either but at least they are there if you need them. The R-1 does have it's problems as far as intermod, etc but I have found it beats my BC200, BC2500, and BC3000 in sensativity within certain ranges. The 800 - 900 MHz range comes in great as does the 108 - 170 range. I use the Maldol Active Hunter antenna (3 in high) on mine and the scanner can receive repeaters that are 60 miles away while in my basement while the other handhelds don't pick up unless I open the squelch. I guess there is good and bad in everything depending on
who uses it and for what. I like the R-1 and would not get rid of it. It has its usefulness as do the other handhelds I have. Happy Scanning !!!

>> Portables (handheld, pocket)are 600 mW. Battery life would very
>> short if they ran at 3 W.
>
>Don't some of them allow you to go up to 3.0 watts on high power mode?
>
Cellular Mobile Phones are limited to 3.0 Watts + 2db/- 4db. This is
considered power step 0 or full power. The ERP is limited to 6 Watts
maximum. This is due to the EIA AMPS system spec that used a 3db
antenna in the design of cellular transmission.

Cellular portable phones are limited to 480 mW + 2db/- 4db. This is
power step 2 which represents a -8db change from power step 0. 600 mW
is the high end of the +2db for 480 mW. This would be the maximum
allowable transmit power for a portable Cellular phone. A power step
is 4db and there are 7 power steps. 0 = 0db change and 7 = -28 db
change from 3 Watts.

If you played with the programming or modified the PA's adjustments you
could probably exceed these power levels. This would be pointless
though because the network will power scale the telephone so that the
signal recieved at the cell site falls within its engineering
parameters. The network controls all of the aspects of a cellular
phones operation once a call is placed.

Hello,

I'm planning on having my girlfriend get me the PRO-51 for x-mas, (on sale for ~ $199 at a local Radio Shack) and would like to hear any comments, pros and/or cons, about the unit. I'm looking for a handheld, ~ $200 US, with a good scanning range of freqs, ability to be moded, AC adapter, etc... and find the PRO-51 to fit the bill. Only trouble is I know nothing about the performance (or usage for that matter) of this handheld versus others. Any comments?

Thanks a lot for any info!

- mike

For the scanneraffi cianado, I have an AOR3000A professional communications receiver for sale. This scanner which does everything, gets everything from 100kz to 2036mh -- with NO gaps!, is amazingly programmable, can be computer operated, etc etc. Too many possibilities to discuss. The unit has about six months left on warranty which can be extended. Mint, out of box only a few hours, all manuals etc. Asking $1100 including shipping.

Well, to follow up to my own post, I finally got a response. Apparently
Jonathan Clough (who answers mail for Javiation) was out of town for the
weekend plus a few days on either end for personal business. Anyway,
they're back and answering mail again.

3091. BC2500xlt cell mod help!!!

Newsgroup: rec.radio.scanner
Date: 1995-12-06 00:00:00 UTC
From: wobig@umich.edu
Message-ID: <4a318n$hj8@lastactionhero.rs.itd.umich.edu>
Source record: 245191

I have recently performed the modification for the bc2500xlt by moving a surface mount resistor but it didn't work on my unit. The microprocessor in the article was a "uc-1513a" and mine is a "uc-1513b". Does this mean my unit is unmodifiable? If not, I would appreciate any comments or suggestions.
Thank You!

I have a aor8k and I love it. It works great and it's jammed packed with nice features. problems:~42mhz is a little weak and there is a lot of space in the case (it could be smaller), the BNC mount has come loose and the numbers on the keypad rub off (that problem is fixed on the new pads).

Aside from that, it's great. I also have a RS pro2004, rs pro43 & an bearcat 760xlt (which sucks)cause of intermod. I used to have an ICOM R-1 and I hated it so much I just gave it to a friend - so much intermod it was useless in Los Angeles.

The 8000 is my favoite so far.

My Pro-51 has a 12A3 code on the back and it picks up cell
frequencies.

What would happen if I entered the modifications?

Checked with a friend who owns a R/S dealer store, and he called his rep today, and he said that R/S had them, but that the 96 police call had been held up in QC, or, in english, quality control. HMMmmm...maybe an interesting misprint or two??? They should be shipped soon. Also, this year, RS gets 12.95 but they have split Beyond Police Call in to regions and included it in the same book so it should be worth it.

Also.....to the AOL'er who had the witty reply earlier in the thread-If that's the case, how come I can buy a 96 Camaro today.....

Just an FYI...

Modification to any part 15 device (including cordless phones) that
changes it original, type accepted design is illegal. The only antennas
that can be used are those that the manufacturer provides or approves.

I've done this too, and have pretty much concluded these are all false
hits. Since there is a waveguide running through the subway tunnels,
perhaps there is intermod generated between it and the local transmitter
in the train itself.

If you try different antennas, the hits are clustered in different areas;
dependent on where the antenna is most resonant.

Andrew,

When I worked just down Route 22 from the Bridgewater Commons mall, they were using 464.425 for security operations. I could hear their repeater well even out where I lived in western Hunterdon County, too.

I believe Kupper Airport just has a unicom station, so check around 123.000 for the actual freq. In fact, it would be no big deal to just call the airport. That stuff is common knowledge. The general aviation airport that I use in Iowa now produces a brochure on the airport and includes its unicom freq right on the brochure.

>
> Erich Berman
> eberman@execpc.com

NYPD:
476.5875 (Midtown North, Midtown South, 17th pcts)
476.3375 (6/10/13 pcts) just below midtown
476.3125 (19/20/24/Central Park pcts) just above midtown
470.8375 Citywide frequency for specialty units & highway units
(The elite Emergency Services Unit is dipatched here)

FDNY:
154.250 FDNY Manhattan Dispatch (you'll need a book to understand this
since it is all numbered codes, plus they use MDTs, so good
luck!)

NYC*EMS:
Manhattan Central dispatch is on a trunked system in this range:
856-860.987, 860.7375

This is a starting point, there are books and websites out there with all
the info you could ever want. Good luck!

Howie

3104. Canadian PRO-26 seller?

Newsgroup: rec.radio.scanner
Date: 1995-12-06 00:00:00 UTC
From: soren@delerium.engr.arizona.edu
Message-ID: <soren-0612950900590001@yuma7.rescomp.arizona.edu>
Source record: 245204

I'm probably going to buy a PRO-26 some time in the near future. Full coverage is, of course, necessary as this is too much to spend and not have it, so my options are apparently the Canadian and European versions. If anyone can help me I've got two questions:

1) The difference between the two is apparently in the default steps in certain frequency ranges. Is there any advantage in the US between one and the other?

2) Is there anywhere in Canada that I could order one from? All the Canadian scanner stores I've found don't carry the 26, and apparently the Radio Shacks sell the US version although it's not illegal to sell the Canadian version. Go fig. I'd prefer a Canadian source as it's less likely that customs will have a problem with it or ask me for a tax.

Thanks all for anyone who can help!

3108. Re: Ethnic Group Codes

Newsgroup: rec.radio.scanner
Date: 1995-12-06 00:00:00 UTC
From: jimf@mbbs.com
Message-ID: <291.3405.956.0N34881A@mbbs.com>
Source record: 245208

Regarding FGALL@INTERACCESS.COM 's 12-06-95 message entitled " Re: Ethnic Group Codes: "

-> I wrote:

->>
->>Here in Howard County, Maryland, they refer to African-Americans and
->other >black people as "Number 1 (gender)" and to generic white people as
->"Number >2 (gender)." Yesterday I heard a reference to a "Number 5
->female" and was >wondering what that might be. Does anyone out there
->might have a more >comprehensive list of the codes their police
->departments use for ethnic >groups? I know that the #1/#2 designations
->are sometimes reversed, but >what about the rest?
->>

->Can I assume that you are serious about this?

Yes.

->For example, an officer stops 3 people, "Number 1, male, African
->American, six foot, 200 pounds, etc, etc...Number 2, female, Hispanic,
->etc....

That works fine..except here they refer to "two number 1 females," "one number 1 male and one number 2 male," etc. I thought this coding might be more widespread, but from your response and another one I got via e-mail from the west coast, we have at least three different ways of reporting this info <g>.

BTW, this usage appears to be common throughout Maryland. I've heard it in Howard County, Anne Arundel County, Prince Georges County, Montgomery County, and Baltimore County and City.

Jim

Use a web browser to visit http://www.fedex.com.
With your package's tracking number you can get a list
of the times and locations the package was handled.

3116. Frequencies in NYC subway

Newsgroup: rec.radio.scanner
Date: 1995-12-06 00:00:00 UTC
From: clay@panix.com
Message-ID: <4a45l0$moi@panix.com>
Source record: 245216

I took my Optoelectronics Scout with me in the NYC Subway yesterday
expecting to see the frequencies I normally pickup in the 156-160MHz
range. Yesterday, I got a flurry of activity in the 180-192MHz range:

"C" train, approx. 18:15-18:30
192.044
188.980
187.845
182.969
183.029
180.682
181.449
181.386
181.412
182.105

"R" train, approx. 8:50-9:05
188.854
188.153
187.693
189.447
189.612

These are all in the range of broadcast TV (channels 7-13), and I got them
in the morning and at night. Anyone have any idea what's bouncing around in
the subway tunnels? I've never seen this before...

ES> A question on the 2006, I know one of the two diodes behind the keypad
ES> opens up the cell freqs, but what does the other one do? Just
ES> wondering...thanks. Eric

Cutting the upper diode (D-503) increases scan speed from 26 channels per
second to 30 channels per second in high scan speed mode, and from
13 channels per second to 13 channels per second in low scan speed mode.

Cutting the lower diode (D-502) unblocks cellular frequencies.

Be sure that when you cut them, you ever so slightly separate the cut
so that the two ends do not 'lean up against eachother' and connect. :-)

Source record: 245242
Cross-posted to: rec.radio.scanner,alt.radio.scanner,misc.consumers,alt.toys.hi-tech

I have a ATT 9120 900Mhz mounted in on the kitchen wall. We get about 100 yards range in a ferro-concrete house. The sound is awesome but I was a little disappointed with the range.

Also the phone fell from me once and the key pad covering broke off. I went recently to Circuit City and noticed they are no longer selling this model. The new model the ATT 9122 is also identical except the key pad cover is now modeled to the phone to prevent this kind of damage.

Finally I remember a couple months ago someone posted a modification that could be made to the 900Mhz phone using an external Radio Shack antennae that would significantly improve the range of the phone but I don't have a copy.

If anyone know of this post sould you report please.

Fidel

pnutts@ix.netcom.com (Paul Nutterfield) wrote:
This is not the proper place to the complaining about UPS. I apoligize for my defense of the company. I would like to address a few of the problems that were mentioned in previous posts.

1. About the classified ad placed by a UPS employee: If you are suggesting that it was advertising stolen merchandise, I would have to disagree. Theft at UPS occurs very little. All UPS employees are paid well and few would want to lose their job for a quick dollar.

2. Rip in box caused by a forklift: UPS doesn't use forklifts. Rips in boxes happen by a lot of other ways, but not by forklifts. When I get a COD package, just as when I buy something in a store, I inspect the box carefully. The person that paid $600.00 should have done the same. That doesn't mean that he or she should be responsible for the damages, just means that the tear in the box could have been noticed.

3. Size limits: Either this person got seriously screwed, or his complaint is WAY out of date. Size limits are as follows: Package can be 108" in total length or 120" in length and girth combined. No package can weigh over 150 pounds.

4. Airline tickets not being insured: Will any delivery company insure them?

As you probably have guessed, I work for UPS and don't mind sticking up for my employer. Some here said that they would never use UPS again and would only use FedEx or the post office. I assure you that nobody is perfect. I have nothing personally to complain about with FedEx (I never use them obviously :>) but my mail service locally here sucks. I bet that somewhere, people never have problems with the post office. What I am getting at here is that whether you use FedEx, UPS, or the USPS, at some point, something may happen that will not be to your liking.

I do agree though with the problems with the UPS phone service. I know that some of the people that answer the phones aren't very professional, I deal with them a lot and they give me (UPS driver) the run around also.

I hope that this may change a mind or two

Probably one of two things:

An alarm from the repeater/remote base indicating a power failure or
other problem with the radio.

It could also be a "channel marker". We use such a signal to tell users
on the frequency that an emergency situation exists and the channel
is to remain clear - only essential communications are to be conducted on
the channel. Ours is short "beep" that comes up on the channel about
every 12 seconds when activated - the users can talk over it.

>

The ferries use 151.040 mhz for comms aboard the boats and for comms at
the docks. In addition they use vhf ch 14 (156.70) to talk to the USCG VTS
in Puget Sound south of Whidbey Island and vhf ch 5 (156.25) in the north
Sound and the San Juans. They may also be using vhf ch 79 (156.975 ?) for
comms between the boats and the docks.

I bought an R-100 today, and I am very pleased so far. If anyone has any info, hints, etc please let me know!

PS: I got it for approx. $260 if that helps at all....I know it's worth more than that, though.

TIA,

Nate, KB9LSX

I am sure you are correct in your defense of UPS for the most part. However, most large companies have the bad apple who don't care about anything but the fast buck. I hope that UPS finds and gets rid of theirs.

Again, with any large enterprise, the firm tends to think it is better than it is and can do pretty much as it pleases. I feel that UPS has become this way.

My overall experience with UPS has been less than favorable and I will let the laws of economics go to work. I'll take my packages elsewhere. I'll also pass along my comments to the address someone left me this morning. I'll even tell them to see if this thread is still available for them to read.

Dearborn,MI police use a similar code for surveillance.
I believe it is as follows though I'm not 100% sure.
01 - Caucasian
02 - Arabic
03 - Hispanic
04 - African-American

It only seems to be used on "undercover" details.

I know the limits you mentioned are those for US cell phones. I thought I had read an article that the European (and maybe even the Asian) portable phones were slightly more powerful (battery life not withstanding). There were some concerns from a German study that suggested "possible" health risks and the answer from the US industry was the German phones put out a higher power thant their American counterparts.

-> A company in Canada is selling the 2006 brand new with cellular
-> restored freqs for US$310. Now if you will take $250 then I will buy
-> it. Let me know either way.

I have seen this over and over from a few people and called and tried to do business with them about a scanner. If you want to Pay for something that you MIGHT get, if they can find some, then go ahead, otherwise I would stick with people that have them.

I have wrote back to people the following
Yes, but if you call that company, they DON'T have them, and want you to pay in ADVANCE, as in charge your card before you even get them, in hopes that they might get one for you. That is a hell of a way to do business. I bought one from Mike, because HE did have them in hand, not hopes he would get them. Think about it, why are they so cheap, when they are twice on other scnners what they should cost.

:them in a couple weeks.

Not in Rochester, New York. :(

The stores here don't get the 96 ones until they completely exhaust the 95 Police Call guides..... Which means most stores don't get them until Spring at the earliest.

I gave up on trying to get one in June of this year -- Why can't Radio Shack just stock the 96 Police Call guides when they come out -- don't (at least the Rochester stores) realize this stuff is updated every year?

It is not completely true that handheld cellular phones are limited to
600mW in power...
That figure is simply common in manufacturering and system class.

There is no technical restriction on handheld power (although system
class marks for a handheld do have an assumed limit at 600mW.)

Several manufacturers have made 1.5W handhelds available for years,
and the "transportable" bag phones have always been at that wattage,
some now go up to 3 Watts.

With cell sites being closer and closer nowadays, the lower wattage is
all that is needed in most cases.

I DON'T work for UPS but have dealt with them as a shipper for several years with my current and previous employers. I have had very little trouble with them. In fact of the perhaps thousands of packages I have sent since 1983, I have only had two packages disappear.

UPS has a very diligent security program. And when it comes to stealing, employess get fired (at least) - no second chances.

UPS moves more packages than the USPS or FedEx (and others) combined.

I have learned from UPS insiders how to help make sure my packages don't end up being the ones that get ripped off. And this isn't just for UPS shipments.

- Don't send your mercahdise in too small a package. I don't put anything in a box that someone on a sorting belt could stick in their pocket or down their pants. You pay by weight, not size.

- Don't ship boxes that have expensive looking logos or product names on them. UPS has caught lots of thieving employees with "decoy" packages labeled to appear that might contain expensive merchandise. The return address should not say things like "Joe's Super Expensive Radio and Stereo Mail Order Company".

For those of you that think FedEx is ultra reliable, you might want to reconsider that right now. Your packages still might be late. Like all other shippers, this is their busiest season. FedEx is having a labor problem with their pilots. Though they are still flying, FedEx pilots are not putting in more than the minimum required flying time. That means a lot of packages could be left behind when extra flights are needed for increased volume.

Another thing about mail order to protect you - request that your purchases be shipped "FOB destination". This means that the seller/shipper is responsible for the merchadise until it gets to you. If your merchandise disappears, its on them to find it or replace it.

: I forget to what extent.

You're (partially) right. It is illegal for example to publish scanner frequencies in Belgium (southern neighbor of the Netherlands). In Germany it is illegal to inform others about the conversations you heard using your scanner. But AFAIK it is *not* illegal to listen to a scanner, (as long as you keep the information to yourself).

I am not familiar with the situation in the UK...

Almost all carriers (ex USPS) have "tracking software". You call their HQ
and give them a number and it tells you everthing about whats going on
with the package, even who signed for it and at what time.

My personal preference is DHL or Airborne Express. If your shipping
overseas DHL is the only way to go. Drug dealers prefer USPS, they're the
only shippers that need a search warrant to open a package. The rest can
do it at their discretion.

From my understanding the AR model is the CX12 plus an adapter
that gives you a place to plug the miniplugs into. By itself,
the AR8000/2700 just has a flat flexible cable jack which
obviously won't work with the CX12 cables. So if you're going
to use the CX12 with an AOR radio you need the CX12AR model.

Mine is a desktop unit--are we talking about the same thing? I swear
mine is a Uniden Bearcat 210XLT. I don't see this scanner mentioned
here on the newsgroup, does this mean there aren't that many around?

Anyone know how to go about modifying this? Also, when was this
scanner made?

If Rhess is referring to true, continuous coverage, then he's out of luck.
Continuous coverage must be supported by two things: the CPU programming,
and the RF sections to receive ALL of the frequencies. The PRO2026A
has neither.

I'm planning on bringing my scanner on a trip. My question is, will the
x-ray people give me a hard time and make me open my bag if I carry it on?
I'd be interested in hearing from anyone on this matter, thanks.

I just came back from a trip where I carried my scanner in
my carry on bag. I had no problems with security, just
ran the bag through the x-ray machine. Check the local
laws at your destination, I was in Florida and they have
some strict laws about using the scanner in a car.

They will inspect it. Most likely take batteries out to check for
explosives. You can carry it on but DON'T turn it on. Scanners emit
weak RF that could interfere with the airplane electronics. Same
with FM radios, cellular phones ...

I just got back from a trip to PIT via DFW and MCO. I had my scanner, cell phone and radar detector
all in the same carry-on bag and the x-ray folks never said a word.

I've been trying to get a decent answer on this and have come up with lot's of opinions but no actual facts. One device meets FCC regs and transmits' Since Police share the band and "must accept interference" I can't see a valid claim here. Plus with budget cuts, do you think the FCC would really come after you?

3170. Re: SCA subcarrier band?

>
>What is the SCA subcarrier band?
>

SCA stands for "Secondary Channel Authorization", and is simple another
subcarrier used to modulate the carrier. As you might know, adding
stereo to an FM radio was done by putting information onto another
"carrier" (in this case one in the several-kilohertz range rather than
one in the 100 MHz range. This second carrier was then used to modulate
the 100 MHz carrier. Your receiver receives the 100 MHz carrier and
extracts all the modulation - some of it is in the audio range and you
could hear it if you had a monaural receiver. The rest was sent to
another detector that extracted the additional information from the
second carrier. In SCA, an additional subcarrier, usually in the 50-100
KHz range, is modulated with further information. The SCA detector
extracts this from the signal. Muzak was the first company I knew about
doing this. They would buy SCA rights on a local FM station, send in
their own music that the broadcaster would add to the signal, and then
Muzak would sell the service to businesses in the area. A business
buying the service would be given a receiver tuned to the radio station,
that would extract the SCA.

>
>Is it widely used?
>

Back in my broadcast days it was, although for very limited purposes. I
understand that now it is used for an unbelievable range of purposes,
including those you listed.

>
>Is it worth decoding?
>

Of course only you can answer that, but if you like scanning and similar activities, you can certainly have some fun. And you might find something you would like to return to frequently, like interesting data, music you can enjoy, et.

Soren,

I don't know if they carry the PRO-26, but I know they have the PRO-43
(with mods) as well as others at Durham Radio Sales and Service located in
the "Great White North" of Canada.

You can check out their Web Page at <http://durhamnet.com/durham/>.
They have all sorts of daily specials and they deliver what they promise.

I'm just a satisfied customer.

John

I received one last week. They filled my order and I received it in one week.I would rather take a chance with them instead of getting one "mint" from some lying goofball. I bought one MINT two weeks ago and when I got it the thing had several dents and two of the switches were screwed up. Besides, a new one waited for is better than a used one gotten the next day.

After I bought my Pro-2006 I asked the same question and got this
information from Durham Radio Sales <http://durhamnet.com/durham/>.

I opted for a discone, but don't ask me, I'm a newbie too.

Antenna selection is based on a number of factors. The two main categories
would be 1. Your location. and 2. What you prefer to listen to.

1. Location. (All of these factors contribute to reception)
a) Distance from the transmitters you want to hear -- The closer you are,
the less band specific* your antenna needs to be.

b) Height above ground. -- Height is might. The higher you position your
antenna the further you will receive. The radio waves that scanners pick up
generally travel "line of sight". If for example, you could stand in the
exact position of your antenna, you should be able to receive any
transmitter that you have an unobstructed view of.

c) Proximity to transmitters -- If your antenna is located near large towers
with multiple antennas mounted on it, live near a hospital with paging
system on the premesis etc.

2. Your Preferences
a) All band vertical -- these antennas have "traps" built in to the vertical
element. Most of them claim 25-1000 MHz or 25-1300 MHz. Although they claim
this range, trapped antennas are usually very efficient in the regular bands
of interest and OK everywhere else.

b) Discone -- another all band, full coverage antenna. These antennas
perform about the same as the vertical listed above but tend to have a more
even sensitivity across the entire range. Good for full coverage scanners
like the AOR8000 etc.

c) Log periodic Beam -- this antenna is usually mounted on a rotor so that
you can point it at the desired transmitter. They have full frequency
coverage and are used by enthusiasts wanting to receive all kinds of
stations throughout the frequency range of their scanner. It will pick up
local stations as well as stations that would normally be out of range.

d) Yagi -- normally a single band directional antenna. Can be used to zero in on a distant station or stations with in a frequency range eg. 136 - 174 MHz.

e) Vertical gound plane -- same as (a) but no traps. Made specifically for a single range of frequencies eg. 800-900 MHz. All other frequencies will be less sensitive. Ideal for situations where intermod from outside the antenna's frequency range are a problem.

They may very well ask you to open your bag if they see it on the
Xray. If they think they need to see it, you have to show it to
them. You may have turn it on for them - I am often asked to do
that with my pager and amatuer HT. In fact, when I am not
questioned about the equipment, I usually think they are not
being as diligent as they should be.

It is perfectly legal to carry a scanner onto an airplane. But
check with the flight crew before using it while on board.

I beleive that the RFR study that was done in Germany was considered incomplete. This was due to the fact that other research groups could not duplicate the results of the study. I may be wrong on this, but since I haven't seen any published articles and studies showing RFR from cell phones as being at a harmful level I wouldn't cry wolf yet. a recent Florida court case was using RFR as the reason for a womens death by stating that it caused her to get brain cancer. The RFR expert that the plaintiff was using refused to state that this was the case.

I am not sure what type of device your are talking about that "meets
FCC regs". I am not sure that they have type accepted anything for
use as a police radar jammer. When you say it meets regs - as a
part 15 device?

Type accepted or not, if you're using an RF device to cause
intentional interference (like jamming radar), it is very likely
^^^^^^^^^^ ^^^^^^^^^^^^
an illegal operation. They are not required to accept intentional
interference from other secondary users.

Hello everyone.
After doing mods for my own scanners, friends have asked me to do thiers.
I'm now offering my services to "the net" users. I am quite familiar with
Uniden and Realistic scanners, but can work on just about anything I can
find a schematic for. Most mods are only $25. E-Mail me for more details.

Thanks,

FYI--most companies ship FOB (Freight on Board)factory, which means you own the item as soon as it leaves the shipping dock. You have to file a claim for an undelivered shipment (although you do have to get the waybill number from the people who shipped the item). The delivery contract is essentially between you and the freight company, not between the shipper & the freight company. Hope this helps.

: RIGHT" to listen in, and perform the "WATCHDOG" function, helping "PREVENT
: POLICE BRUTALITY AND CORRUPTION," and that the codes are part of the
: impending "NEW WORLD ORDER" plot! Get local public support (no matter how
etc.

Hey, this sounds a little like Toronto. A couple of years ago an Asian
big-shot cop released crime statistics based on race. He was in the
process of trying to reduce crime in Chinatown and the Asian community.
A LOT of people got VERY upset that he was targeting Vietnamese
bogus-refugee and organized-crime members as the culprits in the majority of
the crimes. (extortion, narcotics, gaming, robberies etc.).

Now it is not allowed to be releasing crime stat's based on race!

I find it hard to believe that you can solve a problem if you can't
legally identify it.

However, scanner listeners are much more able to put their finger on the
"pulse" of what goes on around their city.

In my part of town the biggest problems seem to be caused by
white-males and involve alcohol and some sort of physical abuse.

I guess Mr. Rogers never owned a scanner......<G>

Cheers!

Andy

3193. Realistic Pro 2038

Newsgroup: rec.radio.scanner
Date: 1995-12-07 00:00:00 UTC
From: kl7wf@ptialaska.net
Message-ID: <kl7wf-0612951558170001@146.63.105.201>
Source record: 245116

I see Radio Shack has the Realistic Pro 2038 on sale... It is advertised as a mobile (but doesn't come with mobile power cord or mounting bracket!), but has the AC power supply and a flip out stand. You can't dial up a specific frequency directly, but can scan to a frequency using up and down buttons.

Anyway, I'm looking at on at RS, but would like additional information, such as manufacturer, mods, quality, ...etc. Does anyone have information and/or experience with this rig?

Source record: 245117

Hey people, I'm looking for frequencies in Pittsburgh PA. I have police call, and beyond police call, but I need more - I know that it's possible to do a by city query in the FCC cdrom database, if someone could hook up ipttsburgh, it would be grealt appreciated. Im looking mostly for businesses, not so much for police-type freq's.... Id like to get every freq. currently registered in pittsburgh.

Thanks!

Kevin,

Only in the USA (to my knowledge) is it illegal to listen to cellular
telephones. Granted, the majority of Usenet users are American.
However, I don't see anything wrong with forwarding the cellular-restore
information to users who are not in the USofA. Case in point, me!

Keep up the good work on the very-excellent Opto' products!

Cheers!

From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <4a62an$agd@ccnet2.ccnet.com>
Source record: 245124

I don't get into monitoring paging systems but I haven't seen anyone talk about the FLEX paging protocol that is now emerging. This is the new protocol from Motorola that increases system capacity 10 times and enhances the effectiveness of simulcasting.

Most of the major carriers will be going to this in order to stay competitive. I have been evaluating pagers for the last couple of months for my employer. PageMart is using FLEX now it seems to really help - my test pager from them works where others won't. I have also been testing Skytel Two-Way which uses RE-FLEX (same thing but handles replies and confirmations as well) with some success.

This will likely replace Golay and POCSAG on many large systems in the future.

After reading all the wonderful comments about UPS, I had to post this article from the 7 Dec 95 Washington Post:

United Parcel Service is taking on a whale of a job.

the package carrier will wing Keiko, the killer whale, from Mexico City to the Oregon Coast Aquarium. For free.

The 21 foot long, 7000-pound of the "Free Willy" movies will travel in a fiberglass, steel and plywood box shipped in a C-130 Hercules transport plane, accompanied by veterinarians and trainers on the 8.5 hour flight. He'll travel the last five miles to his hew home aboard a flatbed truck. He's due to arrive on Jan 7.

"We pride ourselves on being able to handle any delivery" district manager Mike Piedra said.

OK folks - lets here YOUR comments. This one is ripe for snide comments... I'll go first:

What happens if they show up and no one is home? Do they leave it in the bushes? The neighbors pond (Mom - there's this giant fish in the pond...)

Ditto. I had my Radio Shack PRO2026A in my dash (it stuck out--and
I had to put a trim piece around it since it's smaller than DIN). I pulled it
out and replaced it with my venerable Kenwood RZ-1, which is DIN form
factor--except for the mounting holes.

Unfortunately the RZ-1 is, I believe, discontinued. It covers 0.5-905 MHz
continuous (hence its demise to ECPA II), although its sensitivity leaves
much to be desired, it doesn't roll over and die every time I get within a
block or two of a transmitter.

Another DIN form factor scanner I had for a short while was the Shinwa SR-001.
The human interface was attrocious...

Be carefull! I bought one of these scanners where the
800MHz band was restored. When the unit searches between two
frequencies it will hang during the search. When I press the
"search" key to resume the search it starts at the begning search frequency. It will
never reach the upper limit if it hangs during the search. This only happens
in the 800MHz range. - Maybe its the mod or the technician that performed the
surgery.

Source record: 245126

Yes, curtis almost all the carriers that utilize 900 mhz paging channels
are converting to FLEX format. Whereas pocsag paging was limited to
512/1200 and
2400 baud the flex format will go as high as 6400 baud currently. I am
suprised to hear that you were able to receive the flex page over current
formats since
we are finding that it takes a tremendous amount more radio signal to provide
accurate paging on the higher baud rates and that when paging in flex it may
not be possible to have transmitters coverage overlapping even if they are
true "simulcast" stations.

Isn't is something like you have to stop interfering if they give you
written notice of the interfering?

That's what some lawyer told me a long time ago, anyway.

I dunno. The thing SOUNDS pretty illegal to me...

3222. Re: FLEX paging

Newsgroup: rec.radio.scanner
Date: 1995-12-08 00:00:00 UTC
From: jwayda@cogent.net
Message-ID: <jwayda-0812950145250001@brea-annex1-p4.dsphere.net>
Source record: 245131

The new FLEX Pagers SUCK!

I have tried several of these pagers on a system where all of the
transmitters were upgraded from POCSAG to FLEX. The Effective paging
radius dropped from about 13 miles to about 6 - 7 miles. I missed
approximately 40 percent of my pages. With the old POCSAG system ,I
received about 95 percent of my pages. I had my paging company switch me
to an older frequency that still uses POCSAG. In my opinion, FLEX is A
COMPLETE FAILURE. If I was the President of one of these paging companies,
I would by sueing Motorola for misrepresentaion!

Jim Wayda

3223. Active Mil-Air freqs. in No. NJ wanted

Newsgroup: rec.radio.scanner
Date: 1995-12-08 00:00:00 UTC
From: alanoue@shrsys.hslc.org
Message-ID: <8DEC95.17235723@shrsys.hslc.org>
Source record: 245132

Does anyone have any active frequencies in the mil-air band for the
northern NJ area? I have a few (NORAD, military transport) etc. But
was wondering what else is "up there". I'd be happy to share & compare
what I have. Please LMK.
Thanks,
Phil

->800MHz band was restored. When the unit searches between two
->frequencies it will hang during the search. When I press the
->"search" key to resume the search it starts at the begning search frequency. It will
->never reach the upper limit if it hangs during the search. This only happens
->in the 800MHz range. - Maybe its the mod or the technician that performed the
->surgery.
->
->
My 760 XLT picks up cell imaging beautifully at 21.7 above the actual
frequency. If you feel you *must* listen to cell calls (they quickly get
boring) this is afor you to go perhaps without taking your radio
apart. Also, I agree, the squelch is quite a bit mushy. There is a mod
for that , but I have not performed it. Good Luck,
Phil ->

>Montgomery Wards, Kohl's, Younkers, etc??

>Thank you in advance.

For the stores themselves, you might give the business band a try,
starting with itinerant frequencies (151.625, 464.500 & 464.550 come
to mind). Most that I've seen are on UHF, so look between 461.000 &
465.000, and between 466.000 & 470.000. There are some "gaps" in
there for GMRS, manufacturing, paging and biomed, but that is where
you'll find most of them.

I don't know if you'll find specific frequencies for what you're
looking for here, but its a great resource;
http://www.cs.nmsu.edu:80/~thharrel/scanner/scanner.html.
Its a web site aimed at ham radio and scanning, and there is a section
with frequency lists for just about every state in the U.S. Great
site.

Hope this helps.

>The new FLEX Pagers SUCK!
>
That figures. I understand that flex uses a four level signalling format
rather than the two level format used by the standard pocsag & golay.
The concept of flex is obviously intended to fit more pagers on a single
channel by upping the data rate, hence increase revenue. Common sense
would have you believe that would be at the cost of the individual
customer reliability on fringe areas. There is inherently no error
correction with a one way protocol. I've been told nothing beats the
range of golay.
This is where more power from the paging site can improve matters.
Altitude, antenna & power output are factors. We have a 350w continuous
930mhz amp ready for production and a 500w is on the way.
Also remeber the old PURC 5000 cannot do flex, so smaller providers
using those stations will continue with the current formats.

>Since my scanners cannot reaction tune with the Scout, is it worth
>buying the Scout ? I would like to hear how people use the Scout and
>if they find it useful without having a reaction tune scanner.

I have a Scout and use a Pro-62, Pro-34 and a Pro-2006. Even tho the handhelds aren't reactive tune, the Scout 40 will save the frequencies for later review. Its a good way to find those difficult-to-get frequencies even if you have to bang them in mannually. If you get one, be sure to get a good antenna. The small on is OK for higher frequencies and easy to carry un-detected but not much range. I think it a very good unit over all..

3241. Digital Trunked Systems...?

Newsgroup: rec.radio.scanner
Date: 1995-12-08 00:00:00 UTC
From: richardd@dca.net
Message-ID: <4aagl0$h23@dca.net>
Source record: 245150

The State of Delaware is on its way to switching the entire states services, from volunteer fire companies to state/local highway departments, over to a new 800MHz trunked system.

The City of Wilmington already uses an older 800MHz trunked system, but I am told that they too will be integrated into this new statewide system.

I have been told that this new system is going to be digital and that the home scanner listener
will not be able to hear any recognizable messages. Also, the repeater systems that rebroadcast
the Wilmington Fire Department (154.965) and other volunteer fire company freqs will not be switched over to operate on this system.

Is anyone familiar with this system or systems like this?

Is this at all true, and if so, are there scanners that can be used with this system?

3242. OS-456 and ScanWear

Newsgroup: rec.radio.scanner

: I'm planning on bringing my scanner on a trip. My question is, will the
: x-ray people give me a hard time and make me open my bag if I carry it on?
: I'd be interested in hearing from anyone on this matter, thanks.

We traveled by plane in April, no problem. I had a Pro 34, a 2 meter handheld,a small shortwave/FM radio and a tape recorder in my bag.

Of course, this was before the increase in security.

I didn't have to remove the batteries (as a friend said I would) and I could listen to the scanner (and FM) after we got up in the air.

BTW, I didn't hear hardly anything on the air channels. I heard our pilot once. More interesting was searching the police freqs (something like 460-470). FM was fun, too.

3251. New Reaction Tune cable for Scout and AR8000/2700

Newsgroup: rec.radio.scanner
Date: 1995-12-08 00:00:00 UTC
From: opto@igc.net
Message-ID: <4a9ms7$gnj@IRIS.igc.net>
Source record: 245160

Scout Reaction Tunign just got easier.
Announcing the new SAC 8000 cable for interfacing the Scout to the AR8000/2700 for Reaction Tune. The SAC 8000 uses an FFC (Flat Flexible Cable) for connection to the serial port connector of the AOR scanners. There is no modification required to the scanners. Catch all the excitement of Reaction Tuning, the hottest thing going in the scanner industry.
The SAC 8000 will only work with Scout 3.1 (Scout's sold after May 1, 1995). Call your local AOR dealer for details on which version of the AR2700 will accept the SAC 8000. All AR8000 should accept the SAC 8000.
The cost of the SAC 8000 is $29 and it can be ordered directly from Optoelectronics.
E-mail us at opto@igc.net or call us at 800 327-5912.
Remember, no modification required for the scanners.

Jeff : I have the OPTI456 and a PRO2006. My initial critism was
lack of Windows software. Now that it's available, it's too expensive
for me to justify buying.

The hardware is great and it does what it says. I would like the
same functionallity in a handheld (AOR8000 maybe?). I have not
done much scanning recently but I intend to do more soon.

If you get one, Enjoy.

Called the 616-629-5801 #. The person who answered said they had no
connection with the "Gesmundo" scanner control software - they had no
info on any alternative phone number.

ACE Communication, 6975 Hillsdale Court, Indianapolis, IN 46038
(1-800-445-7717) carries the TR4500 Scanner Control Software (SCS-2)
which is a DOS based system for the TR4500, AR2500 and the AR2515. We
just purchased the "kit" (including the cable and software) - I think
it was originally priced around $35 - now its closer to $80!!!.

3254. Re: Mod's for MVT 7100 AND/OR ??

>>>>>>>>>>>>>>>>>>ATTN MVT OWNERS<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<

READER:
This letter is being posted here because of the massive surge of
E-mail that came to me about a statement that I made in a previous
posting("7100 as good as the 7200").
Well the truth is this, the 7200 display's the frequency while
in HF mode better now(More Digit's) and it also has WIDE-AM with a
built in AM ANT, But the most significant new feature to ME by far was
the ability to turn the light on and leave it on.
So after I learned what the MVT7200 could do, I decided to tweak
my 7100 a little with the help of a friend. What we came up with was a
simple mod that does away with the keylock function and instead makes
the keylock switch a lamp on/off switch. And that's it two cut traces
and two jumper's and whalla!! your 7100 is just as good with the
exception of the AM-WIDE cra_ !p :-)
So please accept my appology if anyone has been deceived, You
can not magically make your 7100 into a 7200 with just a few cut's and
jumper's.If anyone is interested in doing what I did just let me know
and we'll try to figure out how to get diagrams out on the net.

Be aware that both Whidbey Term's and San Juan Term. have moved to new freq's as a part of the new statewide DOT system. I would expect that the rest of the Term's will move to the neww system - even though the people that are using them don't like them because of the very reduced range of the 800 simplex freq's over the old 151.04. I would also suspect that the 79A (156.975) freq will not be long lived.

SCM = station class mark. Sorry, I was just trying to save space. The SCM is a group of bits set to tell the network, you guessed it, what "station class" the phone is. The network needs to know if your phone is a mobile (3 watts), a transportable (some are only 1.5 watts), or a handheld (600mW) since it controls the phone's transmit power. The network also needs to know if your phone is a 666 or 832 channel phone so it won't hand you off to channel you don't have. The SCM also tells the network if you have VOX transmit.

I mentioned it because there are some "handheld" phone that try to go above 600mW if they are told by the network. This can happen when the SCM is incorrectly set and the network thinks you're a 3 watt mobile. The network says "go to this higher power level" and the dumb phone will try to do it.

And I know someone will ask... If you have one of those car kits with the amplifier that makes your handheld work as a three watt mobile, the SCM changes when you connect the phone to the kit.

I don't have the list of SCMs here. I have them at work (in decimal, not binary). I'll post them if anyone is interested. But they are not of much use to scanner users.

Here is a response from someone with a grudge.

Check with the airport and you carrier and you will get the real deal!

While they are concerened with the threat electronic devices pose, they are also sympathitac (sp) to the travalling public.

Questions are free and so are the answers. Just do as they request and you will have no problems. Minimun wage or not!

3271. Bearcat 300 Problem

Newsgroup: rec.radio.scanner
Date: 1995-12-09 00:00:00 UTC
From: bmurray@oregon.uoregon.edu
Message-ID: <4aalgf$cph@pith.uoregon.edu>
Source record: 245033

I have had a Bearcat 300 since 1980. It's been around the world with me and I'm particularily fond of it. But it's developed a strange problem over the past few months.

I can turn it on and 3/4 of the user-programed frequencies will now display as 989.200. I can reprogram the correct ones and upon re-scan (or if I turn it off) they will more like than not revert to 989.200.

Also many of those frequencies will automatically display as being Locked Out with out my doing it.

If I go away for the weekend I usually unplug it. When I return and plug it back in the flourescent display has to warm up! It begins as dimmer than dim and finally after 10 minutes becomes dim. It used to be bright enough to light up a dark room.

The clock runs fine and the audio is strong and clear.

I tried it on 12 VDC to see if the 120 VAC power supply was the culprit, but I got the same displays and indications.

About 10 years ago, I had a similar problem and sent it to some place in the Midwest (Bearcat?). I recall they replaced a diode but don't recall if it was in the power supply ro elsewhere.

Any ideas? Where can I get it fixed? Thanks in advance.

Bill

Radio Shack PRO-43 Modifications FAQ
< Last modified September 10, 1995 >

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive (original mod + solderless)
keypad beep delete
improved audio
attaching an S-meter
400 memory channels

---

1. Introduction

As long as there is a continuing demand for it, this mini-FAQ about PRO-43 modifications will be posted every month or so. In large part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter

There is also a mod for 400 memory channels, but, to quote its author, it is very complicated, should only be attempted by someone with moderate to advanced electronics experience, and is not for the faint of heart or the "weekend technician." A brief description is included at the end of this FAQ. If the mod were included in its entirety, the size of the FAQ would be increased four-fold.

---

2. Which units can be modified for extended frequency reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is

not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive? Units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number. Until there is evidence to the contrary, the following rule for determining modifiability of a PRO-43 is to be considered *definitive*.

THE SERIAL NUMBER IS THE MOST ACCURATE WAY OF DETERMINING WHETHER A PRO-43 CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION. IF THE SERIAL NUMBER CONTAINS AN A, THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by

pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified

two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will
perform the mod for $40 plus shipping. They will move (rather
than just remove) the diode in units that can benefit from it,
but state that there is no way to tell whether the diode
should be moved without looking inside. They claim that the
determination can not be made from the serial number, FCC-ID,
or date of manufacture. For further details, call Grove at
704/837-7081. In order to get a unit modified, a service
order number must be obtained from the same telephone number.
Packages without a SO# will be refused.
----
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully
unsolder the two antenna connections from the board. Bend the antenna ground
tab fully up from the board. Carefully lift the board, unplugging the black
connector at its base, and lay the board out of the way on its bundle of
colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging
the white connector at the bottom of the board. Lift it up and lay it aside on
its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are
filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I
do not know. My thanks go out to the original author of that MOD!
Hope this helps those of you who do not own a soldering iron!

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend
antenna ground lead up out of the way). Be careful of black connector at
bottom of board. Flip board over and lay aside (wire connectors need not be
disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two
multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one
end of connector has pin 10 labeled as such. Count back to pin 6 and bend
pin 6 ninety degrees towards the large RF shield. Make sure the bent pin
clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The
lack of treble makes it difficult to hear the PRO-43 in
noisy situations, especially while listening in a car
or truck. Louis Shirley sent me a schematic and sug-
gested I remove C341, a tiny 0.015 ufd surface mount
capacitor.

I'm glad to report that removing C341 made a great
improvement. The audio is now much "crisper," more
like the Uniden 200xlt, although still not quite as
loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

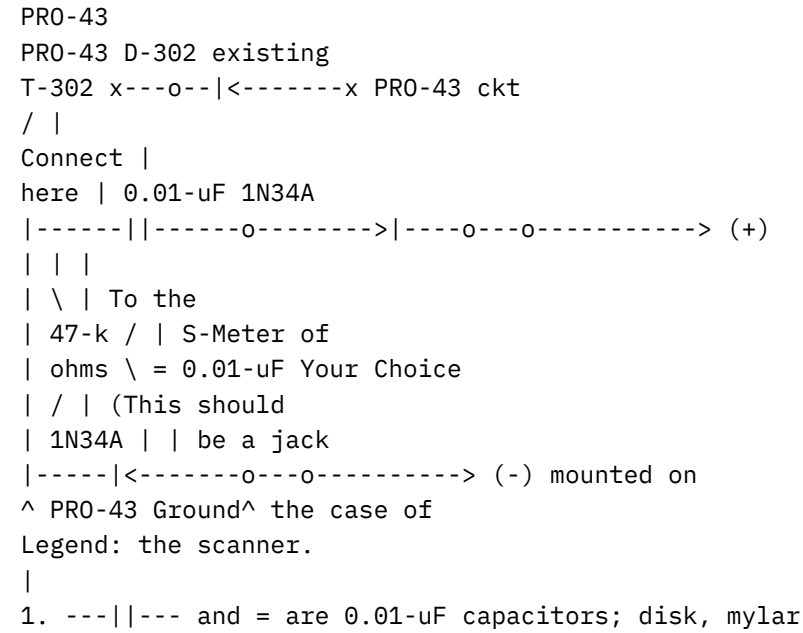
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

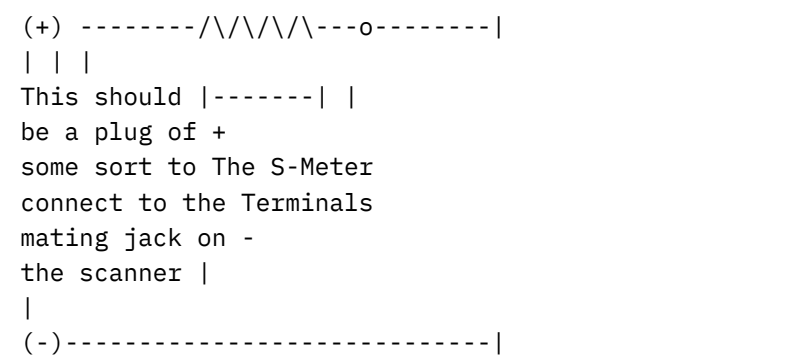
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

Reminds me of a package I never received from UPS. They claimed they
had a signature and it read something like "DRFP". I said I knew nothing
of that - they investigated, and found out it meant "Driver Release
Front Porch". The package had been left in the bushes and was there, very
weathered.

I would like to thank everyone for both the negative and positive replys. If anyone has any questions about our services please call 1-800-PICK-UPS, or leave us a message at http://www.ups.com . You may also track packages by several ways. Some shippers are provided with software to do it themselves, you may call the phone center (1-800-PICK-UPS), or through the UPS home page.

Thank you again and Happy Holidays, Oz

3284. Atlanta's Trunked Frequencies?

Newsgroup: rec.radio.scanner
Date: 1995-12-09 00:00:00 UTC
From: wpstodd@aol.com
Message-ID: <4acrq5$s4u@newsbf02.news.aol.com>
Source record: 245046

Recently, mulligan@ACM.ORG (F. Barry Mulligan), posted the new trunked frequencies that Atlanta has switched to, but I still receive public safety communications on other trunked frequencies such as

854.5625
855.5375
856.3875 .9875
857.3875 .7375
858.3875 .4125
859.3875

Are these frequencies still in use for Fulton County or are they from another county? In addition, I've noticed Atl Fire still uses 154.1900 quite heavily. Have only some of the public safety organizations switched to the trunked system? I'm new to scanning and still learning what I'm listening to. Any help would be greatly appreciated.

One device meets FCC regs? Who says? And what regs does it meet?
Which device is this?
And, while the FCC may say that Police radar must accept any interference,
the police aren't as polite. Interference with an officer while performing
his duties is frowned upon, rather officially.
Again, transmitting to jam a legal signal is illegal.

Most of the devices I've seen advertised are passive, and can't jam a
signal at all.

Bill

Hi...
What exactly do you mean by "interrupted"?
If you are getting a garbled sound,like two or more signals at once, this is intermodulation, a mixing of two signals. It usually happens because the signals bear some relationship to each other frequency-wise, and are both fairly strong. Adding an antenna that helps reception of both signals makes this worse.

If instead you mean that the signal just dies, this is called desensitising, or desense. It's cause is a very strong signal overloading the scanner's front end, causing it to go dead. Adding a better antenna will only make this worse.

Overall, since adding an antenna only makes the problem worse, my recommendation would be to use as little antenna as possible, or even none (this works here in Phoenix, too. I can hear the police repeater with no antenna on my PRO-43, downtown.).

Intermod is greatly lessened on scanners with triple conversion.

Hope this helps.

Bill

Reprint of list first given in Jan of this year.
You'll notice that the newer scanners are not on this list.
The reason is NO MORE CELL MODS !
Don't buy a newer scanner if you want actual cell frequencies, cell images can still be heard on a lot of the newer ones. A down converter is another alternative for the newer ones.
Here ya go:
Pro-34, Pro-37, Pro-39, Pro-43*Date code of 2A4 and prior, Pro-46*Date code of 2A4 and prior, Pro-2004,2005,2006, Pro-2022, Pro-2026(older ones only date code ?), Pro-2030, Pro-2032, Pro-51*Date code 7A4 and prior keyboard mod only, BC-855XLT*Date code OAID and prior, BC-200XLT, BC205XLT, BC-760XLT*Date code prior to 1994, BC-700XLT*Date code prior to 1994, BC-890XLT*Date code prior to 1994, BC25000XLT*Date code OAID and prior, Regency 4030, Regency 1600.
Any additions or corrections would be appreciated.
Happy Scanning !!!

3290. New OPTO "Cub", Any info on this?

Newsgroup: rec.radio.scanner
Date: 1995-12-09 00:00:00 UTC
From: alanoue@shrsys.hslc.org
Message-ID: <9DEC95.19341364@shrsys.hslc.org>
Source record: 245052

Does anyone know if this new lower priced and smaller size counter works
well in the "field"? Or is it primarily for bench testing and that sort
of thing? I'm interested in a counter that will accurately grab frequencies
from across the street etc. Would I need a Scout? Any info would be
appreciated.
Thanks,
Phil

3292. pro-2026 mods (for 'newer' models)??

Newsgroup: rec.radio.scanner
Date: 1995-12-09 00:00:00 UTC
From: brad@chopin.udel.edu
Message-ID: <4acttn$mrl@chopin.udel.edu>
Source record: 245054

I have seen cell mods for the pro-2026, but none of them apply
to the 'newer' model that I have... are the newer ones umodifiable

the two ways for modifying both suggest cutting a diode, either L201,
or one on the small pc board in the front of the unit... i can see the
holes in the board where they are supposed to be, but no diodes..

any info or suggestions... thanks

brad

3295. BC760XLT mod reply

Newsgroup: rec.radio.scanner
Date: 1995-12-09 00:00:00 UTC
From: Mike.Coletta@commctr.com
Message-ID: <e91_9512090826@commctr.com>
Source record: 245057

For the person requesting the cell mod for the BC760 here ya go:

For older model (No BNC connector)
Located microprocessor HD 40740085
Clip pin 20.

For newer model with BNC connector
1. Locate the Sanyo IC under bottom cover.
2. Locate the long row of solder pins above the Sanyo IC
3. Locate pin 26 of the microprocessor
4. Cut the two traces leading to pin 26
5. Solder bridge pins 19 & 20 together
6. Solder bridge pins 26 & 27 together
7. Solder bridge the two leads of the chip transistor above pin 27
8. Unsolder or cut the 47K chip resistor marked "472"

These mods were taken from the Radio/Tech modifications book printed by
Artsci inc. I have never tried this mod, maybe someone has and can
confirm before you attempt it. Here it is anyway. Good luck !!!
Happy Scanning !!!

: Just hope they don't leave it on the beach. Last time a whale was on the
: beach, Oregon DOT blew it smithereens with 1 1/2 tons of TNT.

This is wrong. The year was 1975, in late November. The DOT tried to blow up the whale with a hundred pounds or so of dynamite. The effort was a decided failure. Although it blew chunks of the whale over half a mile away, it hardly dented the whale.

I think airport security is a minimum wage job...thus the logic
factor:
If it blows up in the passanger compartment then it's the fault
of the consession company paying folks minimum wage to do
security checks. If it blows up in the baggage compartment it is
not their fault.

i had a similiar experience with UPS a few years ago. I bought a hard drive from an outfit, and couldn't get it to work. So I shipped it back UPS as per the company i bought it from's request. the drive had a 10g shock detector on it (the company put it on there), and was in it small foam padded box that was suspended in a 2'x2'x2' box with even more foam. quite well padded you will agree? needless to say the drive arrived with shock detetor tripped and a dent/puncture in the box and drive was dead. I had luckily insured it, but UPS rep said damage to box was not enough to warrant paying off insurance. I was totally livid to say the least. after fighting with them for MONTHS, finally had some time i could take them to small claims court (plus had evidence i needed as well) and out of the blue they called and said they would pay insurance on it after all. needless to say i will never ever use UPS ever again and only have when the person to whom the package was to be delivered to paid up front and understood my objection to using that sleazy outfit. i personally use US mail and have never had any problems, but i know others who have so to each their own (US mail sure charges less thats for sure).

my dad worked on aircraft (military) radar systems for about 15 years or so, and 7 of the 10 guys he worked with all got cancer of one form or another during about the last 5 years or so he worked with them. i dunno if there is a link, but 70% is a bit strange. my dad never got cancer that i know of; he passed away due to other causes a couple years after he retired. i'm sure these guys were real careful how they handled these systems, so one has to wonder about stray radiation. i dunno the freqs they worked with, but it was F-14 if anybody knows these freqs.

3313. Please help with Pro-51 cell mod!

Any idea why they would put a diode in there to slow down scan speed?
this doesn't make any sense to me. do you ahve a 2006? does it cause any
problems? just wondering. i've got one plus schematic. schematic didn't
make any reference to the speed one, and just said for the other that US
required it, so figured that was the cell one. thanks.

JT>Thank you,

JT>John
JT>jthompso@santarosa.edu

I have an old Grove database which has the freqs, but all you really
have to do is scan 450.0125 to 451. The only new media I ever bother
scanning is the KGO helicopter (450.2125). The chit-chat between
broadcasts can occasionally be interesting. Once I heard Katy Liber(sp)
talking to Stan the trafic man about meeting the sportscaster from
another station laying nude on the rocks at Muir Beach. I believe she
ended the conversation with something like "Now you know about it, and
so does everbody else with a scanner." Once in a blue moon some jammers
will get on an say hello. BTW, that 450 to 451 band will be used
extensively during news broadcasts by the remote crews. KTVU is
especially busy.

I bought a used one (the very first model). It works if you are next to
the transmitter or HT (5 ft max for HT, 100FT using a ham ant and a
powerful transmitter). It is a neat toy and if you have to have a freq
sometimes its the only way to get it. I don't use it very often. There
is a rumor that OPTO will make a combo Interceptor/Scout. You may have
noticed the prices of both items dropping lately. You may want to wait
and get the combo or buy a used scout when someone else upgrades.

You can listen to 476.5875 which covers mid-town south 29th street north
to 46 street ninth ave east to lexiington ave, mid-town north 46 st north
to 59 street lexington west to the river also on this freq is the 17
lexington east to the river 59st down to 29 street, 470.8375 citywide
"sod" is where all the big stuff comes through. 470 8625 citywide 3, try
4707875, manhattan tactical and also 476.7375 a manhattan car to car and
plain clothes freq. 470.6625 is a street crimes freq. and thes last 2 are
listed as tac freqs 4726875 and 470.7125. and I think that there is a
special private security force in the times sq. area on 4717375 or 4787625
citywide fire, all working fires reported through this freq 154.430 and
manhattan is 154.370
ems is up on a trunked 800 system that I'm not too familiar with. last
but not least these are the old transit pd [now intergrated into nypd]
160.905 manhattan and 160.695 citywide. good luck and be aware of the
super inetermode you WILL have to deal with.

>not be possible to have transmitters coverage overlapping even if they are
>true "simulcast" stations.

So here I am thinking that it's the protocol that is making this demo pager I have work so well. Perhaps the carrier just has real good coverage at our bay area facilities. All of the other carriers have a lot of trouble reaching us in certain places - like data centers and basements - And yes, we NEED the coverage in these areas. This is one of the reasons we have been running our own 900 system in the bay area for several years - as well as local mountain tops, we have PURCs at our major facilities so we get paged no matter what kind of "bunker" we may be in.

But times are changing and we can't justify the cost of building out the system to satisfy employees that want there pagers to work at Lake Tahoe and the rest of the country. So now we are looking outside.

Thanks for the info.

Correct, with a couple of qualifications.

: > If they do actually transmit, they are illegal as hell. (Please,
: > transmitting to jam a legal signal *is* illegal, so all the legal beagles
: > out there can cool it.)

: I've been trying to get a decent answer on this and have come up with
: lot's of opinions but no actual facts. One device meets FCC regs and
: transmits' Since Police share the band and "must accept interference" I
: can't see a valid claim here. Plus with budget cuts, do you think the FCC
: would really come after you?

First, there is at least one device that transmits in the Ham band, for which you need a Ham license. It does NOT transmit in any of the radar bands.

It is illegal to intentionally interfere with an officer performing his duty. Intentional jamming would certainly come under this designation. It is not the FCC you have to worry about - the "boys in blue" have their own set of laws, and they can make your life miserable. They could even confiscate your vehicle, if they wanted to be really mean - as well as lock you up for a while to think about the folly of your actions.

Now, can they determine that you are jamming them? No idea, but I would not want to take the risk.

Athena (athena@ucla.edu) wrote:
: Do these jammers work?

To answer your question.....I dunno!

I understand that they are RF amplifiers that are "excited" by radar signals that are received and redirected back at the radar gun - but amplified. It's not immediately clear to me how this would cause the radar gun to either 1) read a lower speed 2)false.

I guess if the signal coming in to the jammer was amplified a LOT the resultant noise being sent back to the gun might make it false. Consequently I can see how the jammer would make the police radar gun work even better by amplifying the signal coming back - much like radar markers in shipping lanes.

In any event, I can't see such a device being "technically" illegal. It isn't a transmitter. Mind you, baseball bats aren't illegal but if you conk someone over the head with one they become "deadly weapons".

From what I understand, each radar guns sends out a "signature" of pulses so that it can differentiate it's own signal coming back from all the ambient noise. If you can skew this "signature" in any way the gun will false. The obvious thing to do would be to make a resonant cavity on the radar frequency and physically move it back and forth very quickly.

Cheers!

Andy

>Rochester stores) realize this stuff is updated every year?

If you've already let the manager of the closest store know how you feel, you might want to drop RS an email to see if they will fix it. Radio Shack co. owned stores use a computer system that won't reorder an item unless the stock is low, and it isn't smart enough to know the difference between 95 and 96 books. Independently owned dealer/franchise stores use a different method though, and usually have the new books right after they come out. If you have a dealer store in your area, try them, since the 96 books are available through RS warehouses now. If you do have to deal with a RS owned store, the manager CAN special order this book for you. He may not want to since it takes some extra work, but if you are persistent he should do it. If he refuses, call that RS 800 THE SHACK phone number and tell them.

I'm not sure what RS customer service email is, but the keyword to search for the web page is TANDY, not Radio Shack.

The passive crap would just make the signal stronger - if it did anything
at all, which is unlikely.

If it interferes with radar, and you obviously thought that it would, then
it is illegal. The federal statute is under intentional jamming of a legal
signal. State and local statutes (and generally felonies) are "interfering
with an officer in the lawful performance of his duties", or "obstructing
justice".

: From what I understand, each radar guns sends out a "signature" of pulses
: so that it can differentiate it's own signal coming back from all the
: ambient noise. If you can skew this "signature" in any way the gun will

: radar frequency and physically move it back and forth very quickly.

You understand wrong. All the radar looks for is a doppler shifted signal.
The radar signal is completely different from the background noise, so there
is no difficulty telling the two apart.

You would not be able to move a resonant cavity back and forth fast enough,
or far enough, to effect the doppler shift. Also, unless it was very large,
any signal it reflected would be minute compared to that reflected by your
automobile.

The Yupitera can function as both, but is not very sensitive as SW radio.

>Yes, I am a neophyte. :)

How much money do you have?
These are best in their price range.

$$$$$ - JRC535 ($1600) Yupitera 7100 ($600)
$$$$ - Drake R8 ($1000) PRO-2006 ($350)
$$$ - Sony 2010 ($350) PRO-43 ($300)
$$ - Sony 7600G ($200) PRO-39 ($200)
$ - DX-375 ($70) PRO-34 ($80 used in pawn store)

I have a Sony 2010 bought used for $220.
I have a PRO-2006 bought at pawn store for $250.
I have a PRO-43 bought at pawn store for $175.

Pawn stores are good place, but takes a long time to spot radios there.

3347. Mailing list for Middlesex, Essex & Plymouth Counties (Mass).

Newsgroup: rec.radio.scanner
Date: 1995-12-10 00:00:00 UTC
From: mtiernan@world.std.com
Message-ID: <DJDrqB.Mzo@world.std.com>
Source record: 245004
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Third posting...

Well folks, I've decided to take a whack at regionalizing the
coverage of some of the scannerings that go on around me. I've
created mailing lists for the scanner listeners from the counties
of Middlesex, Essex, and Plymouth here in Massachusetts.

To subscribe, send a message like this:
Middlesex:
To: scan-msex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Essex:
To: scan-esex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Plymouth:
To: scan-plym-request@nomad.n-reading.ma.us
[Message body]
subscribe

If you have an interest in another area of coverage,
I can create a mailing list to cover that area.

I've had requests now for:
Worcester County (Mass)
San Diego (Cal)

If I get any more interest in these areas, I'll create the lists.

Let me know.

>
>

It wasn't an emergency marker, (I know what they sound like).
This signal started out as a constant carrier modulated with a beep about
once a second. This past week it sounded like digital telemetry for a few
days. Now the signal is totally gone!

The signal was fairly weak and did not seem to affect the simplex comms
between the county's search and rescue helo Guardian Two (N71KP) and other
units during the floods we had.

A search with a 2meter rig and beam indicated it was north of Seattle.

A signal of half scale was observed while mobile in Lake Stevens,WA.

Still puzzled

Kerwin

There are dozens of variations of that story running around, but the earliest documented is to a Dave Barry article - a rather funny one, at that.

3352. Please help with Pro-51 cell mod!

Newsgroup: rec.radio.scanner
Date: 1995-12-10 00:00:00 UTC
From: Mike.Coletta@commctr.com
Message-ID: <ec8_9512100742@commctr.com>
Source record: 245009

Pro-51's with date codes of 7A4 and prior still can be keyboard modded
to receive the cell site frequencies. Date codes of 8A4 and higher are
what they say "fixed". Sorry 11A4 has been violated.

Source record: 245010

1). Use a good quality alkaline (NOT ni-cad) battery. Ni-cads actually have at least 1/4 volt less than an alkaline in most cases. Using anything but a QUALITY alkaline isn't worth it - don't use "heavy duty" batteries, use an alkaline.
2). Check the battery with a battery tester - NOT a volt meter. Batteries need to have a certain level of milliamperes in addition to the proper voltage to be in good shape, and a volt meter doesn't really tell you the health of the battery that way.
3). Clean the battery contacts with a pencil eraser. Oxidation will prevent a good contact - and this fix is free! This also works on most any other battery operated device (but be carefull if the contacts are gold plated - those are soft and easily scratched).

If these suggestions do not work, you probably need to have it checked out.

: --
: **
: "Huukd on foniks wourked fer me!!"
: -R. Edmunds (az342@Freenet.Carleton.Ca)
: **

I got to get in on this one. Hogan, you are just like everyone else
that has some idea that all you are going to hear is a baby crying.
Have you ever scanned the channels? I have heard phone calls, a baby
cry, arguments, sex, business deals, and a host of other things. My
favorite is the tv in the other room.

The baby monitors receiver is built so badly that if you where just
using that, you would not hear the things that the mic picks up. The

mic picks things up like an echo chamber. Granted if the baby rooms door was closed it is harder to hear what is happening in the rest of the house. I love it when new parents set the transmitter in the window. I can hear them for blocks. :-)

Is this legal? Well, if everyone that buys one of these things read the fine print in the instruction manual the company's that make these would go out of business. In black and white it states clearly that you have no privacy when using one of these devices. It is usally under the FCC type acceptance part of the manual. Who reads these anyway? Well, no one. Case in point, we all have something to listen to.

I feel sorry for the kids that have to grow up hooked on baby monitors. My mom would sit with me. She would nurse me. Always keeping a watchfull eye on me. I am the most important thing in her life. These poor kids that have to grow up knowing that their folks are yuppies too busy to sit with them. The people that use these baby monitors think the kids are objects and not humans. Kids are objects of strees these days. When I was growing up, I was an object of love. My point is that good loving parents don't need baby monitors.

>advice?? Thanks, Roland

Your coax cable can be any length you desire *if* your antenna
provides a reasonable match at the frequency of interest. If you plan
to monitor outside of the designed frequency range of the antenna,
then coax length (as far as number of wavelengths) can make a
difference. However, general rule of thumb, if your outside of the
designed frequency range of the antenna, then expect poorer quality
signal reception. In most cases, it won't be too bad unless the
signal is marginal.

No, Roland the length is not critical. You did not say what freqs you intended
to use. But dont make the length excessively longer than needed, and use low-loss
coax if possible.

good listening

From: Keith@unix.asb.com
Message-ID: <Keith.609.009ED15F@unix.asb.com>
Source record: 245020

Here is a revised list of ACTIVE Freqs for the Suffolk Cty Sheriff
and Buses.
These 8 channels are in a rotation, meaning if the sheriff is talking on
866.0625, and the bus dispacher shouts a bus, the dispacher will
be transmitting on 866.1625,and if the one of these repeater unkeys
the next transmission (base or mobile) would be on 867.4250. As for
the 867.2875 it has had the Digital Trunking Data on it 24hrs aday
for a while now..and sometimes on 866.6875

If you have any question Email me (Keith@unix.asb.com), I keep my
Scanner tuned to these 800 Mhz freq all the time...

Keith - N2NJS

Your should leave AC applied to the PRO-2006 at all times, even
when its turned off.

I looked thru the schematics and learned that the internal 13.8vdc
power supply remains on even when the unit is turned off. This 13.8vdc
keeps the backup circuitry running and so battery is not drained at
all.

Battery drain occurs when the PRO-2006 is turned off AND unplugged.

I imagine if you are unplugging the PRO-2006 or, more likely, using
a power strip to turn on/off your bench ... this is your problem.

I don't know how long the battery should last with no external power.

Source record: 245024

Please help me! I bought a pro-43 the day before yesterday and it worked terrifically. So, yesterday, I figured I'd try the mod on it. I disassembled the unit just as the faq describes. I unsoldered the metal plate covering the CPU and then I removed the D$ and moved it to D3.

When I put it all back together, I found out that I couldn't use the following keys (2,5,8,.) directly down the center of the keypad. Every other key works but those. So, I took it all apart again and moved the diode back, thinking that maybe that would undo my problem, but it didn't.

So, now I'm stuck with a scanner that I can't program new #'s into or use the direct button to find new frequencies... Please, someone help me and tell me where I went wrong? I paid too much to have it taken to the shop so soon!

Some of the theories I've gotten so far are: 1) solder splatter got on something. 2) Putting the metal plate back in place caused something to contact.

: I'd be interested in hearing from anyone on this matter, thanks.

Just remember DO NOT TURN IT ON DURING FLIGHT! Sorry for shouting, but
I have read of people sneeking a listen etc...

You may think that it is harmless to sneek a listen, but it is not.
There are other people, the rest of the plane, that could care less
about your scanning habbits. What they do care about is maximum air
safty. Granted the plane more than likly you will not crash if you sneek
one, but the folks at the flight control station will not be happy when
radar, and other aircraft electronics start to freak out.

It is just not a single device that can cause problems. It is the combo
of several devices on board. 5 laptops here, a couple of phones there,
a radio over there. All combined can cause problems. This is a tested
fact. I am shure you know what happens when you turn on your shortwave
radio near a computer.

What I think is funny is this whole thing of computers, radios, and
electronics in general being turned off when in flight came about the
same time the air telephones where installed.

: out there can cool it.)

: Bill

I would agree Bill.

Radar loves the so called aero-dynamic cars. We where out playing with
radar one day. We used two test cars one saturn and a 58 chevy. It
took .015 seconds to get a radar lock on the saturn at 85 mph. The
chevy took 1.3 seconds at 85 mph. Why you may ask? That is simple.
The saturn did not bounce signals in every direction. The 58 chevy with
all of the high tails and sharp lines bounced the signal everywhere.
Only a small sample got back to the reciver. Either way both cars would
be busted. Just thought you would like to know.

>

If you think that is big-bro' syndrome, spare a thought for all the poor countries switching to GSM. Each tower can of course use any channel set, and while the system is low-volume they use something called 'receiver diversity' which is when two or more towers monitor the same call, and the best signal is fed though, thus eliminating the quick drop-outs, and giving you a 'soft', unheard handoff,(Which is done anyway.) but here is the interesting thing:
By getting three towers to listen to a call,(or even a registration which can be done on request of the carrier, without the user knowing) the system can place a handpiece to better than 100 meters, not using signal strenght, but delay of signal to each tower, which is of course much more accurate.
There are handsets now that can be put into test mode and can give the user details of distance to the three strongest sites, but to a user that is usless as only the carrier will know which tower-id is located where.
So as long as you carry a GSM handset with you, big-bro can punch you details into the computer, and find where you are, wherever you are. It's all a bit scarry isnt it? What I can't understand is that more people dont know about this, and kick up a fuss. But I guess if you have nothing to hide..... :-(

They can, if it's a poorly made jammer. They will give anamolous readings on the police radar, sometimes even damage it. This gives the officer probable cause to search your vehicle. Jammers are also illegal in all 50 states in America, even in states where detectors are illegal.

I wonder how they make charges under this section stick. They
can't keep people from monitoring private land mobile
communications. That would be contrary to the communications
act.

However it is illegal to use a scanner or police radio to aid in
the commiting of a crime - ie: monitoring the whereabouts of the
police to avoid detection.

With me (in Portland, OR) they just saw it sitting there on top with all of my clothes and such, and then told me I could go. They never asked me to take it our, turn it on, or anything like that.

In SFO, they didn't even ask me to open my bag.

3379. "7-7-7" code, San Rafael, CA

Newsgroup: rec.radio.scanner
Date: 1995-12-11 00:00:00 UTC
From: pcone@crl.com
Message-ID: <4ahv12$fhc@crl.crl.com>
Source record: 244836

Here is an interesting police radio code used by San Rafael, CA, PD. If, in Marin County, you ever hear the code, 7-7-7, listen up! It means that the county is being closed off because a serious motor-vehicle pursuit is in progress. Units are stationed at
Freeway 101/Lucas Valley/Smith Ranch Exit,
Hwy 580/San Quentin Exit,
Wolf Grade/Sir Francis Drake, and
101/Sausalito/Golden Gate Bridge Access.

Since Marin County is a pennisula, no motor vehicle can get past these points without being spotted. The 7-7-7 code is announced by dispatch and coordinated, primarily, on the following freqs:
San Rafael PD, 859.9625
SRPD Command, 815.0375/864.0375
Marin County Sherriff, 39.24
Marin Co. County Mutual Aid, 39.52

I recently monitored a motor vehicle chase (the subjects had fled a residence, jumped in their pickup, and were trying to outrun an officer). The San Rafael PD requested a 7-7-7. Each "road block" unit checked in at station. Dispatch kept all units informed, right down to the last seconds of the chase when the dispatcher told the commanding officer, "Unit xx is lighting them up now." The subjects were stopped at the Hwy 580 exit for San Quentin. (Is that poetic justice?)

Despite my luck with this 7-7-7 code, I'm pretty new to public safety scanning and can't get all the 10-codes right for San Rafael, CA.

I have Police Call, but the codes used in San Rafael do not conform to those listed in Police Call for San Francisco. I know that different cities use their own "version" of the 10-codes. If anyone has a list of codes used by San Rafael, CA, would you please post or email it? I would appreciate it. Thank you in advance, and happy scanning.

It would cause the radar gun to get confused enough that it would display
NO READING.

Again, read the current Car & Driver (or was it Road and Track, I'll have
to check at home). They explain how Passive AND Active Jammers work.

I never experienced problems in security. Although the airlines won't accept
the scanner turned on during flight. It "may interfere with sensible
navigation equippemnt". So, you d better have it turned off. You want to
arrive at your destination, won't you.

You might want to use the scanner at the airport. That's more than fun.

Have fun,

It's +>only illegal to SELL them.
+>
This last line is the key here, but some information is missing. It should
state that it's only illegal to sell them *in the United States*. This
ought to get you thinking. Hmmm... Canada?

That's right, Canada. You can get the OS535 from the Great White North and
no unlock codes will be required. I asked a Canadian distributor (Durham
Radio Sales and Service <http://durhamnet.com/durham/> and this is what
they replied:

"The boards I sell will do cellular. However, if the radio is not already
cellular capable and the board is installed the radio will receive cellular
only when hooked up to the computer or to do Reaction Tuning. If the radio
is cellular capable to begin with, then there are no problems. You probably
already knew this but I thought I'd mention it anyway."

In other words, buy my board, install it and you can pick up cellular
without codes or any further modifications!

This is from the Opto Page.

The OptoScan 456 (OS535) is an add-on computer interface board designed to fit into the Radio Shack Model Pro-2035 or Pro-2042 receivers. The OS535 allows for complete computer control of the receiver. It will not only tune the radio, but increases scanning speed up to 80 channels per second (depending upon the
software used). It also provides decoding of CTCSS, DCS, and DTMF (Touch Tone) and much more.

At 80 channels per second, the OS535 can scan faster than an unmodified Pro-2035/42, ICOM R7100, AOR 8000, or any other scanner using computer control. The faster your receiver can scan, the less chance you have of missing any conversations. In short, a Radio Shack Pro-2035/42 receiver equipped with an OS535, along with a personal computer and the appropriate application software, forms a complete computer-aided scanning system capable of receiving VHF/UHF signals in the range 25-823.9875 MHz, 849-868.9875 MHz, and 894-1300 MHz. AM, FM-narrowband and FM wideband modes are all supported.

The OS535 also includes a built in CI-V to RS-232C serial interface convertor for application in which a receiver is connected to a computer. Its purpose is to convert the CI-V interface voltage levels to RS-232C levels compatible with most personal computers. This feature eliminates the need for an external interface convertor box. In addition, the RS-232C interface provides pipeline tuning, resulting in the ability to increase the scanning speed of the OS535 by up to 80 channels per second.

When combined with a computer, the OS535 makes using the Pro-2035/42 easier and much less confusing. Even when away from the scanner, the computer can continue to search out those frequencies you want to monitor, and record them into virtually unlimited numbers of memory channels. All front panel controls are more easily accessible through software menus. The OS535 is supported by software programs such as PROBE, SCANSTAR, SCANCAT, SCANNERWARE for WINDOWS, and RADIO MANAGER for WINDOWS. Furthermore, a file can be imported from the PerCon FCC database into either PROBE, SCANCAT or RCSI and all the FCC database information you need to know about your monitored frequencies will be displayed. Check your frequencies by location: zip code, city, county, state, region, and much more. Even find out the distance in miles from the transmitter!

One of the most exciting features of the OS535 is that it can now be used with the Scouttm; for the Optoelectronics exclusive, Reaction Tuning (pat pend). The Scouttm will automatically tune the Pro-2035/42 (equipped with OS535), CI-V receivers (ICOM's R7000, R7100, and R9000), or AOR models (AR8000 and AR2700) to the frequency it records. The frequencies may also be recalled from the memory of the Scouttm to tune the receiver.

Features

Interfaces with the Pro-2035 or 2042 VHF/UHF scanner
Decodes CTCSS, DCS, and DTMF (Touch Tone)
Scans up to 80 channels per second
Two built-in CI-V, to RS-232C serial interface convertor jacks
Receives VHF/UHF signals in the following ranges:

25-823.9875 MHz, 849-868.9875 MHz, and 894-1300 MHz.
Supports AM, FM-narrowband and FM wideband modes
Supported by the following software programs:
PROBE, SCANSTAR, SCANCAT, SCANNERWARE for WINDOWS,
and RADIO MANAGER for WINDOWS
The Scouttm; automatically tunes the Pro-2035/42 when equipped with the
OS535 Import files from the PerCon FCC database into either PROBE, SCANCAT,
or RCSI

Specifications

Signal Decoding 52 CTCSS tones, 106 DCS codes, DTMF digits CTCSS
Acquisition Time 600 milliseconds
DCS
Acquisition Time 350 milliseconds
DTMF Digit Rate 10 Characters per second
CI-V Interface Miniature 3.5 mm phone jack, standard CI-V interface
RS-232C Interface DB-9 connector, CI-V protocol with hardware
enhancements
Tape Pause Interface Sub miniature 2.5 mm phone jack
Relay, normally open contacts

You know what I have to say about this. If the plane is so delicate that a transistor radio can take it out, what does a terrorist need with bombs and guns....sheeez. I have two Uncles that both pilots (one is both a comercial AND an F-15 pilot). Both say that RF interference is highly overrated. In fact the Airline that I flew on ALLOWS the use of scanners and other electronic divices during flight, just not during take offs and landings.

> It is just not a single device that can cause problems. It is the combo

No TRANSMITTERS at all are allowed, so that means no cell phones.

> What I think is funny is this whole thing of computers, radios, and
> electronics in general being turned off when in flight came about the
> same time the air telephones where installed.

This is not true. Electronic devices were band due to the air crash caused several years ago that was linked to an FM transistor radio being used by a child on board (this was over 10 years ago). Since then the FCC has tightened restrictions on interference an electronic device can exmit, and the FAA has left it pretty much to individual airlines to make the judgment call.

Most airline now currently allow the use of a great many electronic devices during flight (although most still restrict their use during TAKE-OFF's and LANDINGS).

The funny thing is, transistor radios are STILL prohibited :-) Probably a holdback from that airline crash oh those many years ago.

I just recently did this (trip to SF to see a 49er's game). In Portland, OR on the way down there, they asked to look in my bag, they saw the scanner, and then just let me go (probably looked like a bomb to them on their screen with all of its electronics).

In SFO (on the way home), I went through the X-Ray, and they just let me pass without looking in the bag. Personally I would think that the larger airport in San Francisco would have been more strict then the one in Portland, but maybe in SFO they are used to seeing all kinds of things on their X-Ray machine.

It really wasn't very worth while, since the metal skin on the airplane blocked all but the strongest of signals when scanning during flight (in fact I got zilch until we were on final approach). I got better reception in the terminal.

HAMFEST/COMPUTERFEST CALENDAR 1995/1996 - NORTHERN ILLINOIS
last updated December 11, 1995 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic mail:
parnass@att.com. Thanks to Dennis Dale and ARRL for
providing information.

DECEMBER 1995 *

Dec 16 (Sat) - Wheaton, IL, Computer show. DuPage County |
Fairgrounds, County Farm Rd. & Manchester Rd. $6 adult |
admission. 9:30 AM - 3 PM. Info, call (708)974-2123.

Dec 17 (Sun) - Orland Park, IL, Computer show. Orland Park
Civic Center, 147th St. & LaGrange Rd. $5 adult admission.
9:30 AM - 3 PM. Info, call (708)974-2123. |

JANUARY 1996

Jan 21 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

Jan 28 (Sun) - Wheaton Community Radio Amateurs hamfest.
The Odeum exposition center, Villa Park, IL 8am-2pm, admis-
sion $8. For info call (708)545-9950. Adv tickets are $6.
For adv. tickets write WCRA, P.O. Box QSL, Wheaton, IL
60189 Very crowded, somewhat overpriced indoor hamfest.

FEBRUARY

Feb 18, Sunday: Rock Island, IL - Davenport Hamfest, Info,
SASE to Kent Williams, 4245 10th St., East Moline, IL 64244.
tel (309)796-0718.

Feb 25 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

MARCH

Mar 24 (Sun) - Computer Central, Harper College (see notes
at the end of this article).

March 24, Sunday: Sterling, IL - Sterling-Rock Falls Amateur
Radio Society hamfest 96. Info, call Lloyd Sherman,
(815)336-2434.

March 31, Sunday: Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Info: Francis Avellone, W9GLO 650 Green Bay Rd., Lake Bluff, IL 60044, tel (708)234-4124.

APRIL

April 21 (Sun) - Moultrie ARK, Arthur, IL. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MAY

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 2 (Sun) - Starved Rock RC, Princeton, IL. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers | from Illinois, Iowa, and Wisconsin.

June 9 (Sun) - Six Meter Club of Chicago, Willow Springs, IL. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Jeff Stillinger (js@ibbs.av.org) wrote:
: Just remember DO NOT TURN IT ON DURING FLIGHT! Sorry for shouting, but
: I have read of people sneeking a listen etc...

: You may think that it is harmless to sneek a listen, but it is not.
: There are other people, the rest of the plane, that could care less
: about your scanning habbits. What they do care about is maximum air
: safty. Granted the plane more than likly you will not crash if you sneek
: one, but the folks at the flight control station will not be happy when
: radar, and other aircraft electronics start to freak out.

This is outright unwarranted hysteria. Keep in mind that a number of
airlines allow scanner usage in flight - although they prohibit it during
takeoffs and landings. I suspect even this prohibition will go away in a
few years.

: It is just not a single device that can cause problems. It is the combo
: of several devices on board. 5 laptops here, a couple of phones there,
: a radio over there. All combined can cause problems. This is a tested
: fact. I am shure you know what happens when you turn on your shortwave
: radio near a computer.

Please provide some documentation for this claim. I cannot find anything
showing that such usage creates problems.

Now, there is a reason why cellular phones are not allowed to be used,
but it has nothing to do with aircraft safety.

When I turn on my scanner near the computer - nothing happens. Neither are
there any birdies on my general coverage receiver that are due to the
computer.

: What I think is funny is this whole thing of computers, radios, and
: electronics in general being turned off when in flight came about the
: same time the air telephones where installed.

Actually, the prohibition was there before the "air phones".

I am licensed as a private pilot, and have flow aircraft while using
CB, Ham radios, Cellular phones and scanners. None of them have ever
interfered with the aircraft's navigational or communications gear.

First, a correction to my post. It actually was in 1970.

: >Bill

: There are dozens of variations of that story running around, but the earliest
: documented is to a Dave Barry article - a rather funny one, at that.

Wrong.

I have a videotape of the broadcast coverage by KATU TV in Portland Oregon.
They reran on the 25th anniversary of the event. It occurred near Florence.

There may be many variations - but there is one actual and true event.
The reporter covering the story was Paul Linnman, and the engineer in
charge of the "demolition" for the Oregon Highway Department was George
Thornton. 500 pounds of dynamite was used, which turned out to be
insufficient. They ended up burying the hulk.

From: Dennis Wade <103077.2724@CompuServe.COM>
Message-ID: <4aftmb$7is$1@mhafn.production.compuserve.com>
Source record: 244939

Greetings Scannists,

I had a thought and wondered if anyone had any experience or
comments.
I have a mil surplus discone which, based on its dimensions,
probably has a lower cutoff of somewhere in excess of 170 mhz, far
too high to ignore for my 25 to 545 mhz scanner.
What if I used a cable TV splitter in reverse (the passive ones
are bi-directional) to combine by discone with some other antenna
more suitable for 25-170 mhz? And while am at it, why not put a
10 db or so wideband pre-amp between the combiner and scanner (at
the antenna end) to help overcome feedline and combiner losses?
I can't be the first one to think of this one, and probably not
the first to try. Any experiences out there? Advice?

Thanks,
Dennis

3400. 200XLT and Alkalines ?

Newsgroup: rec.radio.scanner

jwayda@cogent.net (Jim Wayda) wrote:
>Curtis,
>
>Have you tried the new Skytel 2-way paging?

Yes. For one way messages it works great. The handshaking between the network and the pager assured 100% delivery of messages to the pager. However I noticed that I would often get one message several times, which was sometimes annoying. And we found that replies only work about 50% of the time at best - but the inbound messages are sent from the pagers 1 watt transmitter (take a guess on ERP with an internal antenna) as opposed to what, 500 watts ERP from the Skytel transmitters?

It probably depends.... I did carry my portable scanner/Ham 2M on a commercial flight once and they never said anything to me about it. But that was before all the new security precautions went into place. Hope this helps.

3404. Scout and AR8000, can't hear stations

Source record: 244949

Javiation sure did a fantastic job placing my recent order...
They sent it out the day I called and I received it three days
later on the opposite side of the Atlantic.

Also, UPS did a great job on the delivery. I tracked my package
with the number Javiation (Johnathon) gave me. (http://www.ups.com)
I saw it leave Javiation's shop, got to the airport there, then to the
airport in the States, over to my city, then out for delivery. At
that point my "Directional Observation Group Systems" (DOGS) took
over and I knew when the UPS truck was coming up the street. :^)

Many thanks to you all!

>2. Are there any breaks in the 150khz - 1900mhz (Are the Cell
>Bands
>blocked)?

The ones you buy here in the US have the Cell bands blocked.

> 2a. If Bands are blocked, is there a mod to restore?

Yes, get a computer interface for it and then get some software to make changes. There are some commecial packages available, or you can use my freeware program for MS-DOS, ar8util. You can ftp it from ftp.specialix.com, it's in the pub/misc directory and it's called ar8util.exe. Just use it to download the system area from to a text file and then use your favorite text editor to change the line for address 7700 and the one after it to all F's.

please also e-mail me ifn anyone finds it here. ill be greatly appriatvie of it.

i was told bearcat did somehting to the scanners to make it seem hard to the govt but really easy to mod. then again. i still dont see how they can ban the cell freqs esp since of the 1934 radio act.

>are bi-directional) to combine by discone with some other antenna
>more suitable for 25-170 mhz?

There are two problems with doing this:

1) You will lose at least 3 db in the splitter.

2) The discone will still pick up some signal from stations
below 170 MHz and the other antenna will pick up some signal
from stations above 170 MHz. Depending on the phase relationship
of the signals as they reach the splitter, the signals will
either combine in strength or cancel each other.

Instead of a simple splitter, you'd be better off using a 75 ohm VHF/UHF
separtor-joiner designed for MATV (Master Antenna) use. These cost under
$2 and look exactly like passive 2-way splitters, except that one input is
labelled VHF and the other input is labelled UHF. They are desinged for
combining separate UHF and VHF television antennas into a single line.
UHF signals will not pass through the VHF input and vise versa, so phase
cancellation between the two antennas will not be a problem. The insertion
loss on the VHF side is typically around 0.5 db and around 0.8 db on the
UHF side (up into the 900 MHz range). The ones I use have a crossover point
somewhere around 400 MHz, which means that signals in the 225-400 MHz range
are received through the VHF antenna rather than the UHF antenna. You'll
have to decide if that's acceptable for your application. (In fact, when
listening to that range, I generally play it safe and remove the thing from
the line altogether.)

These parts are in the Marlin P. Jones catalog if you can't find them locally.
(Radio Shack does not have them.) Be sure to get the 75 ohm version with
"F" connectors. Avoid those which use 300 ohm twin lead for any inputs or
outputs.

>departments, over to a new 800MHz trunked system.

There's a good side to this (maybe more than one!). First, many places that install trunked systems believe that their systems are digital and are therefore "un-scannable". Fortunately, this is a figment of the agency's imagination. Off the top of my head, I can only think of one major systems that is digital, New Hampshire. All the the others that I have heard of that are "going digital" in fact went trunked. Of course, YMMV.

Second, reports indicate that fully digital systems may not be ready for prime time, ie problems with digital modualtion. We'll see.

Is Delaware getting a Motorola system or Ericsson ("EDACS")?

For those interested in trunking, see http://comp.uark.edu/~plaws/scan/ (note: M-F daytime access is sloooow). Also, I'm looking for good articles on EDACS (and, what the hey, LTR) to add to my archives.

> friggin' box say "continuous" (except cell phone). I can't even punch
> in frequencies that do not fall on a 6MHz space. Anyone know how to
> correct this problem?

Change the Step size before keying in the frequency.

Select Channel
Press PGM
Press SHFT
Press Step until desired step size is shown
(If you want to change the mode from "default" just press Mode until the
correct one shows)
Press SHFT (to clear Shift)
Key in frequency as normal
Press ENTER

Away you go.

I think I am missing the humor of this analogy. The "airphones"
installed on airliners (or any aircraft if the owner wants one)
are designed, tested and installed IAW FAA requirements just as
any other communications system installed on the plane. Comparing
the potential for interference between an approved, installed
airphone system and "noisy" consumer electronics brought on board
by passengers is apples and oranges.

The power output of the types of radar that are used in fighter jets is very high. Most of the newer designs use a saftey interlock that prevents the radar from functioning when the aircraft is on the ground. There are also reports of motocycle police officers getting prostate and testicular cancer from leaving a powered up radar gun in there laps. All of these are examples of high levels of output power from the transmitter. RF energy is needs to be treated with care and can be harmful at high levels of exposure. 0.5 to 3 watts is not a high level of exposure but 100 to 10,000 watts is. The higher frequencies just make the effect more pronounced.

"SCN user" just mentioned that it started as a contstant carrier
with a "beep" about once a second. That would rule out most
battery revert alarms that I know of... the last thing I would
want is my transmitter being constantly keyed just to tell me
it was on backup power.

The original note did not give a complete description of what was
heard. Those of us that said repeater alarm or channel marker
were probably on the right track, given what we were told.

Yes, they can (and do).
I'm retired, and one of my favorite pastimes is to sit in on court
downtown (sometimes City, sometimes State, sometimes Federal).
Just last week, a driver was cited for Interfering with an Officer etc.
Seems he had one of these jamming transmitters on his car. The officer
noticed somethiong strange with his radar when aimed at that car, but not
with any other cars. He even re-positioned himself (he was a Motor unit)
to get a second shot.
The driver claimed that the device was legal, because he was a licensed
HAM, and he was doing radio research.
The officer pointed out that there was no way to communicate with the
device, as there was no modulator or on-off switch that could be used as a
keyer. He also said the driver had no method of recording any data in the
car, so "research" was kinda difficult.
The prosecutor showed that the device was one that's advertised as a radar
jammer, showed the advertisements that have been printed in various car
enthusiast magazines, and generally claimed that the only use for such a
device was in an attempt to jam police radar.
The driver was convicted and fined.
I got the impression, from the way the case was handled, that this is not
an isolated case (but it's the first I've seen).
Note, the driver was never accused of speeding, but with interfering with
an officer performing his duties. The Federal rules didn't enter into it
except as a defense, which got nowhere.
I thought it was interesting (and timely, too).

3429. Bringing Scanner+Freq. counter on airplane

Newsgroup: rec.radio.scanner
Date: 1995-12-11 00:00:00 UTC
From: daniel_l@ix.netcom.com
Message-ID: <4ag91f$76p@cloner2.ix.netcom.com>
Source record: 244969

I'm about to fly somewhere and I want to bring my scanner and my Radio Shack frequency counter on the plane. I do this because: 1- I like my scanner and my frequency counter and I know from experience how many creative ways baggage handlers can break them. 2- I intend to use my frequency counter before the plane takes off to get it's frequency and then to scan it later.

My question is, will the x-ray people get suspicious with the combination of the two? Also, should I keep them in a carry-on bag or keep them in thier belt attached carring cases? Another question is, how much(if any) interferance will the scanner or frequency counter cause to the plane's navigational instruments.

I had the same problem. After a certain point, the log file just had
trash in it. They said they would check and get back to me, and of
course never did. I am using it under WFW. I am sorry that I bought
it. I never use it any more. One of my biggest problems with it is
that there is no way to import or export the logs and memory banks.

There is no California law prohibiting the use of a scanner in a vehicle, but there is a City of Los Angeles law in the Municipal Code book Section 52.44 which states " Willfully listening to police and fire departments' portable radio messages - prohibited. " This only applies to listening of any Los Angeles city radio communications unless a permit has been obtained by the Chief of Police. The police usually use this law only against gang-bangers and other hoodlums.

> If they don't actually transmit, they can't work.
> If they do actually transmit, they are illegal as hell. (Please,
> transmitting to jam a legal signal *is* illegal, so all the legal beagles
> out there can cool it.)

One of the first Jammers to hit the market really did work. It transmitted a signal and disrupted the RADAR signal. FCC forced it off the market.

For the current crop, some are of the passive type and some are active. About the best any of them can do is reduce the distance to which you can got locked on by about 10%. Some actually increase the distance you can got locked onto!

Anyway, there was a review of them in a recent auto mag if you really need to know more.

3438. Radar detectors and trains...

Newsgroup: rec.radio.scanner
Date: 1995-12-11 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>

I ran into this about seven years ago and had since forgot about it until I saw some recent radar detector threads.

What is it on trains that sets off radar detectors? Seven years ago I made a trip from CA to TX on I-40. Much of the trip paralleled train tracks. I had a radar detector with me (since AZ and NM use it on the freeways). EVERY TIME a train went by, the detector started alarming. Trains coming at me in the opposite direction would set it off from a 1/4 to 1/2 mile away. Going the same direction, it would alarm when I was close to abeam the locomotive.

I thought it might be the EOT stuff. But I don't think that's microwave and I never noticed an alarm when the end of the train went by.

Mobile use of scanners and radar detectors is legal in California.

Some thing to keep in mind about using a radar detector in California. The CHP does not use radar on the freeways - with some limited exceptions. When you see radar in a CHP cruiser, it was paid for by local money for use on surface streets and highways where it's use is approved. Unless things have changed in last couple of years, the state does not pay for CHP radar.

The CHP's is a big user of aircraft for speed enforcement on freeways. It is a very effective method for them. I am always amazed at how many people they can nail on a two mile stretch of road by just having a plane go back and forth above it. I don't monitor much police activity with my scanner - but the last time I recall listening to air enforcement in northern CA it was on the "blue" channel (check a freq guide as I forgot what the numbers are for "blue").

Source record: 244980

Right now I have an ICOM IC-R1 and it works well, but I'm considering a new scanner purchase that will better serve my needs. I'm leaning towards the new AOR AR-2700 and I'd like to know from someone who has one or is very up on the tech specs of this scanner to answer some questions. Specificly I need to know if:

-can the AR-2700 can have a tone board mod done on it to ignore trunking beep?.
-can it be cell modified? (not super-critical for me)
-how's the sensitivity and how fast does it scan?
-it has 10 banks x 50 channels, can I engage several banks at once to scan, but exclude others, or can I only scan a single bank or all banks?
-power drain from the batteries? It takes AA's, how long will AA nicads last?
-any general opinions good or bad about this scanner, or would an AR-8000 be a better choice?

Thanks,

As a trucker I used one for several years,coast to coast driving.
It was called a radar detector "testor" to get around some legalities.
It produced less than one watt of power,as power is not required to
defeat radar.It produced random freqs in x and k bands and was quite
effective since it was activated when the first pulse of radar was
received.It was wired to the vehicle electrical system,so that when
the radar detector went off the drop in system voltage turned on the
transmitters.The main reason I no longer use it was the advent of
expanded radar bands and laser.Having had 17 weeks radar theory classes
in the military and as a former radar operator,I know that this worked.

3442. AR-3000 Manual & Software

The MVT 8000 is a brilliantly designed angled front panel, 200 channel ac/dc scanner. It has a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired. I use mine as a desktop unit in my office. Due to its small footprint, it occupies very little space on my desk.
It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz. It's got a 10 band search function, pass memory function, and other goodies found in high-end scanners.

Although seemingly assigned on the front panel by preset factory settings, searches are categorized to conform to channel numbering as follows:
Channel No. Band

1 FM
2 Air V
3 Air U
4 Ham V
5 Fire
6 Marine
7 Police U
8 Ham U
9 MCA
10 PRNSL (903.0375-904.9875)

Of course, you can change factory settings. It also has a battery save function.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. A new law outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. |

Deluxe scanners can be controlled and/or downloaded by a | personal computer, a feature which appeals to a small but | growing number of scanner owners.

Almost all low and mid-priced scanners are prone to | receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and | BC3000XLT portable work very well and are my current | favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 | channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. | All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu *
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a | warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two

companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, | published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The | 1996 editions contain selected business listings, too, | although callsigns are listed only for local government and | public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new | 3rd edition is expected in late 1995. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees,

listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the | sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about

$100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall

security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an

outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $27.00 per year, which includes the monthly Scanner Journal, approximately 50 pages in 8-1/2" x 11" format. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced | in advance. *

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 110 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Several people have been pleased with Electronic Repair Center, in Franklin Park, IL, which repairs scanners for a flat fee. Call them at (708)455-5105 to find out their current rates. G & G Communications (telephone 716-768-8151) is another scanner repair company. This family owned company repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements |
Dec 1995 - Radio Shack PRO-2040

Note: Reprints of Monitoring Times articles are available for $2.00 each from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin

19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end

circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good

scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line,

overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack

crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane

keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or

scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. | 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See | "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by | Uniden. Fair performance, but minimal image rejection. | Local oscillator harmonics account for spurious responses, | e.g., reception of cellular telephone calls in the 460 MHz | UHF-high band. Scans over 40 channels/sec. Can lock out | up to 50 channels from search. "Soft" on/off power | switching via keypad. See "The Radio Shack PRO-2040," by | Bob Parnass, AJ9S, in Monitoring Times, December 1995. |

PRO-2042: 1996 version of the wide coverage PRO-2035 base | with improved firmware and amber display. Made by GRE. | 1,000 channels, but cumbersome 100 channel bank size. | Tuning knob. NFM selectivity is still a problem but | improved over PRO-2035. 10 linkable search banks. Smart | Auto Store feature stores the unique frequencies. Can lock | out up to 200 frequencies from search. Query facility | indicates if and in what channel a frequency is programmed. |

Scan skips over empty channels automatically. Can sort | memories by frequency within a given bank. Overall, a top | grade scanner and second only to Uniden/Bearcat BC9000XLT. | See review in upcoming Monitoring Times. |

PRO34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO2022: Base/mobile scanner. Like the PRO2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes

on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning.

PRO-26: Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. Audio suffers from small

speaker.

PRO62: Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the

common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. | The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place

I like it. I would go for it. This way one dose not have to sift out things.

I would hope that your new group would cut the comentary. Posting would
look something like

460.0500 Anaheim Police Dept 103.5

and nothing else. More like an exchange of database information. Something
that is easy to append to large text files for the grep attack! Things like
this would save me hours of editing.

Hi,

Can anyone supply me with freqs that the courier companies use for their drivers and dispatchers in the Dallas/Fort Worth area? Especially for 2 courier companies:

1)DHL Worldwide Express
and
2)TNT Express Worldwide

I'd appreciate even a range of freqs that this industry uses so I can narrow down my search!

Thanks and Happy Holidays,
Vic

Most county governments in Ca. have a similar law. The only exceptions
are agents of foriegn governments, diplomats and the like - and Amateur
Radio Operators, who may listen to anything except cellular phone stuff
under the Electronic Privacy Act of 1984.

So if you dont wanna hafta beg a favor from the Chief of Police, get an
Amateur Radio License!

Interesting to note something else about the skytel system too...the two way format is best designed to work on about a 15 to 1 ratio of receivers to transmitters..here in the triangle of nc, the ratio might be 5 to1!! Motorola has just recalled all of the "tango" pagers since they have found that the battery life if you are on the fringe of the systems can be as low as 1 1/2 days!!!!!!!!!! apparently motorola knew about some of this before and now have no comment other than that they will have new units in customers hands by january.....

: Transmitting a signal legally is legal. Even if it happens to jam
: some other signal.

Not if you know that it is jamming another device. That is illegal,
even if you are transmitting on another frequency.

: >Most of the devices I've seen advertised are passive, and can't jam a
: >signal at all.

: Think "transponder." A passive device can still radiate a signal. If
: that signal happens to spoof the police doppler radar, "Mission
: accomplished."

A transponder is NOT a passive device.

Yes, a passive device can radiate a signal. A radar corner-reflector is
a good example. Unfortunately, the signal will be much below the level
of the signal reflected by the rest of the automobile, so will be down
in the noise.

That would be for one side of the conversation (I think) as the
airplane uses AM transmissions in the 120 Mhz range down to the
mobiles. I heard the AM transmissions when living in Norther
California and driving the 680 highway through Fremont on the way to
Tracy, Ca., but don't have the frequencies used here on I-15 in the San
Diego area.

Paul:

As the designer and programmer of the BearTracker 7, I'm just curious where you got the list of extender frequencies? I heard that Uniden was distributing them if you called their service center, but I'm not sure if that is still true. You could, of course, compile them by scanning and opening up the squelch. It's not a big deal, just wondering. Thanks.

"Reverse decoding," as you call it, is exactly what occurred with the BIOS for the original IBM-PC. They thought they could keep it proprietary. But someone locked some programmers in a room, told them what <functions> they needed, and let them go. After the came back with the code, the company (such as Phoenix and others) proved that the programmers had never seen any IBM code, didn't know anything about the IBM BIOS and, therefore, it wasn't an infringement.

This will happen with trunked radio control software.

Not true. A spinning 'corner reflector' would do just fine, because it would completely swamp any return from the rest of the car. Of course, the corner reflector has to be physically big enough to be a corner reflector at the appropriate wavelength, which isn't completely trivial.

> Getting back to passive devices, there is indeed a passive device which

> to the warning of a radar detector.

Not completely true. According to a Lockheed (Stealth fighter) exec, most of the radar reflections from a car (in addition to the radiator & engine) come from the headlights and the inside of the car (through the windshield & bouncing around inside the car). His suggestion: keep your headlights closed, use radar-absorbing (resistive) paint, and use an electrically-conductive windshield (bounces the radar into the sky). We concluded that although you couldn't (cheaply) reduce the radar cross section to zero, you could reduce it so much that if there were any other cars/trucks on the road, it wouldn't see you. However, if those other cars/trucks were speeding & you happened to be driving a red sports car, they'd still stop _you_.

I have a Bearcat 200 scanner which I use mainly for monitoring railroad frequencies for long periods of time in remote locations. I have two of the Bearcat NiCad battery packs for the unit, but they do not hold a charge for very long at all (I know about NiCad "memorization"). Anyway, I was wondering if there is a AA or AAA battery pack available for this radio, either from Uiden or a third party manufacturer?

Hello,

Is there any individual or organization that is currently fighting
the fact that it is now a "federal offense" to listen to cellular
phone calls? If so, what is the status? Who is it? On who's
behalf are they acting?

I would think it is fair to assume that the cell companies payed
Congress to create this law, but is it true? Where is the evidence?

I have heard now that in some *states* it is illegal to listen
to cordless phones. Is this true? If it is, I thought only the FCC
had the power to create such laws, not the state.

Comments welcome, thanks.

>The driver claimed that the device was legal, because he was a licensed
>HAM, and he was doing radio research.

At which point the driver admitted to violating Federal regulations. The upper limit of the ham band on 10 GHz is 10.5 GHz. Police radar runs at 10.525 GHz. He might as well have claimed that he was using his 146 MHz handheld doing experiments on a 155 MHz police frequency--either way, he was out of band and beyond his (revokable, mind you) privileges.

The passive devices were junk, infact most of them enhanced your radar
signature. The active devices on the other hand were quite effective,
when they worked properly.

I think it's still the blue channel. Simplex (car to car, or in
this case, plane to car - car to plane). It's FM. I haven't
listened to them do air work for quite a while - but I used to
hear the plane's side of the conversation in Pleasanton when they
were working the Altamont Pass and central valley.

They cannot use 120MHz (aircraft frequencies) to communicate with
cruisers on the ground. They are still bound by FCC rules and
such operations would be in violation of part 87.

These are a few freqs. that were given to me by a friend at WDW. I hope they
are still good:

operations F1(paging for cast members)-462.550
operations F2(monorail comm) -462.575
operations F3 -462.625
security -463.750 & 464.125
maintainance -462.650 & 462.675
resort communications -461.600
entertainment -463.975
Hope they work for you

Yes, they did, and now the exact same device has been repackaged and it being sold by ANOTHER company. Its reviewed in the Automobile Magazine article in the January 1996 issue, page 66.

Hello-

I'm doing some research into how people use the Internet to help them in their scanning hobby. I know I use it to locate frequency's in my area (Houston/Galveston), and I enjoy the tech talk in USENET.

If you would, please reply to this message (email pref) with a brief description of how you use the Net with your scanner. What are your favorite WWW pages? Gophers? Newsgroups?

Do you have a BBS that you call regularly that deals with scanning? (please give name and number, I'll probably call it.)

Do the major online-services offer anything for you?

Thanks for your help. Your comments and answers will appear in my column for a nationally distributed magazine.

Steven Baker

3491. Windows scanner software

Newsgroup: rec.radio.scanner
Date: 1995-12-12 00:00:00 UTC
From: mayes@gde.GDEsystems.COM
Message-ID: <4akp3j$frq@gde.GDEsystems.COM>
Source record: 244900

I am wondering if there is actually any GOOD QUALITY Windows scanner software out there. I have ScanStar for Windows and find it to be spotty in performance and usability. I hear some bad things about RCSI ScanWear as well. I had a demo version of it a year ago and it was pretty bug-laden.

My specific problem with ScanStar is that when I tell it to resume scanning, it sometimes leaves the radio locked on the channel and says (erroneously) "Scanning..." on the window. It seems to happen more on weaker signal channels. The only way to straighten it out is to go reselect the scan list. I also have had difficulty importing frequency data into the Data Manager. It doesn't recognize "FM", "FM-W", or "AM" properly.

Anybody have a reaction?

The restrictions probably won't go away anytime soon. The tighter
restrictions have come down with support of the FAA in just the
past couple of years.

> : It is just not a single device that can cause problems. It is the combo

>
> Please provide some documentation for this claim. I cannot find anything
> showing that such usage creates problems.

The FAA used data from RTCA, Inc., Special Committee 156, Document
number RTCA/DO-199, Volumes 1 and 2 entitled "Potetial Interference
To Aircraft Electronic Equipment From Devices Carried Aboard".

The information in this report contributed to FAA Adivisory Circular
91.21-1. FAR 91.21 is the rule prohibiting use of portable
electronic devices on board aircraft. The use of any device other
than those specified in the rule is subject to the operator/PIC
making the determination that it will not cause interference - if
have a doubt, they will prohibit it's use.

> Now, there is a reason why cellular phones are not allowed to be used,
> but it has nothing to do with aircraft safety.

FCC rules, part 22.911, prohibit the use of a cell phone on board
ANY aircraft while airborne. This is because the cellular service
is a land based system and airborne use causes harmful interference
to the network(s).

However, because a cellular phone is a transmitter, it is a
prohibited device under FAR 91.21. Since the airlines are not
able to get reasonable assurance that they won't cause trouble.
In AC 91.21-1 the FAA has told airlines not to allow any
transmitters to used on board.

> When I turn on my scanner near the computer - nothing happens. Neither are
> there any birdies on my general coverage receiver that are due to the

Can you say that about all scanners? My old PRO-33 causes
interference to my 2 meter ham gear when scanning multible bands.
I have never used it aboard an airplane.

> : What I think is funny is this whole thing of computers, radios, and

> interfered with the aircraft's navigational or communications gear.

You and I have more leeway when we are making part 91 flights. We
watch the portable equipment, we watch the plane's equipment, and
we don't always have to put the same faith in the radionavigation
equipment when VFR. I have never had a problem with my ham gear
on when I am flying either - you don't use your ham gear when you're
IFR, do you? Airliners always fly IFR. See 97.11 regarding the
use of ham gear on IFR flights.

Just wanted to point out that there is some documentaion and
regulation behind what the airlines are doing.

>Diego area.
>
>Jim
>

I would immagine that they would use the same 42 mhz frequencies as
the mobile units use.. Unless CHP is doing a mutual aid and the chopper
can goto "ANY" frequency they want.. From 42-44 MHZ, 140-174, 450-480,
500-512 (For LAPD) They also have 800 MHZ capabilities.. Not sure if it
is just conventional or trunked? So dont be supprised if you hear a CHP
helicopter or any law enforcement helicopter on any frequency.. Exludes
Amatuer Frequencies, unless the pilot is licensed :)

Frequency expansion aside, your friend should consider exchanging
his PRO-2035 for the new PRO-2042. The PRO-2042 I tested performed
like the PRO-2035 but has improved firmware features and an amber
display.

Look for a detailed PRO-2042 review in a future issue of
Monitoring Times magazine.

>about the scanner.

The Uniden/Bearcat BC3000XLT is my favorite portable scanner.
I've found it to have superior (but not perfect) image rejection
and intermod immunity. It's probably one of the easiest portables
to use and its 20 x 20 memory organization is a good match
for the way I program frequencies. Its high speed, smart Auto Store,
and reasonable bank size are the 3000's strongest features.

From the FAQ, "Buying a Used Scanner" --

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel
portable with 20 banks. Up conversion. Very fast scan,
search, and intelligent Auto Store. Mode, attenuator, and
delay settings programmable for each channel. 50
frequencies can be locked out during search. Larger
speaker than PRO-26 produces better, crisper audio. See
"The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in
Monitoring Times, April 1995.

Reprints of Monitoring Times articles are available
for $2.00 each from Grove Enterprises, PO Box 98,
Brasstown, NC 28902, tel. (800)438-8155. (Note: I don't get
any part of the $2.00.)

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional |
volumes by Hollins Radio Data, and sold at Radio Shack and |
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996 |
edition contains selected business frequencies, too, but |
callsigns are listed only for local government and public |
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local

agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical * Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available | from Official Scanner Guides (P.O. Box 525-NS, Londonderry, | NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, and organizations across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information

fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 50 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto

terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s]

missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

>Am I getting old? Why don't we just drive at the speed limit?

Well said, especially in light of the recent repeal of the threat of losing highway funds for having speed limits > 65 mph. With the rise in the speed limit to 70 or even 75, and in at least one case no limit, I imagine the market for radar detectors/jammers/whatever will decrease significantly. I wonder how states/counties will deal with the loss of revenue from decreased tickets being issued.

First of all, was this an early model 43 (no "A" prefix on s/n)? Your post didn't make clear which diode you unsoldered. I can't remember for sure, but I believe D5 was the one to pull, and it did not need to be reinstalled to complete the mod-just removed. Finally, did you unsolder the diode or pull it off. I fixed one once that had been pried on. The board has another trace under the diode, and when it was broken, the bottom row of keys quit. Fixing this one required purchasing a new board from RS, cost about $80.00. Also, you didn't unscrew the bottom board from the case, did you? These K'bds are sensitive to dust and if this was opened, it may not be contacting.

Hi,

I would like to bye some pretty scanner. I don't know which scanner is
better (in Europe market). First one is from AOR - AR2700 and second is
STABO XR-100 (i hope that is right).
AR2700 is much cheaper but only 10x50 memories, 500kHz-1300MHz
STABO XR-100 is more expensive but have 10x100 memories and 500KHz-1300MHz

If somebody have some experience with someone of these scanners, please refer
me your results.....thanks

For Immediate Sale IC-R1 used less than 3 hours Unblocked/Full Coverage
For Immediate Sale or Trade: *Selling as a Complete Package Only*
Will Consider Trade For Grundig Satellit 700 in similar mint condition.
All My Items Are In Mint Condition - IC-R1 used less than 3
hours!

DESCRIPTION
Retail Price
1 ea. Icom IC-R1 Full Coverage -
Unblocked $635.00
3 ea. Icom BP-84 High Cap. Batt. Pack1000 ma. 7.2volt $96. ea x 3 = $288.00
1 ea. Icom BC-72A Desktop
Charger $149.00
1 ea. Icom CP-12 Cig. Lighter
Cord/Charger $ 29.00
1 ea. Icom LC-61 Carrying Case (fits R1 w/BP 84 High Cap. Batts) $ 21.00
With Blank (Not Filled Out) Warranty Card)

Retail Value = $1122.00
Asking $500 or Trade for Grundig 700
Price includes UPS 2nd Day Air Shipping anywhere in the Contental US.

3515. More Jammer stuff

Newsgroup: rec.radio.scanner
Date: 1995-12-12 00:00:00 UTC
From: Brian varine <varine@ece.orst.edu>
Message-ID: <Pine.HPP.3.91.951212133131.26164A-100000@holmes.ece.orst.edu>
Source record: 244924

Okay, I've been away a few days and read the "Jammers" Thread a bit. It seems that some folks don't beleive that a Repeater or "transponder" wouldn't jam. Repeaters do jam, quite effectively. I've done Electronic Warfare for 6 years in tha Navy and 1 in the Army. Repeater are excellent for "spoofing" radars and making false targets, etc. These new jammers are passive, active, and repeaters. The passive one just don't work period, no use explaining why they don't. Active ones work, quite well. The newer ones transmit a very low power signal and add in a FM sawtooth signal to the center freq of the victim. This makes the radar believe the car is going from +200 to -200 in 2 seconds or so and remains blank. There are no radars that use pulses, they all use doppler and they don't have any type of DSP or filter to figure out the true signal, they go for the strongest reflected signal out there. The repeaters are just amplifying the incoming signal by 20dB?? or so and then applying the bogus signal, since the outgoing signal is stronger than the cars relected signal it overcomes the good signal and spoofs the radar. As for legality, I've looked quite a bit and found nothing in Oregon which would prohibit the device and since it's a low power it doesn't need a license according to the MFR. This seems to make sense since you can buy a Mr Microphone etc. that operate on FM broadcast band license free. I'm no lawyer but a cop that gets a blank reading wouldn't have PC since a blank reading is pretty common, esp. in instant on mode. So can a cop pull any one pull a car over on a blank reading?? I'd theres no cop thats even run up against a jammer so how in the heck could they know the effects. Now if you blow by at 85 and his display reads 35, well I'd say thats suspicious indeed.

re: Battery Low indicator always on.

Once you have exhausted all of the obvious things...
(Dead battery, broken battery terminal wire...ect..)

If you have the service manual for reference, check around IC-5 of the
Linear Board in the scanner.
It is set up as a voltage comparator. When the voltage on pin 9 drops
below the reference on pin 10 then the output on pin 8 goes high to the
microprocessor which then annunciates the "LOW BAT" display and beeps.
My service manual says that pin 10 should be around 2.3 volts and pin
9 should be about 4.5 volts (DC). If these are okay then the output
on pin 8 should be 0. If the inputs are okay and the output is around 5
volts then IC-5 is probably shot. If the voltages on the input don't
correspond the nyou'll have to trace back. Pin 9 comes from the 9 volts
battery. Pin 10 comes from an 8.3 volt regulator circuit. Both are
reduced to the required input voltages by dropping resistors.
Check this out.

I can assist you further if you like. Drop me an E-mail message.

I had one a while back, and with a cheap, low-gain antenna it works well.
It suffers from intermod, and I'm sure as with any R-1 post, you will get
alot of people badmouthing it. It is a good scanner, however, for it's
size. $200-$250 is fair, depending on the accessories it has. My advice
to you, though, is to use only the original antenna, or get a little
"stubby-duck" antenna like that on the opti scout, otherwise due to the
high sensitivity, and lack of filtering it will have a lot of intermod.
What can you expect, though, for a scanner the size of a candy bar?

Nate, KB9LSX

On Tue, 12 Dec 1995, Uncle Bob wrote:

> Am I getting old? Why don't we just drive at the speed limit?

Because the speed limit is a joke that no one obeys. Luckily the NMSL 55 limit joins Prohibition. Repealed 28 Nov 95. Now some states will keep the limit because they need the revenue generated by tickets and low limits. Others like Montana have done the smart thing ad established limits that are "reasonable and prudent" ie. no set limit. Now doing 120 will still get you a ticket in Montana so don't think it's an autobahn.

Easy, they won't raise the speed limit. Some states are staunchly opposed to raising the limit. The states that do will make up by harvesting other speed trap areas (bottoms of hills, etc.) The states have been making plenty of money off speed limits and there is no reason to expect them to not continue to do so. One way or the other, the states will task the police with revenue enhancement.

>* = Stock US model configuration

It worked on the 2005, but I'm pretty sure I did it on a 2006 and had it
work. It increased the speed to 40-50 chennels/sec.

: to the space between the existing diodes.

Have you ever modified a 2006? I have, two of them. The diode that restores cellular coverage also enables the 30 KHz spacing. The other diode speeds up the scan speed. I do not recall any place to add a diode between the other two.

re: Battery Low indicator always on.

Once you have exhausted all of the obvious things...
(Dead battery, broken battery terminal wire...ect..)

If you have the service manual for reference, check around IC-5 of the
Linear Board in the scanner.
It is set up as a voltage comparator. When the voltage on pin 9 drops
below the reference on pin 10 then the output on pin 8 goes high to the
microprocessor which then annunciates the "LOW BAT" display and beeps.
My service manual says that pin 10 should be around 2.3 volts and pin
9 should be about 4.5 volts (DC). If these are okay then the output
on pin 8 should be 0. If the inputs are okay and the output is around 5
volts then IC-5 is probably shot. If the voltages on the input don't
correspond the nyou'll have to trace back. Pin 9 comes from the 9 volts
battery. Pin 10 comes from an 8.3 volt regulator circuit. Both are
reduced to the required input voltages by dropping resistors.
Check this out.

I can assist you further if you like. Drop me an E-mail message.

: Congress to create this law, but is it true? Where is the evidence?

: I have heard now that in some *states* it is illegal to listen
: to cordless phones. Is this true? If it is, I thought only the FCC
: had the power to create such laws, not the state.

It is illegal in ALL states in the US - due to a fairly recent modification of the ECPA.

Some states have passed such laws, and most of them have not been tested in court. Also, many of them use the term "maliciously", or some other weasel word. In other words, they want people to think it is illegal at all times, when it actually is not. Note that this only applies to state laws about listening to frequencies other than celluar or cordless - which are covered by federal law.

> in progress.

San Mateo County's equivalent is announced as "a county-wide code 666".

All San Mateo County police agencies receive this broadcast on their primary channel. It seems like it has priority override on whatever regular transmissions might be in progress. The code 666 broadcast originates from the county dispatch center in the basement of the county courthouse/jail in Redwood City. After the details of the 666 are announced, units taking the numerous pre-arranged posts throughout the county are asked to switch to the green (channel). The participating units (cars) usually notify their own dispatcher which post they'll be taking before switching to the "green". The green channel is a county-wide common channel set aside for such situations (chases or "be-on-the-lookouts", or BOLs). All San Mateo County police agencies have the green channel on their radios. Oh, the green channel is on 488.8875 MHz.

They did a county-wide 666 just last night. The van believed to be involved in the kidnapping of a young Hillborough girl was reportedly seen headed southbound from the vicinity of SFO, as I recall. Last I heard, they didn't find the van (although I heard officers chase down a few "possibles", and rule them out), but the girl was released, and reported to be unharmed.

Soren,

When I purchased my AR8000 from Javiation it arrived two days after they shipped it. And, I was able to track it on the internet via the UPS Web page. At 1:25 pm on the second day I saw that it had just been delivered. I called my wife and told her that I knew the package had just been delivered. She couldn't believe that I could know about a package, delivered ten minutes earlier. Computers do have some uses.

I don't know how Christmas delivery will be. But, maybe you'll hit the two days as well.

Good luck.

Harold

Have 2. One is for mobile use the other is for bed time. Of all the
scanners I have owned---the 3000 is the best. Rejects intermod like a good
base scanner even with a discone at 70 ft. Great sensitivity- pulls in all
the uhf and vhf as good as the best.
With headphones or earphones audio sound clear and not so tinny. Back lit
green
screen. Super fast scanning, 400 channels 20 banks and you dont have to
adjust the squelch all the time !
If you must have one that is open for cellular- call Javiation in
England they
sell the 3000 for around $ 400 US and when UPS delivers , you will have to
pay a
small duty tax.
All in all in my humble opinion- the best hand held scanner out there
right now
is the bc 3000.
Have Fun

This is not entirely true. With the 13.8 VDC power being supplied, there
is still a small drain on the battery due to the low battery sensing circuit.
This even occurs when the scanner is turned on.

chmsam@aol.com (CHMSAM) writes:

>1). Use a good quality alkaline (NOT ni-cad) battery. Ni-cads actually

>Batteries need to have a certain level of milliamperes in addition to the
>proper voltage to be in good shape, and a volt meter doesn't really tell
>you the health of the battery that way.

This is good general advice, but not particularly relevant to diagnosing
your problem with the 2006. A good quality alkaline battery will last
longer in the 2006 than an inferior battery, but the low battery circuit
measures battery voltage, not battery capacity (or "health"). Further,
the current drain on the battery is so low in the 2006 that checking the
battery with a voltmeter is actually a more accurate way of determining
what the low battery circuit "sees" than checking it with a battery tester
(which measures the voltage under load). You can even use a voltmeter
to check the battery while it's still connected as long as you're careful
not to short the contacts.

Finally, the low battery alarm on the 2006 doesn't sound until the battery
voltage gets _very_ low. I installed a cheapie battery in my 2006 (the
ones Radio Shack used to give out free) and kept power connected to it all
the time. A year and a half later, the battery voltage as measured on

a voltmeter with the battery still connected to the scanner was between 5 and 6 volts, but the low battery alarm had not yet started sounding. (I know the alarm does work since it sounded as soon as I removed the battery.) When I placed the battery in a battery tester, it didn't even move the needle.

The moral of the story is that one shouldn't wait for the low battery alarm to sound before checking the battery. When the alarm does sound, it means that the battery is just barely capable of retaining memory.

As for the problem with your 2006, attach a good battery and try measuring the voltage where the battery wiring connects to the main PC board (using a voltmeter). If it doesn't read OK at that location, you've got a problem in the battery clip wiring. If it does read OK, then it's a problem in the scanner's circuitry.

If you have the AR8k & Scout setup up you could follow a cell call as it
chnanged cells only if you were within range of the mobile phone, for
example following in a car.

> STABO XR-100 is more expensive but have 10x100 memories and 500KHz-1300MHz

^^^^^^^^^^^^

Not sure which radio the Stabo XR-100 is. Provide a few more details if
you can although from that description it sounds like the
AR1000/2000, Fairmate HP100/200/2000, Camnis 10 under yet another
badge - I'll have to check but I would have thought this would have been
the "cheaper" model. It may also be the Yupiteru MVT-7000 under a
different name.

Stabo are a pretty large German outfit (CB, PMR etc). They did have
Yupiteru badge the MVT-7100 as the XR-700 I beleive so maybe the XR-100
is the earlier MVT-7000 which does not have some of the MVT-7100
features, mainly SSB.

Yeah, right...I've used fedex 7 times since September and have had only
TWO of those packages show up the next day as promised..they've really
fallen down on the job in recent months. The good news is that when they
miss the package delivery, my account doesn't get charged. Also, it may
simply be the Houston/Hobby office that's falling down..

For my money, Express Mail from the Post Office is the most reliable way
to overnight documents and small packages. Never had them fail.

Sorry, the local sheriff cannot make them legal. Intentional jamming is a violation of Federal law - over which he has absolutely no control. Of course, he can instruct his troupers to simply ignire such devices.

3546. Truckers Frequencies, Hway Patrol?

Newsgroup: rec.radio.scanner
Date: 1995-12-13 00:00:00 UTC
From: russm@Warren.MENTORG.COM
Message-ID: <4an5p5$73i$1@walt.Warren.MENTORG.COM>
Source record: 244800

Hi,

I am planing a trip this weekend from Boston to Chikago and would like to take my friends scanner with me for info/entertainment (I am driving alone). Unfortunately, I have no idea what are the freq's that are used by the truck drivers that I could listen to. Can any one help?

Also, if I caught you in a good mood ;), can someone tell me where I can find the freqs for the hway patrol along the way. I understand every police department has its own, but I've seen a Bear Tracker that has those frequencies preprogrammed for each *state*, so that you only input the abbreviation for the state you are currently in (like MA, NY etc.).
What are *those* frequencies?

Thanks for your replies,

/Papa

Message-ID: <4an6k6$g3t@news4.digex.net>
Source record: 244803
Cross-posted to: rec.radio.swap,rec.radio.scanner

FOR SALE:

Uniden BCT-7 BearTracker 800 mobile scanner. Service Search (Police, Fire, Highway, DOT, NEWS, Weather, CB, Private). 100 programmable channels. Search bands CB, 29-50, 118-137, 137-174, 406-512, 806-956Mhz. Up to 50 frequencies can be locked out during search, very convenient for birdies or data channels. ALERT Light and Beeper warns of any nearby highway patrol vehicle' s mobile extender. Yes it does work, but range varies by terrain and antenna used. The News and CB feature have been the most useful features, especially during rush hour.

Reason for selling, putting Pro-2006 in car since most of my scanning is mil-air.

Excellent condition, 4 months old. $100 and I'll ship continental US.

Andy

In my part of Texas, the big threat has never really been getting caught
speeding on an open hiway, but in the small 'speed trap' towns on
state roads. It is not at all unusual for the speed limit to drop from
55 to 25 for a period of about 2 miles before jumping back up to
65. Those are not going to change because of anything the federal
government has done recently..

The revenues are safe and I still need my detector.

Well, no sooner did I send that off, then did I think of the town of
Lavon, which is Northeast of DFW, which does exactly what you claim. In
fact, they were one of the towns that caused the Texas Legislature to
change the limiting the amount (percentage) of revenue towns could collect
from motor vehicle fines.

Well I'm pretty much a neophyte at this myself, so you can take it for what it's worth, but I highly recommend the PRO-51. I got mine on sale at RS for $199 and am very pleased with it. It's got plenty of features without being too complicated for us newbies.

From: cahill@lkg.dec.com
Message-ID: <4anfh8$9ms@nntpd.lkg.dec.com>
Source record: 244817

Does anyone have a list of the known birdies for the SportCat scanner? One of our local FD frequencies is 33.66 MHz, which just happens to be a frequency the SportCat seems to have have trouble receiving. If I take off the antenna, the channel is quiet, but with the antenna on, the scanning always stops on that particular channel.

Do you have a SportCat scanner? Try entering this frequency and please let me know if you're also having the same problem.

Thanks!

Please post the details abouth that crash all those years ago.

You will not be able to, because it never happened. Transistor radios can
be used on some flights on some airlines. Frequently this decision is
left to the captain, but some airlines ban their use altogether (along
with the use of some other electronic items.

The use of these items does not interfere with ANY ground control
functions, the controller on the ground is not going to know that these
devices are in use, whoever said that is a dunce.

I have asked for and received permission to use an ICF2010 on board
several flights, and that is a transistor radio. I have also received
permission to use my AR1000 on board commercial flights.

BTW, the reception on board a commercial airliner is pretty bad, about
the only thing I could receive clearly was the pilot to ground
communication of the flight I was on.

Does anyone know of a MOD that changes the dimmer switch function from high/low brightness to turning on/off the display lighting altogether. I use my 2006 with the OPTO 456 and generally leave the radio on for several days at a time. Since I don't need to use the display on the radio when the OPTO's in use I'd like to be able to turn the luminesent display off completely.

Thanks for the help!

Paul Hancock

You were not real clear as to whether or not you were talking about
interference from the PC or the scanner. The statement to which
you were commenting was discussing numerous electronic devices
being used at once, not PC or scanners excuslively.

And I am sorry if I deleted something you felt was important.
However this thread is not that old - anyone that wants to see it
all from the beginning, should be able to do so.

NO THE 2021 IS NOT CELLULAR MODIFIABLE, BUT YOU CAN BUY AFTER
MARKET CONVERTERS THAT ATTACH TO YOUR ANTENNA AND CONVERT
THE CELLULAR FREQUENCIES TO THE 400-500 Mhz AREA.

>yes what you are hearing is the New Erickson EDACS system being operated
>in the NON digital mode. When they are in DIGITAL, we hear open squelch
>noise only.

So when is EDACS sopposed to be completed? From what I hear it's
quite an expensive system and as much as they'd like to allow other
stations to share in with this system, it'll probably some time before
other stations receive this "gift". How will this effect the local news?
First the police go digital, who next? Will scanners be obsolete within
the next 8 years?

Thank god we're blessed with cell in very high 800's, but then
again I wonder how long'll that last.

Based on their demos, I wasn't impressed with either of these programs. I would start with the AR8Util available as shareware from Compuserve (maybe others as well). Sometime in early 1996, Radio Manager for Windows, also shareware, will be available to control the 8K. I think that program will be very good.

I'm using the CX12AR interface, and, as long as you have the right cables, it works very well.

Hope that input is helpful.

Harold

I don't think it changes the scan speed, the other diode enables 30kHz steps
when scanning the cell band, although this cannont be selected with the 'step'
button, it does got to 30kHz step, and display 30kHz on the display when you
scan the band and use the defult step size by pressing 'reset'.

(.... apparently.... 'cos of course I havn't tried it, it's illegal.)

>would like to enter my own band search ranges.

I think you will find that these are "canned" (or maybe "chipped" is a better descriptor). As far as I have been able to determine, these ranges are preprogrammed in the microprocessor and are not meant to be modified. The same goes for the similar bands in the Pro-2038.

You can program the Limit Search to your hearts content, though. The Band Search will catch the obvious, you can program the Limit Search to catch the rest, bounce what you find into Monitor Memory, and then into one of 100 channels. I am not saying it is absolutely impossible, I just don't think (in my experience) that you will find that it can be done easily (without a microprocessor swap).

The manufacturer's part number for the EL panel in the 2006 is : GE-88D-7738

Reference Number (on Schematic) is: EL501

This info is from the 2006 Service Manual. I would assume that the 2004
probably uses the same EL panel.

>Dallas, Texas 75265
>"Statements made here are my personal opinions; I do NOT speak for TI"
>--

I wonder if it is just 'undiscovered' rather than being 'impossible'. I have seen two mods posted for the 2026. The first one cuts the jumper L201 on the main display board, the second cuts a diode on the same or similar board.

My unit has the J201 Jumper. Before cutting the jumper, the scanner beeps and displays 'error' when attempting to enter a frequency in the locked-out area. After J201 is cut, the scanner will program with the frequencies in question, but do not appear to actually receive these frequencies (no audio).

Since the frequencies are accepted by the microprocessor (with the J201 mod), there may be a 'two-stage' mod required to re-enable audio, or IF, or whatever is missing from the radio side of things. I just got this scanner and haven't spent any time trying to track this down, so I am not sure.

Does anyone else have any specific experience with the different versions of the PRO-2026? Mine has a Radio Shack logo in the upper-left corner or the front panel (instead of the older "Patrolman"), the RS part number on the box (20-148) as an "A" attached to it, but the date code 11A3 seems to indicate manufacture before 4/94.

Inside, the main circuit board has an "X" written on the bottom in felt pen, and the microprocessor/keypad board has the letter "B" written in similar fashion.

Anyone have more to bring to the 2026 party?

Steve

Two thoughts:

1. Money spent on tuned antennas are much more efficient for the dollar spent. Power costs a great deal more for not as much range.

2. Increasing the range of a 49 mhz device in an area saturated with 49 mhz RF is rather like yelling louder at a football game, yu can spend a tremendous amout of energy only to be ... not heard.

I agree
So it's illegal to monitor Cell phones and all that, but as long as you only listen for your personal enjoyment, you won't have any problems. I have copied music tapes and movies, just about everyone does, but if you start selling bootleg tapes that's where they will crack down on you. The main reason cell phones are illegal to listen to is because some politicians have had their "secrets" revealed by the media when talking on the phone.

3598. FS: RS Pro-2025 Mobile Scanner

Newsgroup: rec.radio.scanner
Date: 1995-12-14 00:00:00 UTC
From: prografx@teleport.com
Message-ID: <prografx.490.0006AD68@teleport.com>
Source record: 244697

I have a Radio Shack PRO-2025 mobile scanner in nearly perfect (and almost unused condition) for sale. The scanner has 16 channels, LED readout with frequency read-back, front panel keypad and independent volume & squelch controls and covers the following bands:

29-54 Mhz

137-174 Mhz

406-512 Mhz

Plus it will independently scan the Weather band. It is directly programmable (simple & straight forward), and has channel priority and lock-out features

I will have to check to absolutely verify the edges of the bands above, but this is approximately its coverage. It works perfectly, and I was using it primarily for 2 meter and 440 Ham repeater monitoring and VHF Public Safety.

Comes with 12Vdc cord, mounting bracket, and mounting hardware in original factory box. Sorry, no manual but you don't really need one, it is that simple to operate.

First $75 (not including shipping) takes it.

3599. Pager Question

Newsgroup: rec.radio.scanner
Date: 1995-12-14 00:00:00 UTC
From: zombie7@ix.netcom.com
Message-ID: <4aojrm$nrv@ixnews3.ix.netcom.com>
Source record: 244698

Sometimes I get beeps for persons other than me. Other times I miss pages that people sent me. I'm curious as to how they work. I know you're supposed to call the beeper number, then key in the number you wish to be called at. Then what happens? Does a person punch in the information to a computer, or does a computer do all the work? Also, how do alphanumeric pagers work - do you speak your message to a person who then types it into a computer or what? Does anyone know where I could find more information on how the pager actually works? I'd appreciate any help. Please email any responses. Thanks!

Hi Ken,
the answer to this is yes... and no!

AOR has been active on the net for about six months and may be contacted at

info@aor.co.uk

A web site has been allocated too but the site is still under construction
and the files have not been posted to the server *yet*. The site will
become active early in the new year.

We plan to place sales information, modifications, demo software etc for
download.

The site URL is: http://www.demon.co.uk/aor

Regards, Richard

>Thanks for the help!

>Paul Hancock

Try This:

R504 (150 ohms) and R505 (47 Ohms) on the Logic & Display board determine the illumination brilliance at each of the two Dimmer Switch settings. From the schematic, it appears that removing R504 entirely will extinguish the display illumination when the Dimmer Switch is depressed.

This would make your scanner match the functionality of the later 2006 scanners, which replaced the Dimmer Switch with a Display On/Off switch.

I can only suggest this mod. It appears to be a safe one, and only effects the display illumination circuits Vcc voltage. No guarantees, but I think this will do what you want.

The type of reception you are looking at is all VHF/UHF. Unless you are interested in some of the other SW servies I would get a scanner. However if you get your No Code Tech Ham licence you can talk to the Space Shuttle using a simple 2m setup. All you need to buy is a Radio Shack Ht-202 and there 30 watt linier(sp) amp, and a good antenna.

Thanks

This problem seems to have only appeared on early AR8000 - later ones
(since early '95 ?) do not seem to have this problem. New keypads are
generally available for a small cost if you cannot obtain a "freebie" !

The keypad is pretty easy to replace. Open up your AR8K by removing the 2
screws in battery compartment, and 2 of the screws down the side at the
top (from the same half). Separate the front from the back or the back
from the front whichever you prefer. Take the front half and remove the
five bright brass screws holding down the PCB. This will lift out - be
careful with the speaker connected at the top right. The keypad will now
list out and a replacement can be put in place.

>
>Tom
>

On several flights over the years, i have used radio receivers, usually to listen to FM. A few airlines now allow for radio receivers above 10,000 feet, such as Reno Air. AM/FM reception can be very interesting on board a flight, esp at night on AM. Haven't tried a scanner.

If an FM radio IS used, is is a good ides to keep it tuned below 97 MHZ, so the oscillator signal output, which can be VERY strong on some radios, such as a sony 2001, is kept below the VOR frequencies which begin at 108.2 MHz (keep FM radio 10.7 or 10.8 MHz below 108.2, and you will probably never interfere with the Navigation aids aboard, though oscillator harminis might interfere with ILS equipment, used on approach landings (which is why they wany you to shut off the radio below 10,000 ft alt.

Some planes emit garbage through out the radio spectrum, making listening terrible. Other planes are remarkably quiet, making reception fascinating!

73,

Steve

A poorly designed receiver can cause interference to other radio services. Even a good one could problems with aircraft system if it was malfunctioning - and you may not know it's malfunctioning. I have tracked down interference on the job and found, on more than one occassion the offending device to be a "harmless" clock radio on someone's desk.

What I find funny is how many people are "amazed that the radios on airliners are not made to be immune from interference." Well, how do you build a receiver that will be "immune" from interference? If I have a receiver or peice of navigation equipment tuned to 120 MHz, and some guy in the back of my plane has a device generating a signal on the same frequency, how do I block that interference without also blocking out the signal I am trying to receive?

Interference might be overrated most of the time. But you don't want to find out that you have a problem during final approach into Buffalo during a blizzard.

>This is not true. Electronic devices were band due to the air crash caused

>call.

The original prohibition was Federal Aviation Regulation part 91.19. It was written in the 60's or early 70's when portable, battery powered FM receivers were becoming popular. The concern was that the receivers might cause interference to the VHF navigation systems on the aircraft.

It was probably a justified concern since a 10 MHz IF can put the fundemental frequency of the local oscillator right on a VHF aircraft frequency. Harmonics could end up on other frequencies used by aircraft such as a glideslope operating in the area of 300 MHz.

The current FAR prohibiting the use of portable electronic devices is 91.21. It prohibits the use of ANY portable electronic device on board an aircraft with five exceptions:

(1) portable voice recorders.
(2) hearing aids
(3) heart pacemakers
(4) electric shavers
(5) any other portable device that the operator of the aircraft has determined will not cause interference with the navigation or commincations system of the aircraft on which it is to be used.

The reg goes on to mention that in the case of a air carrier certificate holder (an airline), the operator (the airline) shall make the determination for item 5. For other aircaft (such as private, general aviation) the determination is to be made by the pilot in command or other operator. What this means is that if the airline company bans a certain type of device, the airline pilot is supposed to follow that policy.

>Most airline now currently allow the use of a great many electronic devices
>during flight (although most still restrict their use during TAKE-OFF's and
>LANDINGS).
>
>The funny thing is, transistor radios are STILL prohibited :-) Probably a
>holdback from that airline crash oh those many years ago.

See above regarding FAR 91.21. A transistor radio is prohibited if it does not fit into one the 5 exceptions. And since transistor radios were more or less the reason the restrictions were put in place, why would it change?

As far as the guidelines used by the airlines go... the FAA has provided their guidelines in Advisory Circular 91.21-1.

I'm not so sure that ticket revenue will go down.
My personal belief is that those who speed don't do so to go a certain
speed, they do so to go faster than the others are going. Raise the speed
of the others, and the speeders will still speed, to go faster than
everyone else.

It's my opinion that, unless any data gathered by such monitoring is
actually *used*, no one will care, or, if they *do* care that no one in a
position to officially do anything will do so.
My opinion, of course.

OK, once and for and for all... The two diodes are for two different mods.

D502 is for opening the cell bands. The built in freq map has 30khz spacing
already, and clipping D502 tells the CPU it is ok to enter freqs in the cell range.

D503 is a speed limiter for the unit. I don't have any idea why they would put
it in the unit in the first place, but that is its' purpose. By clipping the diode, you
will jump from 26 channels per sec to 30 cps... It sounds small, but it is noticible.

Adding a diode to 501 empty socket does NOTHING! That was a 2005 mod...

There is one other speedup, you can replace the clock oscillator crystal (12mhz
on the 2006) to a 16mhz one. NOTE! There are side effects!. The delay before
restart of scan after a signal goes away is now useless.. The 16mhz crystal
actually speeds up the timing, so the 2 sec delay is like 1/2 a second..
The mod yeilds about 45-50cps or so I have been told...

I personally dont want that type of side effect, and will live with 30cps...

-Good luck!-

2006 w/Cell Mod-Speedup Mod-Analog S/Meter-Improved Headphone Mod-Data Squelch Mod
Soon: LinkAll 25,600 chan mod and CE232 mod.

3634. Re: Outrageous claims/BCT-7??

Newsgroup: rec.radio.scanner
Date: 1995-12-14 00:00:00 UTC
From: scanmaster@aol.com
Message-ID: <4aq5jn$7h@newsbf02.news.aol.com>
Source record: 244769

The concept behind the BCT-7 is that it doesn't matter what type of speed-measuring device a highway patrol unit is using, because they will always have their two-way radio on -- which is what the BearTracker detects (actually the mobile extender of the radio system as well as selected other frequencies). Because the alarm circuit only works with state police and highway patrol agencies, and because only 40 out of the 50 of these agencies use extenders, the claims seem a bit overblown. The concept is sound, it's just that the qualifiers to the statement should be made. Also, depending on which state you're in, you will have varying luck as far as how often you receive alarm hits. The BearTracker is not foolproof by any stretch, but it does provide an excellent companion to a radar detector, not only for its alarms, but also by providing pre-programmed frequencies and a lot more.

869-895 are the cell phones, 895-915 are the same calls but received on
the "image" frequency. Your IF frequency mosty likely is around 10MHz
which would account for the 20MHz difference. Any thoughts Bill?

Well folks, I've decided to take a whack at regionalizing the
coverage of some of the scannerings that go on around me. I've
created mailing lists for the scanner listeners from the counties
of Middlesex, Essex, Plymouth, and Worcester here in Massachusetts.

To subscribe, send a message like this:
Essex:
To: scan-esex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Middlesex:
To: scan-msex-request@nomad.n-reading.ma.us
[Message body]
subscribe

Plymouth:
To: scan-plym-request@nomad.n-reading.ma.us
[Message body]
subscribe

Worcester:
To: scan-worc-request@nomad.n-reading.ma.us
[Message body]
subscribe

If you have an interest in another area of coverage,
I can create a mailing list to cover that area.

It is most likely receiving the transmissions of the dopler radar from
the wheel slip sensors in the newer locomotives. The dopler radar
checks the speed of the train along the ground and compares each axle
with that speed and corrects wheel slippage via high current relays or
solid state devices that drives each axle. Buddy Trader,

Here is more info I forgot to sent you:

At a meeting called by the City Building Department, All agencies were told the following:

1) Honolulu Police is the lead agency. They will be working the bugs out once they are fully on line.

2) Request to go on will be on a public safety basis first.

3) All users going on will also share the cost of the system (maintanence) to be determined.

4) The vendor has guaranteed the city radio prices for 3-yrs.

when the bids were opened, I attended as a spectator. I do not have an interest other than your in this system. The results were as follows:

Low Bidder: Erickson: Just under 20-million

Other Bidder: Motorola: Just under 27-million

I will be posting more details in an upcoming new radio scanning publication.

In an addendum to my own reply, I have some egg on my face! I found that the
12Vdc power supply I was running had failed, and was only delivering about
7.5 to 8 Vdc to the scanner. The scanner operated fine on other bands, but no
audio was present on active channels previously locked out.

When connected to a STIFF 13.8Vdc supply, the scanner picked up the previously
locked frequencies just fine. The above mentioned circumstances regarding the
codes and age of the scanner are correct, but the "Cut L201 Mod" apparently
DID work after all on this particular scanner. I guess 11A3 didn't get
rebuilt after all!

My brother recently got back into scanning out in Suffolk county on Long Island. When he went to listen to the county police on the freqs that he had previously heard them, they wern't there. He's been at it several weeks now and still no sign of them. Any ideas as the where they went??

Thanks,

Scott

3649. AR8000DX, I.F. filter mod

Newsgroup: rec.radio.scanner
Date: 1995-12-15 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4asg0b$klm@mrnews.mro.dec.com>
Source record: 244584

I have just read about the AR8000DX mod from the http://www.lowe.co.uk/
that switches the 2.4Khz filter on while in the AM mode.
When I owned a MVT-7100 I had this same mod. the 7100 was purchased
from a dealer in Germany. This dealer also sells the AR8000 with a
2.4KHz filter mod but would not sell unless the radio was purchased from
him.

Does anyone know how to do this mod? Is it available at a ftp site?

>Washington? Thanks

Do you mean the new police frequencies? If so, I don't believe they are operational yet. Also, the rumor I heard was that all King County agencies are going on the system (40+ agencies) and that they are going to be spread across a wide piece of spectrum, and that the system will be digitally encoded.

Pgoelz (pgoelz@aol.com) wrote:
: I must have been away from this longer than I thought..... what is a
: "mobile extender"?

Paul, the "mobile extender" is just a low power repeater that is attached
to the vehicle's 2-way radio. It allows an officer to carry a small
handheld radio that transmits on one freq to activate and communicate
with their dispatcher on another freq thru the vehicle's higher power radio.
Generally used by agencies that use low band for the mobile units. The extenders
are "active" whenever the car is in-service (and sometimes when it is
not...).

Many of us use our scanners as "police car detectors". All you need to do
is program in the freq for the extender and then you know that if you get
a hit on that freq you are within a mile or so of a police car that is
equipped with an extender. I usually place the extender freq at the start
and in the middle of the scan bank that contains the freqs for the CHP.
If I get a hit on one of the car-to-car or base-to-car channels I'll hit the
scan button to see if I get a lock on the extender freq. If I do then I
know a unit is around. If I don't...

I made a big mistake in purchasing a new (last month) PRO-51 scanner and
have been looking for mods ever since. I just picked up the Dec. issue of
Monitoring Times, and it has 2 Scanner Converters for sale. They claim to
move the 800-950 mhz stuff to the 400-550mhz range?!?
My question is do they work with the PRO-51 scanners? If so, how well?
1 last question, does anyone have suggestions into which company
makes a good converter?
Thanks in advance,
Clown
P.S.
If anyone has this issue the advertisements are on pages 19 and 51.
There is also something on page 90.

>
>It worked on the 2005, but I'm pretty sure I did it on a 2006 and had it
>work. It increased the speed to 40-50 chennels/sec.
>
>
The 2005 has a different configuration than the 2006...

This is straight from CHEEK's Ultimate scanner book.
Clip the two diodes... DONT add the diode like the 2005, as it does nothing
for speeding up the radio. It MAY do SOMETHING, but as of publish date, noone
had figured out what if anything it would do...

BTW: The 2006 is rated (stock) at 26 chan per sec. This mod will allow for
30 cps... The ONLY way to get any faster is a crystal change, and that is not
for everyone.. It has too many side effects..

There is another option.. the 'LINKALL' module that allows you to go up to 25,600
channels (64 banks of 400) has a really cute mod. It has botha 12mhz (stock) and
a 16mhz crystal. When in scan mode it jumps to the 16mhz and really flies. When
it hits a live one, it stops the scan and switches to the 12mhz to keep everything
else working (i.e. delay etc..)... There is a switch on the back that selects 12/16
or autoswitch...

If anyone is interrested, check it out in the scanner manual, it can be ordered from
Mark Persson
1369 Lombardy Blvd.
Bay Shore, NY 11706

Cost: 1mb SRam $25
Linkall Controller $95
```

Installed for $50
AND, it doesn't have the ugly little bank of switches on the front, it is controlled by the keypad... Totally cool!

You may want to look at some of the other posts here... There is a company in Canada that must have bought a few and are reselling them..
I bought mine in Canada about two months ago and paid $279.00(US) NEW and walked it back across the border. Radio Shack Canada was having a closeout sale on them, and I had to get one! Forget the 2005, jump on the 2006 or 2006/a (They are identical except the 2006a dimmer switch shuts the backlight completely off).

Get one, they are FANTASTIC!

2006 with Cell mod,improved Headphone mod,S-Meter mod, Speedup Mod
Soon: Linkall 25600 ch mod, CE232 mod...

I have the GRE Super Converter II. It works with any scanner that has a
BNC connector and receives from 410 to 512. What it does is connect
between the radio and the antenna. Anything on the 800 MHz band you will
now receive 400MHz lower.

: scan the band and use the defult step size by pressing 'reset'.

: (.... apparently.... 'cos of course I havn't tried it, it's illegal.)

: TD

Guys, I've done several 2006's...the diode data is correct...one diode
enables cellular, and also 30 Khz steps(actually, the diode has nothing
with the 30 Khz part;the CPU automaticly selects the 30 Khz step when the
cellular frequencies are being used).
The other diode does indeed, enable a modest speed increase(the stock
unit does 13/26, after the diode clip, it's more like 15/30 cps).
So go ahead, clip both diodes, and enjoy!
P.S...the poster with the list of diodes is incorrect:that list is NOT
for the 2006!

3674. What scanner would you recommend?

Newsgroup: rec.radio.scanner
Date: 1995-12-15 00:00:00 UTC
From: hip1@expert.cc.purdue.edu
Message-ID: <4arghg$s50@mozo.cc.purdue.edu>
Source record: 244609

A friend recently introduced me to scanning and I am going to purchase a scanner in the next couple of weeks, but there are so many choices. What would you recommend? I would like a scanner that has a very broad range of signals including cellular and cordless (excuse me for possibly not using the correct lingo, but I will shortly!). I don't have a dollar amount that I particularly have to spend, however the less expensive the better. I would appreciate your input! Thanks.

Sean

Anyone else bothered by this line of discussion? If I'm on an airliner,
I DO NOT want to have to trust that someone else will be responsible with
potentially disruptive electronic equipment in order to have a safe
flight. I include radios, cellular phones, handie talkies, and scanners
in the "potentially disruptive" category.

While there are many more options today than 20 years ago to detect
whether the navigation equipment has been disrupted by on-board
interference, why take the risk? Is one individual's entertainment worth
the risk?

Paul

PS: For the record, wasn't it the mid air collision over New York in the
60's (?) that pointed out the need for the prohibition of radios?

They are talking about PL tones. They are subaudible signalling tones
used to block out unwanted conversations. For PA, the state police
use 186.2 for most of their comms. I have the item you were talking
about. It is just like the BC-350A mobile scanner, and the BC-700,
with the added ability to monitor the PL tones. You can pick up CB's
on this thing too. It works fine as a scanner, but that alert thing
is pretty much worthless. I live in a town of about 15,000, and it
goes off alll of the time. I wish there was a way to adjust the
sensitivity of this thing.

Sure, the highways are filled with people who will drive with reckless abandon, but the fact is many people cannot/will not drive over 75. For example, my CJ-7 will not go over about 65. Even a small reduction of say 2-3% in ticket revenue, will be significant.

3688. 2006 or 2035?

As a PLATNUM member of American Advantage, I have traveled over 500,000 miles
with all sorts of bizzare electronics on board.. Two meter handi talkie, scanner,
laptop etc...

The current company line by American is.. If it is carry on, and you keep it
put away (as ANY radio is illegal to USE on the plane - even an AM transistor
radio) then you can carry it on. They understand the problems with checked
baggage, and will let you put it under the seat or in the overhead...

BTW: be prepaired to turn it on at security check point if they ask you to...

> I am in the NFM mode and this happens all over
>the spectrum on the stronger signals...

First, make sure the batteries are fully charged.

Having read similar reports from other AR8000 users,
I measured the modulation acceptance of an AOR AR8000 and
found it lower than for most scanners. Low modulation acceptance
is a predictor that wider (higher deviation) NFM signals
may "chop out of the squelch."

See the Scanner Equipment column in Nov 1995 Monitoring Times
magazine, which includes a bar graph showing a quantitative
comparison of modulation acceptance for the AR8000 vs.
other scanners.

In the Dec/Jan 1995 issue of USSN, Steve Donnell discussed
the problem and suggested replacing an IF filter in the
AR8000 as a countermeasure.

Anthony,
The numbers are different for each Boro unless you are
talking about a citywide unit. If you e-mail me specific questions I'd be
happy to give the proper channels. Any questions you have could be
answered in the scanner master ny metro edition

Jim,
I just fired up my SportCat in my office, which is in the basement of
a building (mostly underground to start with) that has lots of
computers, a substation on the other side of my office wall, and other
nasty things that make a scanner useless. My SportCat does not stop on
33.66 in scan mode. Date code is OCID.

3712. 2006 Rechargeable Battery Help Needed

Newsgroup: rec.radio.scanner
Date: 1995-12-15 00:00:00 UTC
From: kcampton@cats.ucsc.edu
Message-ID: <4ashs8$5bs@darkstar.UCSC.EDU>
Source record: 244720

I tried getting help from three different Radio Shacks without any success. All I wanted to know is what they would recommend I use as a rechargeable portable power supply for my 2006. One answer was to use two 6-volt gel cells. O.K. that made sense and they were not overly large and heavy. But, I couldn't get a straight answer on what to use as a recharger. Another helpful answer I got was to use a motorcycle battery. Great. Not only bulky, but heavy too boot!

I'm sure there must be others who have come up with a solution to this matter, so I thought I'd write this post. I would either like information about an existing product that is reasonably lightweight and portable, (not a motorcycle battery - preferably long and slim so that it will fit next to the scanner in the bag I have for it), or advice on a type of battery/charger combination that I could cobble up for this application.

Thanks in advance!

K.C.

You might look into the video/camcorder accessories for this type of thing.

I saw a guy who had a nice unit that was not much larger than a VHS tape
and it had a 12 adapter jack and an accessory for charging. I think it
was originally purchased for running video lights for home videos.

Only thing to keep in mind in the output voltage to match your requrements.
I do not know how low a voltage you can go on that DC jack but it might be
as low as 10V -- some camcorder stuff is running at 6V and 7.3 Volts.
Then, of course, you will have to go to RS for the right plug.

3714. AR8000DX

Newsgroup: rec.radio.scanner
Date: 1995-12-15 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4asksm$req@mrnews.mro.dec.com>
Source record: 244722

I downloaded this from http://www.lowe.co.uk/

Anyone know how to perform this mod??

Ken

AR8000DX

If you want to use a wideband scanner on short-wave, you normally run into problems with overloading and
signals bleeding into each other. Not any more! The AR8000DX enables you to switch in a narrow filter when in
AM mode, improving selectivity quite a lot. We've never been fond of selling scanners for short-wave listening
for this reason but now we can say we can make a difference.

Other scanners have been modded with narrow filters fitted in place of the normal filter. This our mod allows you
to toggle between narrow and normal settings. This will allow you to use normal mode when listening to VHF /
UHF airband signals and to select narrow AM mode when using on medium wave and short wave as needed.

The AR8000DX is an enhanced AR8000, custom modified by Lowe engineers to provide improved operation on
AM mode by providing both wide and narrow AM filters, and making the unit "Opto Scout ready".

Other scanners have been offered with narrower AM filters but this is normally achieved by replacing the
existing AM filter for one of narrower specification but whilst this is fine for reception of short-wave signals,
VHF and UHF airband reception is often compromised, particularly for airband ground stations offset from their
normal frequencies.

The modification is carried out by installing a custom-built PCB into a standard AR8000. This will allow
switching between the standard AM/NFM filter (approx. 12kHz bandwidth) and the narrower SSB filter
(approx. 4kHz bandwidth)

This improves the units performance on the short-wave bands and also on the medium wave band.

We've made operation very easy. No additional switches need be installed as the filter switching is achieved

using the LOCAL key on the keypad.

The LOCAL key option is activated by holding in the LOCAL key and switching the unit On. The LOCAL key
should be held in until the sign-on message clears.

Pressing the LOCAL key once will activate the filter and pressing it again will return to normal operation.

To give an on-screen indication, we've used one of the previously undocumented functions of the LOCAL key. If
the LOCAL key is held in and the tuning knob on the top of the set is rotated, an indicator will appear on the
display to the left-hand side of the S-meter section. Rotating the tuning knob will show numbers from 0 to 9 and
letters from a to f. We've selected the "f" to appear, as in our illustrations, to show when the narrow filter is
active.

When the filter is switched on you will notice that the volume level is reduced and that you may need to
re-adjust the squelch control. The S-meter reading will also show an apparent reduction in signal strength. This
is not a fault!! The SSB filter actually has slightly less gain than the AM filter so will attenuate signals to some
degree. This is in actual fact an advantage as you often have to use the attenuator on short wave in any case.
This may even allow listening to some stations where previously you had to use the attenuator in order to hear
anything! You will also find that using the filter often gets rid of annoying heterodynes that completely block out
other signals.

We've never been happy to recommend scanners for anything other than occasional listening to short-wave
broadcast stations, and even then, we've down-played their value. However, this modification has changed our
thinking quite a bit! We're pretty sure that you'll be impressed too.

As part of the package, we are also fitting the modification to allow use of the Optoelectronics Scout.

We're also including TEXSCAN 8000, a Windows based software control package specifically written for the
AR8000. You'll still need to buy the CU8232 interface in order to get this to work however.

Datasheets are available for both the SCOUT and the CU8232 (our WWW pages for these items are still under
construction!)

You can buy a ready modified AR8000 using our order code AR8000DX

If you already have your own AR8000, we can retro-fit our modification quite easily for you.

I got the 'PD' , built the H/ware, and it seems to work fine, however a static-
free signal is quite important in getting garble-free messages, as you would
expect. But it does time-out after 5 min's, and the shareware version does not
log to disk. So what we all need is something better, mayby PGP'd and posted
to alt.binaries.misc with conventional encryption using 'pager' as the passphrase.
That would be nice.

TD.

You can get all sorts of goodies at Durham Radio Sales and Service. They
have a Web site you can check out at: <http://durhamnet.com/durham/>.

I got my Pro-2006 from them and it came as promised: brand new, in the
box, ready to listen to anything and with a one year warranty. I'm a
satisfied customer.

I don't think they have any more 2006's (but you can check) but they do
have Pro-43's of the variety that you want.

Happy scans,
John

Quite correct.
However, the above statement says "...transmitting to jam a
legal signal...", which means that the reason for the transmission is to
jam another transmission. This is illegal.

>>Most of the devices I've seen advertised are passive, and can't jam a
>>signal at all.

Problem is, no one has been able to show that a passive device such as
being discussed here will accomplish the mission desired.

How is that possible? Has Virginia decided to leave the United States?
Jamming a legal transmission is illegal. Even if that transmission is used
to track your speed (i.e. radar).
That sheriff may have a problem with his legal knowledge.

I have a great solution here... I picked up a 12v battery it is about 6" wide
by 2" deep and about 4"tall.. It is manufactured by CSB Battery company.

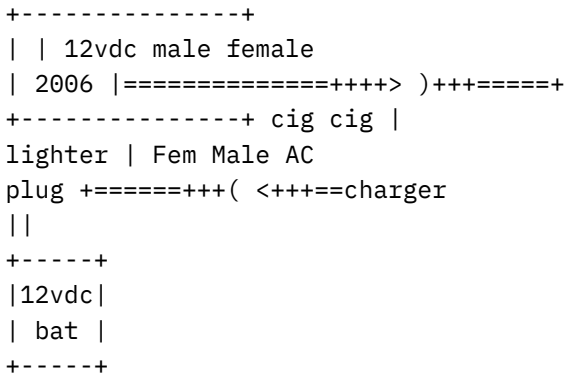
This is a completely sealed lead acid type battery, and after talking with
he folks they tell me it has a shelf life of about 4 years. I also picked up
a 750ma battery charger (dual voltage not necessary) it looks like one of
those little transormers for a calculator with a little red light...

I put a MALE cig lighter connector on the end of the charger, and got a Y
connector cig lighter adapter. I clipped off the male piece
(that is what I used on the end of the charger), and put a pair of slip on
lugs on the exposed wires.. I connect the lugs to the battery, plug the
charger into one of the open Y connectors, and plut the radio into the other.

The radio draws from the 12 volt source all the time, and I never worry about
power failure.. When the unit is off, it will charge at full level of
charger, and if I read correctly, the unit only draws about 500ma so even
when turned on, it still slowly charges the battery...

BTW: When I thake the radio out into the woods, the battery has kept it
powered for two days and two nights, then I had to come home. The real beauty
is I can pop it into the cig lighter if the battery ever were to go dead....

I bought everything from ALTEX Electronics in Dallas, Tx. They will do mail order, the whole setup cost me about $35 for everything...



CSB 1270 battery 17.95
EMCO Charger Model 612 12.95
1-male 2-female Cig Y cable ?.??
I had the little lugs, they can probably throw a couple in for less than $1.00

Good luck!

Look at a map, and pick the closest Canadian city... They ALL have Radio
Shacks!

If you are looking for a deal on 2006's which I was able to get one for
$270(US) new, good luck. I had to go to Radio Shack Canada National HQ in
Ontario, and they told me that nationwide they had about 300 units left.
That was in September... It was a week after the sale, but the guy got me one
anyway... I had planned on paying my mom back (she lives in Canada and
picked it up and mailed it to me), but she called and said Merry Christmas!
Aren't moms great!

If you can find one, sale or not, GET IT! GET IT! GET IT!!!

>
>I travel the stretch of Hwy 15 from Riverside, Ca to San Diego, Ca. and
>need the frequencies that the CHP uses for communications between the
>units on the ground and the CHP airplane.
>

I have always recieved the CHP aircraft and mobile units on "BLUE" 42.34
This was on trips on Hwy 101 from San Jose Ca. to Los Angeles. Both
sides of the conversation were on this freq. There is a Mobile freq for
the "BLUE" 42.18 but I have NEVER heard it used in over 20 years of
scanning. All pursuits go to the "Blue" when they are going thru
mutliple CHP areas. I have started seeing listings for "IVORY" 45.020 as
a air/ground frequency...but have not heard anything yet.

Don't let people tell you they use aircraft band for speed traps! CHP
cruisers are not equipped with aircraft band radios,scanners maybe.

I have found that you hear the aircraft long before you see the
cruisers...and the aircraft don't fly in fog or at night(observed).

I'm sure with night vision flir equipment I could be wrong about the
night ops.

: Mr.News

The CHP doesn't do any speed enforcement at night. They only do airborne speed enforceent with fixed wing aircraft. As far as I know, only CHP H-40 in Fresno and H-45 in Redding are the two only helicopters with IR capability, but I could be wrong.

How they do spped enforcement, at least on Highway 99 in the Central Valley, is along certain strecthes of raod, there are large white lines painted on the shoulder of the highway. The airplane then uses these lines, which are a fixed distance apart to time the speeding vehicle, then alerts a ground unit below. Now they could be dong a "speed trap" type of enforcement, where they are spcifically targeting speeding drivers, or unsafe trucks maybe. Or they could just be on routine patrol. In the latter case, you will more than likely hear the airplane on that station's particluar channel, as opposed to Blue.

The airplanes themselves usually have a normal a/c radio, a CHP radio, and a CB. Many times they get valuable info straight from truckers. And yes their call sign is Air Bear. They are also paramedic equipped and often actually land on a freeway where there has been an accident and

help is a distance off.

: 800mhz range..

: Anybody have the 'REAL SCOOP' on the Plano Tx. police freqs?

: You can email if you like... (mcadams@connect.net)

Plano uses a Motorola 20-channel trunked system. The low freqs
(822-823 MHz) are the inputs (mobile). The higher freqs (866-867) are
the repeater outputs. You can hear all there is to hear by monitoring
the ten repeater outputs. They change the control channel on a daily
basis so you will have to be prepared to lock that one out an unlock
the previous one.

hi Christopher,

for educational purposes only: the oki 900, 910, 1150 series can be
used with a hardware/software combo that will do what your asking. the
cable was sold by c-tech, better hurry and get your cable though.
another company has popped up selling what looks to be the same
hardwave cable interface, check out page 143 of the december issue
of nuts and volts. ps. yes, there are at&t equivalent phones.

KGO-TV in San Francisco has a great piece on the exploding whale story. Reporter Wayne Friedman has the film of the explosion and a great soundbite from a photographer that had just purchased a new Caddilac...the car was crushed....the dealer told the owner when he purchased it..."It's a whale of a deal".

It's the funniest story I have ever seen...all of it true.

Another note: The Coast Guard blew up a whale in 1985 near Encinitas Ca. same result...whale bits everywhere!!!

> i have a question for those of you with 3000's...lets say i have all 20 banks on, and every bank has at least one active freq in it, and priority is on. does anybody elses scanner go insane as in weird numbers and letters and things start to appear where the channel number noramlly is. and the scanner essentially stops scanning. maybe it is just mine, but those of you out there that have experienced anything like like this--
-Please!? contact me via this list or alive@hooked.net.

My BC3000XLT does something similar, but not in the scenario you described. Mine acts weird sometimes when I am in search mode. Unable to exactly recreate it (it has to do with some combination of banks turned on while searching), so I cannot send it to Uniden for repair before my year warranty is up in Jan.

If you purchased the same type of radio used by the agency you are trying to monitor, it would only work if you programmed the freqs, talk groups etc....

If you just purchased a 800 MHZ conventional radio, since the agency uses trunking, it would not work.

By the way, from the reports I read concerning the conviction of a person in Tulsa, the courts there have ruled that assisting people to do such is a violation of the Communications Act of 1934.

Defintely go with SCANNER MASTER. Police Call is not as thorough as ScannerMaster. S.M. lists all the frequencies used by a jurisdiction which is set up more clearly. In addition, PL Tones are given in Scanner Master and not in Police Call. I just find S.M. to be more detailed with information including which frequencies are for FUTURE USE. If you or anyone is interested in Washington DC Area Frequencies, I can offer another book as well.

3772. Shuttle Direct freqs?

Newsgroup: rec.radio.scanner
Date: 1995-12-16 00:00:00 UTC
From: n0nas@hamlink.mn.org
Message-ID: <819119271.AA04608@hamlink.mn.org>
Source record: 244661

JS>Any info re: freqs used by the Space Shuttle for direct monitoring?

The last I heard, the Shuttle and ground stations both use microwave to communicate through the TDRS satellites. It might be possible to build your own equipment to hear the TDRS satellites directly but I don't have that info. Chances are it is a digital data transmission. It is my understanding that the other two frequencies commonly posted for the Shuttle are backup and emergancy frequencies that are seldom used in flight but might be heard during landing. The only way you'll hear anything on those frequencies is if you live within maybe a hundred miles of the landing site.

The easiest way to hear the Shuttle is to watch NASA Select-TV on the C-band TVRO satellites. Many areas have local hams who retransmit the Shuttle audio from the satellite on local 146 MHz or 444 MHz frequencies. I believe somewhere at JPL they have a listing of those cities where someone retransmits the Shuttle. If you're a ham or know someone who is, maybe you can find out on a local repeater.

I think this information is correct but if I'm wrong maybe someone will correct me. Bye for now.

Santa Cruz County calls theirs "Project ROPE"

It works on the same principal as San Mateo and Marin Countys.
Yup, there are only a few ways out of this county also...I would say it
works about 30% of the time. The key to this is getting a good BOL out
as soon as possible,and then having units available to set up at the
various locations.

Other folks said..."My new FLEX beeper sucks".....

I say "Some things are better left left untouched"!

I have used the same Motorola BRP-2000 for almost 10 years now. It's on 152mhz and my paging company(Page Call)has it's transmitter on Crystal Peak outside of San Jose Ca. My BPR-2000 stores 4 phone numbers(WOW!)

Co-workers have used Motorola Bravos on 900mhz with poor results. My old 152mhz beeper works in basements,deep valleys and has a range of over 100 miles from the transmitting site...I even dropped it in the toilet once(and fished it out...then washed my hands...and the beeper) Another nice thing is I can use the "drop in" charger from my BPR-2000 Voice pager with the digital one.

I really think that most beepers now are "disposable" because of the type of construction...that's why my wife carries(and looses) Bravos.

Don't try to preach to me the virtues of 900mhz when it comes to statewide coverage in California. I get GREAT coverage on the 152mhz unit throughout the state with just a phone call...and I don't pay for the extended coverage since I really only use it every few months.

The day they take my 152mhz beeper is the day I look for another pager service!

Thats my $8.64 worth.

This is outrageously overpriced for a used scanner; I just bought theUK version NEW from Javiation for 250 pounds(UK = around $380).

A reasonable price is probably somewhere in the $300(US) range.

I also have a Pro 51 with the 12A3 code on it and the codes work on it.
By using the codes you get the correct band spacing for what you are
listening to.

>RCMA TX-357

I assume you must buy new batteries after the 30-40 hours? My BC200XLT, with a disabled low-batt mod, lasts 11-13 hours before needing a charge. I have 2 battery packs, so one is in use while the other is charging. The batt packs have lasted over 3 years, with the 2nd one costing about $35.

What is the advantage of the batt pack you mention? Is it that the batts do not lose their charge if the unit sits awhile unused?

Gary

3789. Opto Scout Questions / AR8000

Newsgroup: rec.radio.scanner
Date: 1995-12-16 00:00:00 UTC
From: kupiec@jvnc.net
Message-ID: <DJnz9B.4ur@tigger.jvnc.net>
Source record: 244678
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm considering getting a Scout & SAC 8000 cable to use with my AR8000.

I've never owned or used (more than playing with a display model) a frequency counter. I'm wondering how useful it would be with a regular whip, duck, or the 1.5" antenna Grove sells?

Would I only be able to use this at close range? What about in general? If I attach it to my base antenna, would I be able to pick out anything useful, or would the counter be overloaded?

Can the Scout look at only a certain "range" of frequencies?

3799. Re: Shuttle Direct freqs?

Newsgroup: rec.radio.scanner
Date: 1995-12-17 00:00:00 UTC
From: js@ibbs.av.org
Message-ID: <DJqs1L.FzB@ibbs.av.org>
Source record: 244488

Doug Reed (n0nas@hamlink.mn.org) wrote:
: JS>Any info re: freqs used by the Space Shuttle for direct monitoring?

: The last I heard, the Shuttle and ground stations both use microwave to
: communicate through the TDRS satellites. It might be possible to build
: your own equipment to hear the TDRS satellites directly but I don't have
: that info. Chances are it is a digital data transmission. It is my
: understanding that the other two frequencies commonly posted for the
: Shuttle are backup and emergancy frequencies that are seldom used in
: flight but might be heard during landing. The only way you'll hear
: anything on those frequencies is if you live within maybe a hundred
: miles of the landing site.

: The easiest way to hear the Shuttle is to watch NASA Select-TV on the
: C-band TVRO satellites. Many areas have local hams who retransmit the
: Shuttle audio from the satellite on local 146 MHz or 444 MHz
: frequencies. I believe somewhere at JPL they have a listing of those
: cities where someone retransmits the Shuttle. If you're a ham or know
: someone who is, maybe you can find out on a local repeater.

: I think this information is correct but if I'm wrong maybe someone will
: correct me. Bye for now.

I have a listing of all space shuttle frequencies used. If you would like
them I will mail them to you.

I would disagree with being able to hear the shuttle within a hundred miles
of the landing site. It would be more like a 100 feet. The microwaves will
be absorbed before they get off of base. :-)

As far as monitoring the shuttle, it depends a lot on what you want to hear.
When you monitor the ham bands you need to understand that hams like to talk
and transmit with complete disregaurd for others. It never fails, that right
when something good is going to happen, someone wants to talk. I would not
even consider monitoring the ham bands if you are serious about what you
want to hear. I would go right for the satellite. If you are near
Edwards AFB, or KSC, you can hear NASA Select TV being retransmitted on
169.400 MHz. I can hear Edwards all the way out to Palmdale. Small hills
block Edwards from the west to east to north. I can hear them in most places
on the base.

Call the Frequency Fan Club, located in Georgia. Their toll free number is 1-800-RACE FAN.

They have one that sells for about $33.00. It takes 6 AA batteries, and fits the BC 200 XLT scanner. I am about to order one myself. It sue would come in handy if your area is without power for a long period of time and there is no way to recharge the nicad battery that comes with the 200.

73,

Ron

3807. HLP: Mod for RS Discone Antenna

Newsgroup: rec.radio.scanner
Date: 1995-12-17 00:00:00 UTC
From: woody1@teleport.com
Message-ID: <4b0go4$9tk@maureen.teleport.com>
Source record: 244496

Just bought a discone antenna.
On more expensive brands of discones there is a single vertical element
that stems directly from the PL-259 base straight up.

This is the only element that the RS brand doesn't have.

Does anyone have the exact measurement of that element????

I would like to "experiment" on this discone before I put it up. I'm sure
there is a band that tends to like that particular element. I would like to
get it put in if it improves the performace but I'm not sure of the length.

Thanks.

Over here in Holland it's much simpler, it is illegal to do anything
to your vehicle that will make it undetectable to radar, or that will
make the licenceplate unreadable.

If they pull you over and find out you've got a device, passive or
active, you can make friends with mister Ticket.

When the C.A.M.P. helicopters AREN'T up and about there are another group called COMET. They are listed in several Calif. goverment directories. You'll find the listing in the Mendicino County. Could you look it up for me and send it my way. I'm pretty sure its 154.???mhz, I'd appreciate any CAMP frequencies too.

Happy Scanning

Here in Indiana they have the new version also. The price is a bit more ($12.99), but they did merge "Beyond Police Call" with it.

Not bad, but I sure wish it had actual freqs in use, not just licensed. In my area, many of the listings are incorrect as far as usage.

3827. Re: Wanted: Info about Motorola model 500 HT

Newsgroup: rec.radio.scanner
Date: 1995-12-17 00:00:00 UTC
From: Brian Kitaoka <bk104@hgea.org>
Message-ID: <4b0kff$9qt@hgea01.hgea.org>
Source record: 244563
Cross-posted to: rec.radio.scanner,alt.radio.scanner

If the frequency tag is still intact, remove the battery from the battery compartment. The freq(s) with PL should be located on a white label on the upper housing side.

If you have the exact model number H33 or H23 etc, can tell you the exact information (Band, PL or DPL etc).

Spec wise, the MT500 was a good radio. Costly to recrystal since radio used channel elements.

Timing of vehicles between two fixed objects is not legal in California
for enforcing speed laws. It is considered a "speed trap". Speed traps
are defined and prohibited in the CA vehicle code.

I was told (have to go by what I was told, since I have never been up in
a CHP plane) that the airplane is timed between the fixed distance marks
and the "target" car is paced by the plane.

3839. Re: SCA subcarrier band?

Newsgroup: rec.radio.scanner
Date: 1995-12-17 00:00:00 UTC
From: kramersj@aol.com
Message-ID: <4b22sf$lhq@newsbf02.news.aol.com>
Source record: 244575

I have Used An R-70 in the FMn Mode to to tune one or two subcarriers on some of my local FM Broadcast Stations.

Using the Antenna Coax from the R-70 you just pick around in some cheap old
table radio using a small coupling capacitor (to avoid grabbing DC!) untill you find the DETECTOR output. Leave the Radio tuned around 60KHz or 90 Khz I forget
what the (2) Freqs are.

I got a program called Radio Reading service for the blind where volunteers would read from the local Cincinnati Paper. There was some shopping center background music that was of poor audio quality (and MONO) but now that MUZAK has become a Satellite service (HAVE you seen the BP gas stations?)
the music is going away in favor of some digital stuff. I called one station and they
said the BUZZING sound was digital stock quotes. Have you seen the scrolling Displays used ion some bars and restaurants? Sports Scores etc. I Think this is
all SCA stuff. ALSO I know that one SPORTS SCORES diplay at the local SUBWAY restaurant was rented from a local UHF TV station. WXIX TV19 I think.

NOW I would like to know.....are there any SCA carriers allowed on TV?

Let me know what you find out.

Steve

How does it aim the laser accurately enough to hit a distant target??

Try replacing C98 which is a capacitor...I had the same problem that you are experiencing with all four of my BC-300's. You can pick the part of at any Radio Shack store. You need a 22uf, 30 volt capacitor and the problem should go away. The orginal capacitor burns up because it can't handle the 12volts coming from the scanners power supply. I have some other frequency expansion tips for the BC-300 if your interested. Its all done from the radios keyboard too. Let me know.

You can only restore what was there to begin with. There's no front
end circuitry in the 2005 for the 520-760 MHz range.

I don't know. I suppose it has a strobe, LED's, or something to start the
jam while the laser is steered toward the threat. Buy me one and I'll
tell you;-)

I think Grove Enterprises offers a service to restore full
800 MHz freq coverage for the Icom R7100 and R100 for about $40
but I don't know the technical details:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

My R7100 was manufactured before the deletion of 800-900 MHz.

Just look at the features, if it says it's got digital trasmission or
freq hopping or spread spectrum, it won't be picked up by a scanner
(well, if it's digital it may, but it'll sound like a buzzsaw).

Best bet, go for an Escort or Tropez 900MHz model.

Hi Michael,

I have a 2035, and it's a very good receiver. It does not, however, receive cellular, except that it does have a portion of the cellular band imaged around 1105 MHz. It is also not readily modifiable for cellular. The 2006, which I have not used, seems to be (or have been) a very popular radio, and I believe it is modifiable.

It is nice, by the way, to have 1000 channels on the 2035, but I wish they had distributed them into 50 banks of 20, instead of 10 banks of 100. I spend a lot of time locking out frequencies! Hopefully, I will recieve the computer control board for the 2035 from Santa! This will make programming much faster.

Good luck!

I bought mine this last weekend at a local 'rat 'shack...$12.95 it now
includes Beyond Police Call for your area. I also bought the Southern
Calif. Detail edition when I was in L.A. a few weeks ago, Gene was at a
Ham store in Downey autographing them...He ships Police Call to the
Distributors in early December.
I know of many Radio Shacks here in Michigan that have them..

Try 461.1625 and 461.1675 simplex.

That's what Sears Pasadena (north east of Los Angeles used 4 years
ago - but trust me, it's dull listening. All I ever heard in a month
of listening was the base telling one or two plainclothes snoops
to call him (on the phone).
After 4-5 weeks I used that slot in my scanner for something else.

==========

Actually, they are talking about 'extenders", a radio link from the patrol
car to the officer, designed to allow the officer to use his handheld
radio with the power of the car's radio.
Not all departments use them, and they are not always on when the officer
is *in* the car.
As a method to finding out where the bears are while on the road, this is
a poor alternative to a CB radio. The truckers will let you know where the
bears are, extender or no.

That's a rather strong indictment on hams. Most are quite good at not
inteferering with other communications. In most areas, NASA select being
up on a repeater does not keep the users from accessing it. Do I have
disregard for anyone in the general public that might be listening in?
Maybe a little - NASA isn't transmitted on the ham bands for their
benefit anyway.

>:

Simple frequency inversion is very similar to single sideband. Voice is fed to a mixer, and a tone is injected. The voice's high frequency energy is "mirrored" (or "inverted) into the low frequencies and vice-versa. This makes the voice sound like Donald Duck.

At the receiving end, the same thing is done using the same injection frequency. When tuned properly, it sounds very similar to the original voice. If the injection frequency is off, the voice sounds like someone who has swallowed helium (if it is too high) or a frog (if it is too low). This is all over-simplified, but it igives you a simple illustration of what is happening.

There are kits (Ramsey Electronics) and integrated circuits (MX Com) made for doing this very thing, so you could make your own.

Steve

Hmmmm... according to the schematic, this ought to work just fine. If they changed the circuitry without updating the schematic, then some detective work is in order.

Joe's right. I was able to get a deal on a used one (Thanks Sergej!) for $250US
including shipping. Look folks..they're *never* gonna make this good a scanner
for this much money again...count on it! The 2006 is the best ever, and with the
2nd or 3rd IF mod, you can use a standard communications receiver to listen to the
SSB/CW signals from 25MHz-1.3GHz...or you can do what I'm doing, which is to pipe
in the 800-1.15GHz signals from your Cband home satellite LNB...and listen to some
really amazing hidden signals!
*cheap
Cband LNB-->---->->satellite receiver-->70MHz loop-->scanner-->3nd IF @455KHz->
\ \ | |
\ \->(splitter<| |
\ |
\->||->variometer->Pro2006->2nd I.F. @10.7------------ |
cap | /
Coax SW
|
Communications Rec<----------o
(SSB/AM/FM/CW/FSK)

(* where it says "cheap scanner" you could substitute a TV band analog tuner radio)

Note that the PRO2006 can scan the 800-1.1GHz region directly, set the communications receiver to 10.7MHz and flip to (for instance) USB...set the satellite receiver to G5 Transponder 7...tune around a little...the coupler cap can be a .01mF disc..the variometer can be a 2-10k Ohm pot...experiment a little. You should be able to hear not only the usual SCPC radio stuff but a lot of other "interesting" things! RTFM! ..and try a copy of Satellite Monitoring magazine for other hints and kinks!

Help! I'm totally new to this group and scanners in general. My wife hs hinted that she would like a police scanner to listen to police and ambulance broadcasts. Her mom used to work on an ambulance and has one and so it's a "comfort sound" for her.

Other than going to Radio Shack, can anyone offer me or direct me to any advice on an appropriate scanner?

Thanks for any help you could provide. I don't keep up with this group so e-mail would be much appreciated!!
Mike.

I have a DSP modem that decodes ACARS. It is somewhat interesting. If you log the stuff to disk you can go back and look at everything for tha last xx hours. Most of the stuff is telemetry, engine and oil temperatures etc. There are different types of messages, most of them about four lines long. Occasionally there is a text message like "need translator, pilot speeks only Czeck" (this one is real).

good luck

Bruce.

A couple of years ago when I was stopped by a St.Lucie county Fla. deputy
I was told that the scanners in my truck were unlawful unless I possessed
a valid amateur radio license. I showed him my FCC General Class
Radio Telephone license and it seemed to satisfy him.

Also he indicated that handhelds were not forbidden, only permanently mounted
units.

Your mileage may vary!

I think that this band was also skipped supposedly due to the fact that many (most) of the significant birdies generated by the internal clocks and conversions in this model wind up in this band, so it was convenient to exclude this band from coverage.

>Could someone post and email any text that explains what
>frequency inversion is and why it works. Apparently this method

It is just swapping the high and low frequencies in your voice. It results in a "Donald Duck" sound. Ask a friend with a radio capable of receiving single sideband to tune in a signal with the wrong sideband setting--that is what inverted speech sounds like.

With some practice some folks can learn to understand inverted speech. To counter this, some manufacturers of phone privacy devices have done a bit more complicated scrambling scheme they split the frequency spectrum into a number of ranges and interchange them. Others invert the frequency spectrum of some ranges.

An even more complex scheme is to do the range scrambling in frequency and then swap segments in time over a short (say 120 ms) region. All of this to obscure your voice without taking up more bandwidth than it did orignally.

Of course at the other end the voice signal has to be reconstituted by doing the inverse of what scrambled the speech originally.

Hello:

I'm thinking about buying an AOR 8000 handheld, and want to use my computer to control it. I have seen three different interfaces sold: one by EDCO, one by Opto, and the other by AOR.

I would like to hear from people who have one or the other of these interfaces and what they like or dont like about their particular one.

I know they'd all do the job, but I would like to find out from those who have used them which one they think is better.

Also interested in which software you are using and if you like it.

Thanks in advance for your input- I'm looking forward to having fun with a great handheld scanner and want to make the best decision for the interface.

replies or email to: jsk@alpha1.csd.uwm.edu

In my experience, the Scout only picks up VERY close transmitters. Say, 300 ft. or less. With base antenna, maybe 1/2 mile. It's very handy if you have an interesting radio transmitter nearby, say a MedEvac helicopter, but useless for much of the stuff that the AR8000 picks up easily, like the general aviation freqs at the airport 2 miles away.

This is for all you scanner experts:

I know you can perform a mod on the PRO-2006 for full 800Mhz operation but what about the newer PROs like 2036, 2037, and 2040. Can mods be made on any of them for full 800 Mhz scanning?

I'm told you can't do any mods on the new Bearcats because it's just not possible. Is this true?

Please remember most Radio Shack employees have no idea what electronics
are let alone what Police Call is. Most stores here in Michigan have told
me in past years they expect them in April when the supplier gets them.
Of course thats a lie, since Gene tells me he ships them in Dec. and
other Michigan Radio Shack stores have them. If Radio Shack can't get
them go to a local Ham Shop, they usually know which end is up..

I have a 2 year old AOR AR-1000XLT handheldthat I woild like to trade.
I am looking for a PRO-2006, prefer with only cell and/or diode speed mod.
The AOR comes with 2 vynil cases, wall PS/charger, AOR original antenna
and
RS telecoping antenna, quick ref card and manual. This scanner has 1000
channels, in 10 banks, with 10 search ranges, search freq lockout, user
programmable search steps, uses 4 standard reachargeable or alkaline
AA baterries. The radio is in like new condition.
If anyone is interested drop me a line here. Thanks...

3903. Uses for CCITT R1 tone signals?

I don't know the 'official' cut-off date code, but I just bought two Pro-2026 scanners brand new at a local Radio Shack with an 11A3 date code and they can be restored.

The apparently knowledgeable salesman at the store claimed that because the Radio Shack Catalog Number ended with an "A", that they had been modified so as not to be restorable. He also claimed (for further proof) that the "green dot" on the box end-flap guaranteed that these had been modified at the factory to comply with the 4/94 ECPA addendum.

...just a clip of L201 and he was proved to be either grossly misinformed, or he was making it up as he went along.

The date code was also applied to the outside of the box, so I could tell the date code without opening the package. You can still find some of these things floating around if you try. It is against the law to import or manufacture these things. I don't think it is against the law to sell something you had already imported or manufactured before 4/94.

Orange? The 1996 Police Call Plus is blue both from Grove and
at my local Radio Shack (which just got them, first week of December).

Not aware of an orange 1996 book, unless it is perhaps 1996 Police Call
without the "Plus" part. Several years ago there was an orange edition.

I got this scanner from a friend and have no use of it. It only goes up to
200 Mhz(?). I know nothing about it. The battery also needs to be recharged.
If you are interested, I can find you the model #, etc. Please reply via
hwong@acs.bu.edu
Thanks.

DB> a list. thanks

Hi Barry, What frequencies are you interested in NH... You can send away for the freq. area that you want. e.g: Hillsborough, Rockingham, Merrimac etc... Each list is $3.00 apiece...You have to state (What County and STATE that you want....) Info needed is as follows...

NAME:
ADDRESS:
CITY:
STATE & ZIP:
TELEPHONE:

```
_____________________________________________
|IMPORTANT - PLEASE LIST COUNTY & STATE OF THE |
|FREQUENCY LIST(s) YOU WANT TO ORDER. |
|County:_____________________State___________|
|County:_____________________State___________|

|County:_____________________State___________|
|County:_____________________State___________|
|--------------------------------------------|
```

Qty. Model Price Total

---- LFL-Local Frequency List $3.00 ________
Total-Amount Enclosed $ ________

You must include a self-addressed, stamped business size envelope along with check or money order (no cash) and County/State of list...to...

Mr. Scanner
PO Box 291918
Kettering, Ohio 45429

The list will include, Police, Fire, Public Safety Services, Mobile Telephones, Aircraft, Ameteur Radio, Railroads, Local Government, Forestry, Marine, Ambulance and Rescue Squads....

PS: It's well worth the price.... You'll be getting a list of hundreds of frequencies...

But for the time being, let me know what freqs. your interested in....Later

... I haven't lost my mind; it's backed up on tape somewhere!

Now if you really want a laser jammer all you have to do is cover your car with mirrors. Of course on a sunny day you might find a few people offering you quaint hand gestures...
Cheese Louise, folks, what is it with these people who want to jam everything up to and including their neighbors toaster oven? GET A GRIP! If you gotta go that fast, get yourself to a race track where you can do it and have fun, and not have any other bozos get in your way (and mine!). Are these guys any relation to the turkey who I saw weaving in and out of traffic at better than 70 MPH, on a busy highway, while (I was there, I saw it, it IS true) he had a book propped in the steering wheel and was turning the page! Who says people have too much time on their hands! Better that you get on the road a few minutes earlier, listen to the scanner, and laugh at the turkies getting written up.
Stick to a scanner and a CB along with your favorite detector. If that ain't good enough for the speed you drive, you' better have a lot of luck and a big wallet, because you will need both soon enough.

"You can sit here in the waiting room or wait here in the sitting room."

The MVT 8000 is a brilliantly designed angled front panel, 200 channel ac/dc scanner. It has a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired. I use mine as a desktop unit in my office. Due to its small footprint, it occupies very little space on my desk.
It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz. It's got a 10 band search function, pass memory function, and other goodies found in high-end scanners.

Although seemingly assigned on the front panel by preset factory settings, searches are categorized to conform to channel numbering as follows:
Channel No. Band

1 FM
2 Air V
3 Air U
4 Ham V
5 Fire
6 Marine
7 Police U
8 Ham U
9 MCA
10 PRNSL (903.0375-904.9875)

Of course, you can change factory settings. It also has a battery save function.

3938. Just received my new PRO2006 from Durham

Newsgroup: rec.radio.scanner
Date: 1995-12-19 00:00:00 UTC
From: jgkempe@cannet.com
Message-ID: <4b6l04$lc4@wariat.wariat.org>
Source record: 244390

On Friday of last week, I received the 2006 scanner I ordered from Durham Radio in Ontario. As advertised, the scanner was new, in the box, with manuals etc. It has full coverage of the 800Mhz band. I am completely satisfied with the radio, and with Durham, who delivered exactly what they promised to me. I stopped by my local RS to pick up some connectors to allow taping, and showed the radio to a salesman that I know there who is also a ham operator. We both agree that the radio was new, not a refurbished unit. He sold me the connectors I needed, and got me the 2006 service manual that I ordered through him. The service manual took about 10 days to arrive. He ordered it from national parts.

Just a note to other who are considering ordering a radio from outside of the U.S.: The package containing my radio was opened by US Customs. I had to pay about $20 import duty when I picked up my radio at the post office. I assume that this amount is based on the $309 US price of the radio. There was no indication that the operation of the radio was examined. I just paid the $20 and took it home.

I have a BC200XLT handheld scanner I bought years ago. The battery pack (NiCad) last only about 5 or 6 hours. I bought a 2nd battery pack for it though. Same thing. Is this about the right time frame? Also what is the best way to discharge these completely to charge them up? Seems I heard some HAMS say that it's better to completely discharge a Nicad pack before charging as it makes the pack last longer. Also any tips on battery care would be useful. Is there a regular battery pack I can get for this scanner? If so do you have a number to call and order those? Thanks in advance.

Try Scan*Star for Windows. Even though the other programs claim high performance, Scan*Star for WIndows is the ONLY WIndows based scanning software that can reliably operate the OS456/PRO2006 at 50 channels per second. We can say this because we have tested the others on the bench and have measured scan speed with an o-scope.

Check out the demo at http://www.scanstar.com

)
)If they pull you over and find out you've got a device, passive or
)active, you can make friends with mister Ticket.

Sounds oppressive to me.

There is a lot in this message (nested quotes) which is pure nonsense.

For example "Not if you know that it is jamming another device. That is
illegal, even if you are transmitting on another frequency." Well, any
HAM knows better than this. What is required applies ONLY to the
transmitter, and the quality of the signal it radiates. A receiver which
```

gets jammed by a transmitter which puts out an acceptable, legal signal is not the responsibility of the transmitter. Period.

And "A passive device can radiate a signal. A radar corner reflector is a good example..." A reflector reflects. It does not radiate. A radiator radiates.

I wish this thread would either die, or the people contributing to it would stop spouting off opinions and quote applicable portions of the regulations; see the attachment following my comments.

First, whether you build it at home, buy a kit, or purchase a built device, section 5 of part 15 applies.

Second, such a device must not cause interference. And the operator must cease to operate the device. But the person authorized to inform the operator that his device is causing interference is an FCC agent, not a policeman.

Third, there is nothing in Part 15 which makes it illegal to own, or possess any device at all. Even operation is not illegal, only continuing to operate after being informed, or resuming operation before correcting the condition causing harmful interference.

---

47 CFR CH 1 PART 15

SS 15.23 Home-built devices.

(a) Equipment authorization is not required for devices that are not marketed, are not constructed from a kit, and are built in quantities of five or less for personal use.
(b) It is recognized that the individual builder of home-built equipment may not possess the means to perform the measurements for determining compliance with the regulations. In this case, the buiilder is expected to employ good engineering practices to meet the specified technical standard to the greatest extent practible. The provisions of SS 15.5 apply to this equipment.

[no section 24 exists, nothing is omitted here]

SS 15.25 Kits.

A TV interface device, including a cable system terminal device, which is marketed as a kit shall comply with the following requirements:

[requirements not listed as not applicable to thread, the only kits which have special stuff associated with them are TV interface devices, all other kits apparently are treated as home-built devices]

So now we turn to SS 15.5

SS 15.5 General conditions of operation.

(a) Persons operating intentional or unintentional radiators shall not be deemed to have any vested or recognizable right to continued use of any given frequency by virtue of prior registration or certification of equipment, or, for power line carrier systems, on the basis of prior notification of use pursuant to SS 90.63(g) of this chapter.
(b) Operation of an intentional, unintentional, or incidental radiator is subject to the conditions that no harmful interference is caused and that interference must be accepted that may be caused by the operation of an authorized radio station, by another intentional or unintentional radiator, by industrial, scientific and medical (ISM) equipment, or by an incidental radiator.
(c) The operator of a radio frequency device shall be required to cease operating the device upon notification by a Comission representative that the device is causing harmful interference. Operation shall not resume until the condition causing the harmful interference has been corrected.
(d) Intentional radiators that produce Class B emissions (damped wave) are prohibited.

Now for some definitions (note that I have not included all definitions, only the ones of interest).

SS 15.3 Definitions

....

(f) Carrier current system. A system, or part of a system, that transmits radio frequency energy by conduction over the electric power lines. A carrier current system can be designed such that the signals are received by conduction directly from connection to the electric power lines (unintentional radiator) or the signals are received over-the-air due to radiation of the radio frequency signals from the electric power lines (intentional radiator).

....

(m) Harmful interference. Any emission, radiation or induction that endangers the functioning of a radio navigation service or of other safety services or seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with this chapter.
(n) Incidental radiator. A device that generates radio frequency energy during the course of its operation although the device is not intentionally designed to generate or emit radio frequency energy. Examples of incidental radiators are dc motors, mechanical light switches, etc.
(o) Intentional radiator. A device that intentionally generates and

emits radio frequency energy by radiation or induction
(p) Kit. Any number of electronic parts, usually provided with a
schematic diagram or printed circuit board, which, when assembled in
accordance with instructions, results in a device subject to the
regulations in this part, even if additional parts of any type are
required to complete assembly.

....

(z) Unintentional radiator. A device that intentionally generates
radio frequency energy for use within the device, or that sends radio
frequency signals by conduction to associated equipment via connecting
wiring, but which is not intended to emit RF energy by radiation or
induction.

I am about to take a driving trip through the US and Canada. I have seen the US laws posted here, but are there any special laws concerning mobile scanners and radar detectors in Canada? Any information would be appreciated.

3949. Scanners which airlines?

Newsgroup: rec.radio.scanner
Date: 1995-12-19 00:00:00 UTC
From: Bill McCall <70003.4300@CompuServe.COM>

Source record: 244401

I've seen a few discussions about scanner use on airlines. Some of the information seems to contradict some other info. Has anyone made up a list of what airlines allow scanner use? I've taken two recent trips and my results were mixed. I just got back from a round trip on Delta and reading the rules for personal electronics devices listed in the back of their inflight magazine, it specifically mentions scanners and says they may be used during flight but not during take off and landing or while on the ground. On one flight a flight attendant did ask my what I was listening too and asked me if I knew if it was ok or not. When I told her I checked the magazine she was happy with that. On a recent flight on America West, I did the same thing and their magazine didn't mention scanners specifically, but the vaque language led me to believe that it was ok. I was challened on that flight by a flight attendant. When I showed him what I read in the magazine, he referred me to another part of the rules where it did specifically say that vhf receivers were not allowed and he told me to turn it off. Is anyone keeping a list of what airlines allow or disallow scanners? To summarize my most recent experiences:
America West - NO
Delta - Yes - inflight If anyone wants to mail me their experiences with different airlines, I'd be glad to put it in a FAQ to be posted periodically.

> These frequencies are allocated to TV channels 22 through 69.
> ... anything else allocated to these frequencies???

Well .... 608-614 MHz (Ch 37) is allocated to the universe <g>. That range
is restricted to radio astronomy in Region 2 (the Americas) and no xmitters
are allowed. Other than that and a few international fixed authorizations in
parts of Alaska and southern Florida, it's all broadcasting.
Note, however, that includes Auxilliary Broadcasting, so you'll find some
wireless mikes and similar uses on otherwise vacant channels.

Allo, I got this scanner from my friend and I have no idea what the heck it it! It is an Icom unit, has an LCD on the top that shows the channels when it scans. It has a number pad on the frond, a removable batter pack on the bottom of the unit. It has a mic attatched to it(I think you can talk through this mic). It's got a Volume and Squelch nobs on the top of the unit. What is this? Is it a two-way radio/scanner, CB scanner or what? Does anyone know anything about this thing? How much can I get for it if I sell it(most likely I will 'cuz I don't use it at all). Thanks for you help.

3956. Mappings of Uniden Bearcat and RS PRO models?

Newsgroup: rec.radio.scanner
Date: 1995-12-19 00:00:00 UTC
From: calanan@fstrf.org
Message-ID: <9105@niktow.canisius.edu>
Source record: 244408

I've poked around on some great web pages/ftp archives,
like "KC5KTO's Radio Shack Scanner Modification Page" at
http://rever.nmsu.edu/~weasel/scanner/mods.html,
but haven't been able to find the answer to the following questions:

Does anyone have a listing of mappings of the Uniden / Radio Shack
models, preferably the handhelds? I know some of the RS PRO-XX
handhelds are made by Uniden, and I'd like to find the "sister"
unit to the PRO-51, and the others for that matter.

Also, does anyone have a ranking of the RS PRO-XX/Bearcat handhelds
in order of performance/features? I know KC5KTO's list is in
numerical order, AND that a listing by "performance" is very subjective,
but I'd like to find out where my PRO-51 stands, and which models
are "better" than it.

Thanks!

...or why would anyone want to know the Police frequencies unless they were wanting to get away with a crime. Or why would someone want to know about the ambulance unless they wanted to injure someone and be sure that all the emergency vehicles were out so that none could come help them? Or why would someone want to know military air frequencies unless they were planning an armed revolution and wanted to know where the air strikes would be coming from.

It's something to listen to. That's all. Yeesh.

Grove doesn't sell 26's; I believe they sell PRO-43's though for around
this price which are better in some ways (800Mhz) and worse in others (no
programmable steps and some [slight] gaps).

Is this handhelds in cars, or just having a handheld is OK. I would
imagine that having a scanner in a car, irregardless of whether it's a
handheld or not, would not be a Good Thing for Officer Happy to find on
you.

What if the officer were to stop you and find a scanner turned off and in
the glove box or something (and no amateur lisence)?

I have the lt. blue BPC, got it a year ago. It's the thick book, covers all of US. Have not seen the orange one. Must be different from 96 Police Call Plus.
The 96 Police Call Plus is dark blue, and is a combination of
Police Call and Beyond Police call, per state combination.

> Both in the SE US I have no idea about the rest of the country! Sorry
> guys
> John at RadioShack #9580

Maybe the market distribution is different in SE US.

So in total, I think for 1996 we have three books:

Light blue "Beyond Police Call"
Orange "1996 Police Call"
Dark blue "1996 Police Call Plus"

It's not cheap, but the AR8000 would be a good choice. With scanner,
interface, and software, around $800. Worth it though if you
are super serious about scanning. Maybe someone can recommend
a cheaper solution that still has computer control?

OKAY, OKAY, OKAY. Someone is obviously NOT getting the message.

Lets suppose that I have a particular radar that keeps giving me trouble. You
know, fines and such. The FCC says that I can't LEGALY and intentionally
interfere with that signal. Okay, no big deal. I aquire another piece of
equipment that performs some other function, say, checking the surface of the
road for icing or other slippery conditions, maby even other vehicles. If
that device just happens to transmit in the band of the radar, I haven't
violated the law. I just haven't had a complaint about my "Road condition
monitor."

Get the picture?

o Ordinary telephone conversations - not terribly exciting

o Government communications - also usually boring stuff, but ocassionally you
will hear about something being planned, like a diplomatic dinner, a meeting
ocassionally you will hear stuff that goes into and out of crypto mode!

o Corporate Conferences - sometime very revealing stuff from the Fortune 500
boys themselves! (tip: think investment strategies)

o digital stuff - some packet, some rtty, ARQ-E3, etc etc...some crypto, some
in the clear. Buy a Universal Radio Digital Terminal, it gets em all.

o some really bizarre stuff, codes that are mindbenders, prob DES...geomarkers
stuff the cartographers use, ocean crawlers..submarines, people at the north
and south pole stations..mobile military stuff - during the Gulf War the
sat-hackers had a field day!

..but if you're not into listening...eh..;-)

Source record: 244477

No, this isn't about getting top-secret balloon information from your scanner. I'm quite new to scanning but I had a bit of a brainstorm. Height = reception, right? Then would it be possible to go out to a field or some fairly open place (no power lines, and watch for thunderstorms of course) with one or a few helium balloons, rig up your antenna along a kite string attached to the balloon (or use a long wire _as_ the string to the balloon), send it up a few hundred feet, and use the wire as your antenna? Sure as hell is cheaper than a tower, no messy zoning regulations like a tower, and it's collapsable. Sure, this isn't a really great solution for mobile scanners, but I never said it's great for everything.

If this _is_ a workable solution to problems in hilly areas, for instance, is there anything you can do to optimize the antenna for better reception (like using solid-core wire as opposed to stranded, or using a pair and putting an 80 ohm resistor between them so you've got an 80-ohm antenna, or placing a "duck" antenna on the baloon and run the wires off that to the ground...)

I imagine that the same would go for kites, pet condors, etc.

I tried it, and it's nice but very finicky. It _must_ have a city, state,
and service code specified, and the City _must_ be capitalized
appropriately (case-sensitive). The police department code PP is correct.

I'd prefer to be able to leave one field blank (such as the service code)
and have it give me ALL listings that fall under the other two, rather
than an error. But it's still a great resource.

The newer versions of RealAudio (2.0) support live audio feeds - even if the PD doesn't allow a _direct_ connection, I imagine that someone local could just hook up a scanner to the sound input on a computer and let it run. There aren't any laws about what you can put on repeaters, and this is sort of a repeater, right? It'd be completely nonprofit and as long as there's a graphic saying "brought to you by RealAudio" or something you could probably strike a deal with them to give you a lisence for the server for free. Good publicity and all.

Where are you getting THIS from? If the color of your car is no object,
you should go for a flat, dull black; mirrors will just reflect the laser
back better. I've heard of one person covering his car with a rough
stucco-type finish and spraying it black. Looked like crap, aerodynamics
are right out, but laser can't touch it.

It doesn't need to be aimed. All you need is the frequency of the light
modulated at the appropriate frequency. All you really need to do is
swamp the detector on the gun which shouldn't be too difficult to do.
I'm confident that if you put an IR filter on a Q-beam flood lamp it would
render the gun useless.

Cheers!

The Florida Statute regarding the use of scanners in cars says that it is illegal to have one "installed" this is the loophole allowing hand-helds. The only other exceptions are to Public Safety officers, Press, and liscenced amateur radio operators - (does not specify a certain type of liscense. Hope this clears it up If your interested in the exact wording or statute number let me know. Don't have my satute book handy right now.

Happy scanning,

Sounds like you are talking about the PerCon SPECTRUM CD.
I have the Winter 95 edition, and find that the speed of a search on my
486-66 is s l o w in WIN 95. I use the DOS version instead.
Something else I've found that really makes this easier for me is to break
thefreq DB into somewhat logical chunks of frequencies, do a frequency
range search, output the results to a .DBF file, then use my regular
database program to message it from there. That way, I get the searches
I want, faster than off the CD.
Works for me.

Believe it or not, the law only applies to scanners that are "permanently
mounted" in a vehicle. Therefore, handhelds are legal.

Drew's question: what's the difference?

|:>never used. Its a good deal, but you have to MOD it, which only
|:>requires hitting a few buttons.

Not anymore. I just bought a PRO-51 (yep, it's still $199 - until xmas),
BUT the kaypad mod doesn't work on the newer models. When RS (or the FCC)
found out that people were able to just use a simple keypad mod to "reopen"
the cellular bands, they recalled all PRO-51's and defeated the keypad mod
with some sort of hardware like the PRO-46's daughterboard. The folks at
RS told me you can tell, and I believe this is true with models date coded
even before '95, buy looking at the box. If there's a little round orange
dot stuck on the box, no more cellular.

I've asked around and have heard from most people here that there is no
known mod for the PRO-51 to reopen the cellular band. :(BUT, I received a
message today from someone that confirmed what I was told by RS, and thinks
that if the same daughterboard defeat was used as the PRO-46, the simple,
well-known mod for the PRO-46 should work for the PRO-51.
(see: http://rever.nmsu.edu/~weasel/scanner/mods/pro46cell3.mod)
FYI, it's a matter of reaching the daughterboard, and snipping a wire!
Once accomplished, the keypad mod works again.

Now, this sounds promising, BUT I wouldn't want to be the first kid on the
block to try it and end up ruining my new toy (and voiding my warranty!)!

Does anyone know if the daughterboard mod will work on the PRO-51, or would
be willing to try it out? I'll admit, I'm not so great with the ol'
soldering gun!

BTW, I've been using the PRO-51 for a week now, and I would recommend
it highly. One thing I would suggest though, is dumping the rubber antenna
it comes with and picking up a good antenna. I bought an all-purpose
telescoping ant. from RS (about $20 - can't remember the model#) that picks
up different bands depending on how it's been extended. It really opened
up a lot of freq.'s for me.

Source record: 244302

I managed to lock up the search feature on this scanner. I think I either:

Put in two out of range freq. as the upper and lower range in the search mode OR

Put in a out of range freq. as the upper and the same (out of range) freq. as the lower.

In any event, I want to unlock without losing all the programing.

Thanks for your help.....

This sounds neat, but has anybody developed a robust search
service that will allow for interactive contribution of
information and searching on that information?

We have a local bbs here for scanner freaks, but it is so
overloaded with redundant, old, and just plain wrong information
that it is of little value anymore. A fancy Web page which
lets me find the fire frequencies for Fairfax County or
all users in Florida of 154.415 would be neat!

If nobody has done this, then this has to go onto the
"To Do" list.

While NiCds can benefit from an occasional deep discharge
it will limit their useful cycle life. (See the Journal of
Power Sources). In general, avoid deep discharges,
avoid overcharging, avoid charging them at low or high
temperatures (roomtemperature is best). Store them cold in a
fridge to slow their selfdischarge and other thermally driven
internal processes (separator decay, dendritic growth etc).

For the longest life charge them using a pulse type charger.

>mods for pro-25 scanner wanted to restore the 29-54Mhz range . thank you.

First, you are assuming that those frequencies are possible with your scanner. Secondly, you are assuming that they are programmed into the scanners firmware, but are simply hidden from you. Thirdly, you assume a modification of some sort is possible to bring these back.

Try searching the web...there are a ton of scanner-related web-sites. According to the info I have seen, the US model has the 29-54 band. Does yours substitute another VHF Lo band instead?

I have not seen ANY mods for this scanner. That doesn't mean that they don't exist. If no one responds, doing a web search may help you determine if anything at all is possible along those lines.

I wanted to do the same thing on my 2004 radio. I ended up cutting
the copper of the circuit board on one of the legs of the spdt switch
that normally controlled brightness. Now, I have full brightness and
full darkness. You might want to do the same. If you want to un-do
it later, simply solder a jumper across the copper run that you had
cut.

I can't be sure but as the '25 is "new generation" I would supect that the coverage is written within the CPU rather than supported by a matrix of diodes etc. I would supect the only way to get yourself the 29-54MHz coverage rather than (and not aswell as) 66-88MHz is to replace the CPU with one from Tandy National Parts in the USA, you will also loose part of the 800MHz :-(

The stock code you has is 20-9505 ?

YMMV though, I dunno.

Is the AR8000 a portable? And, if so, is it the one I heard
that sounded like the speaker was buried beneath a mile of mud?

I hope the rest of their line sounds better than the one
I heard.

As long as you're considering phones, take a look at the Vtech 960. It's a secure phone (digital scrambling). I mention it only because of a recent favorable experience I had with the company. I bought an earlier model about 5 months ago and it started having trouble (noise, mainly). I sent it off for repair to Vtech. About a week later, they sent me a new unit, one that replaces my old unit, along with an extra rechargeable battery. They stand by their product...

Radio Manager for Windows is Shareware and is only $30 to register. Also
the new version due out in Jan of Feb supports. Icom, The Opto equipped
Realistics, The Scout and the Aor-8000.
Try it at ftp.oak.oakland I belive in the pub3 dir...You'll need RM.zip
and FM.zip.

Scanstar and Scancat both are great programs but cost somewhat more.

Police Call never was published by Radio Shack. I think you'll see
Hollings Radio Data on all the books. Gene Hughes is the one who writes
Police Call, they were and still are marketed through Radio Shack as well
as most Ham stores and the like.

It's now called Police Call Plus, and contains the normal Police Call
stuff as well as what used to be in Beyond Police Call for your area.

Anybody know if the Tropez model DL or NDL 900 is a spread spectrum phone?

I am curious if it is or has equivalent digital encryption so a scanner cannot effectively pick it up.

Also, anybody have comparisons of the Tropez and other 900MHz phones?

Thanks for your time.

>to monitor the digital transmissions as long as they are not encrypted.

No; you cannot because there are millions of digital encryption codes used
to set the digital algorithm so simply programming the radio for the freqs and
setting it to digital mode wouldnt work ... you would have to have the code
key to properly program the "digital" mode. And as I understand it, this programming
is propriatary anyhow so you couldnt just walk into a radio shop, buy the radio
and have them program in the codes anyway unless you were authorized to use
the system.

I got one of those small active matrix lcd color TV's for Xmas, and it gets about two hours out of six AA batteries, which, unless I recharge, is going to be pricey.

What's the best kind of nicads and charger to buy? (I posted this elsewhere, but they told me to post it here, saying that the guys in this group could type reams about it.)

> to call and order those? Thanks in advance.

Every so often it's a good idea to leave your scanner on and run the
batteries DRY before recharging - this helps relieve "memory effect" which
is what happens to NiCad batteries which are still partially charged when
they're recharged - they won't hold as much power.

I stopped by a local battery store yesterday and bought some NiMH
(Nickel-Metal-Hydride) AA's for my scanner. They're rated at about
1200mAh rather than 650 (which is the standard NiCad rating) and last
about twice as long, possibly longer, though they require 20 hours to
charge fully. Another nice thing about NiMH is that they don't have a
memory effect and don't care whether you store them discharged, fully
charged, or somewhere in between (though if you've kept them in a drawer
for two years you might consider recharging them before you use 'em.)

A friend of mine who works at LinnTronics in Phoenix said that there's
NiMH AA's from a Chinese company that are rated at 1600mAh, which will
give you a battery life of almost three times as long as standard NiCads.
Not sure how this corresponds to Alkaline rechargeables, Alkaline regular
batteries, or Lithium Ion, though.

The NiMH AA's that I got were about $5 apiece, though my friend says that
I got ripped off at that price. :)

I dunno about packs, but most smaller electronics (as long as they're not
very specialized like cel phone packs) are basically NiCad AA's on the
inside - it's generally pretty simple to crack them open, swap in NiMH
batteries, and hot-glue it back together.

>for this application.

Why would he say 2 6-volt gel cells? You could just use one 12 volt gell cell.
this would be best. If you go to en electronics store, you can pick the biggest
12 volt gell cell you think would be ok to carry around, and you can also
buy a 12 volt gell cell charger for around $20 that charges you battery overnight.
DONT by a 12 volt plugpack, it must be a gell-cell charger, it looks just like
a normal plugpack for the wall, so shop around electronics stores and youll find
just what you need.

TD.

The early versions of that scanner had an incorrect low batt sensing
problem and would shutoff when the pack was only half used up.
This was discussed heavily in the scanner newsgroups, and the
mod was simple to disable it (I did so on mine). Bob Parnass
and others reported 9-11 hours life after the mod.

My orig nicad pack is still working on my BC200XLT, (7 or 8 years
old now?? when the 200XLT first came out).. Several times I had a
dumbass attack and left the scanner on, running the pack dead,
and it didnt seem to be damaged.

>Looking for opinions from owners of the Optoelectronics Scout.
>Thanks
>

I've had mine for a week or so and think it was worth the money. I had a RS freq counter which was basically worthless, the Scout has helped me find a few local freqs around here. It's cool to see the Scout register the cell freq of the guy next to ya' too :)

IMHO ..... Very nice piece of equipment.

4058. Re: Atlanta PD just went 800 - need freq's

Newsgroup: rec.radio.scanner
Date: 1995-12-21 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <4bbid4$q5e@hopper.acm.org>
Source record: 244237

As of Sunday 26 Nov, Atlanta police are on the new public safety trunk.
Fire is simulcasting on their old VHF frequencies, and the mobiles haven't
made the conversion yet.

The new frequencies are:
858.2375 .4375 .7625 .9375
859.2375 .4375 .7625 .9375
860.2375 .4375 .7625 .9375

Two frequencies (859.7625 & 860.2375) were locked out by the third day
of operation (apparently technical problems / interference) and 858.4375 is
reserved for phone patch unless the system saturates. Add the control channel
(alternating between 858.7625 and 859.2375) and they're left with eight usable
channels.

>Any pointers to facts? Or just plain list of things it does?

Here are the facts. I have a pro-2006 with os456 board installed. First of all, pro-2006 acts as a stock 2006 if you do not have the software running on your PC. You have your 10 banks with 40 channels each and you can still program them by pushing buttons. LCD panel still works as before also. Now, Once you execute the software, the OS456 interface board took control of the CPU in 2006 and now the LCD panel goes blank, and all your controls are done from your PC.

Hardware specs are as they claimed in advertisements. It gives you capablity of decoding CTCSS, DCS, and DTMF. Some software allows CTCSS scanning also. This way only frequency with valid CTCSS breaks the squelch. It also have a CI-V (Icom) interface also for those who uses them.

Software specs? There are a number of them out there, so you have to get demo copies and tried them out. I use ScanStar Pro-edition on DOS and like it very much. ScanStar Commercial-edition is much better with Tatical-GUI and mouse interface but can't afford that yet.

I'll let someone else fill in the informations that I missed on the OS456.

From what I've read, this is what TV Marti does in the Florida Keys to
get their antenna up 10,000 feet, in order to deliver their signal to
Cuba 90 miles away. I'll bet their balloons are a bit larger, though.

Opinions expressed herein are my own and may not represent those of 3M.

Hmmm. Too bad. I put the CD on my Christmas list. Probably too late to
do any good though. Most everyone that I might expect something from
does their shopping throughout the year and puts the stuff away. One
year we (my wife and I) kind of forgot who we had all bought stuff for
when we were at a rather unique shopping area and wound up having many
more gifts than we needed that Christmas.

>are right out, but laser can't touch it.
>
>

.....at extreme ranges. There isn't any vehicle out there, covered in
stucco-like material and painted whatever color, that can't be
velocity-checked by a Kustoms Signal ProLaser II or even a cheap LTI
Marksman at ranges less than 1500 feet. It would almost certainly affect
the efficiency of the laser at longer ranges, but under 1500 feet, you're
toast. Hmmm, haven't tried it on a F-117 yet, but F-16's are easy as long
as the cosine isn't too bad..... BTW, target color DEFINITELY has an
effect on target acquistion/range. Lasers love red, followed by yellow
and other such colors. Dirty gray is the hardest to hit, with dirty black
being difficult also. Reflectivity is the key, so vehicle shape has a
little to do with it (not too much, but some, and again only at longer
ranges).

The Radio Shaft "high capacity" nicads (gold sleeve) give you the most
bang for the buck in mass-market nicads.

Depending on the power requirements of your TV, nicads (which have
slightly lower terminal voltage than alkalines) may not give good
performance regardless of capacity.

From: Jim <jdd@cellnet.com>
Message-ID: <4bcgca$9jj@mirrors.cellnet.com>
Source record: 244253

I have the ACARS air-interface spec, and have designed (but not built) a demodulator unit for it. It basically uses an MSK modulation at 2400 baud in a normal, old AM voice circuit. A couple years ago, a new MSK demod chip came out just perfect for this application, and I drew up a design, but I never got around to building it.

I've heard of a few high-end demodulators on the hobby market that are ACARS capable, but I can't remember the name. They just give you the bits though, not interpret the meaning of the fields. Most of the body of the message is ASCII, so some manual interpretation is possible. However, a little software effort is needed to interpret all the messages and display the content more effectively.

Anyway, e-mail me direct at jdd@cellnet.com if you want to see the spec (I don't check this newsgroup often).

Cheers.
Jim

p.s. The position reports are the neatest outputs -- it would be real cool to have a system that could track aircraft positions on a map...

Mixing of a lot of transmitters can cause a image signal that the scanner
will spit out like the original signal... TV VHF broadcast is more in the
300-400 meg range and uhf is around 600-700 megs...

That isn't exactly what is going on, but close enough.

The biggest drawback I have found with this is that you can't download freq's from the PC into the scanner's memories, since it does not talk at all to the scanners microcontroller.

I have one of the Cincinnati Microwave Escort 900 MHz cordless phones (now also sold in AT&T phone stores and Radio Shack), and at least this spread spectrum phone cannot be picked up by my PRO-2004 on any frequency. In fact all I can find are three or four places where the noise floor increases a bit.

Unless things have changed recently, about a year to two years ago (when I was shopping) the Tropez phones had a reputation of poor audio response... hard to understand.

>Thanks.

Didn't I respond to you yesterday? Maybe not.

Point your web browser at:

http://www.tandy.com/rs

Tandy keeps a fairly good collection of specs and owner's manuals on-line.
They may have yours there too.

The only "real" mod I am aware of is one to increase the scan speed. Just
search the web and you can find all sorts of sites with this info (I don't
have this stuff handy or I'd give it to you).

Beware of the "cellular mod" for this scanner. Since there is no receive
front end for 800Mhz in this scanner, any "cell mod" just shows the numbers on
the display without regard to the fact that there is no supporting receiver
inside the box!

Yes, you are correct. I had my PRO-2004 with me wherever I drove in Florida. I just didn't have it "screwed" under my console (it sat in the passenger seat). Anyway, I was stopped for speeding by a Highway Patrol, quickly hit the "bank" that had all the FHP freqs programmed in, and listened to the channel that this particular officer was on. I happen to have an Arizona license which I've had since 1978 (I'm in the military and the license doesn't expire until 90 days after I retire). Anyway, back then (1978) license numbers were short (1 letter & 4 numbers - example "A1234"). Today's Arizona licenses go by social security number. So, when the officer called in my license number, it came back invalid. When he approached me about the license being invalid, I explained to him that I was in the military and the license is good until I get out. I also informed him to try using my social security number off my military ID card since I understood current licenses to use socials. He went back to his vehicle and called it in again, but failed to go by my social security number (he simply repeated my 5-character license). When he again approached me about it being invalid, I said that I heard him on the scanner and noted he did not give them my social. This time he did, and it came back valid. He asked why I had him programmed in my scanner to which I replied, "Just curiosity" and that was all that was spoken about it. In fact, he even commented that he had the same scanner at home, and it being an interesting hobby. I got off with just a warning for my speeding (which surprised me) but nothing more was said in regards to my scanner.

Yep, the Tropez IS Spread Spectrum (FH). You're probably thinking of
Spread Spectrum (DS) which spreads the signal out over a certaind
bandwidth. The new phones use Freq Hopping Spread Spectrum. It offers
better performance against interference. Most hop freqs every 300mSec or
so. Just try picking it up on a scanner, ain't gonna happen. Er..Well,
unless you can rig up a really wideband receiver. Not sure what type of
encryption they use but GSM A4 would be my guess.

No, the Interceptor LZR uses a real laser, not IR LED's. Not sure how
they steer it (or if they steer it at all), but, it uses an actual laser
(pretty sure they use the same one in all laser guns). The LED's have
had some success. The K-40 "Diffuser" has decent success rates below
~800FT, not 100% though and beyond 800 FT. your toast. If someone would
use Xenon Strobes instead of LED's I'm sure it would succeed. Of course
I'd use more than 1 strobe and strobe them independantly to increase the
percentage of error strobes. All it takes is one erroneous pulse to screw
up the hit count. Ahhh, the challenge of ECM!

The scanner has probably been sold by now but, I would like to warn anybody considering buying one that in spite of the large number of features it has a very poor receiver. I have had emails from a number of people who tell me they sold theirs soon after they bought it because of the receiver.

I'm doing the 64 block memory mod. on my Pro 2006 scanner.
That's 25,600 memory channels.
I'm all so installing the CE-232 interface.
Now here is want to know...
I'm looking for more info on how to change the blocks thru the CE-232
or the key pad.
I have heard of LINKALL which sounds real good in how it operates.
and it sounds like what I'm looking for.
I sent a SASE to them for more info but they have not answered yet.
so I need to know if any one has tried this system or knows another one
like it.
and where I can get info on it. Bill's Book Cheek 3! tells about
Linkall but not how to
build one or one like it.

Thanks.

Every one starts out Ignorant.
But that can be cured through Education.

You can also take a look at the FAA's "Advisory Circular No. 91.21-1".
This is a publication from the FAA used by aircraft operators to help
them set their policies. Remember that an AC in not regulatory in
itself. It is to assist operators in comlying with federal aviation
regulations. The airline and/or pilot in command can set a more
strict policy on the use of PEDs at their discretion.

I have the AC text available at
ftp://ftp.ccnet.com/users/cwheeler/ac91211.txt

True, I agree that could be possible, but on trunking, without knowing the talkgroup, you would hear all, Fire, Police Ambulance, Dog Catcher, etc. Not really fun.

73's

p.s. I noticed that Motorola is cracking down on people having the software to program radios. (that they are not licensed for)

In the Motorola world, their trunk radios requires both the Radio Software of the radio and the EXACT system Key to program frequencies. Without the key, the Radio Service software only lets you set MINIMAL things. This KEY is only sold to the proper people. If you are found to have a copy, watch out.....

It is a useful but silly toy. If you want the freq and you are near the transmitter, you got it. How often do you need to do that? Now that the price is dropping, you may be able to buy one used. I bought a used Model 25 scout, the one that only hold 40 freqs. I find that the number of freqs isn't an issue. The only feature I wish it had that the later models have is the sleep mode that lets you hold the freqs.

There is a rumor that the scout and interceptor will be combined into one product which is why the prices are dropping.

865.4625 (old secondary channel -- may not be used anymore)

*** note: this is a motorola trunked system. The freqs are listed in order of activity. The majority of the traffic comes in on the first two (853 & 851).
The old system (freqs: 858-865) were listed in the '94 FCC Database as belonging to Motorola Company in Bloomington. The

They seem to be using standard APCO 10 codes, with the addition of "code 10" which means everything is under control.
Callsigns are: 100's = security, 200's = housekeeping, 300's = maintenance, 400's = management (??), 1300's = parking lot attendants. There are some new ones in the 2100 & 2200 range which seem to be addtional security personel.

Other freqs:
462.175 Melvin Simon & Associates (management company of Mall)
154.625 Macy's pager
464.825/469.825 Macy's security
463.8125 Bloomingdales
464.3875 Blommingdales
463.8375/468.8375 Nordstroms
464.0875 Nordstroms
464.2625 Nordstroms
462.8125 General Cinema (movies theater at mall)

Let me know what else your find.

Does anyone have a mod that lets you display alpha numeric on all 500 channels at the same time . I understand radio can be programed with 250 of its 500 channels displaying alpha numeric.

I'm not sure what VB 4Pro is, but if it can read standard .DB files, it
should be able to.

It's nice, of course, to have the HD space to do this. I just installed a
WD 1.2 GIG drive, so I'm set for a few months. ;-)

Hi, Brian..
Welcome to scanning! There's so much to listen to that no-one can hear it all!
There are several periodicals that can be of help to you. A good newsstand may carry Popular Communications or Monitoring Times. (I like MT better) Either one will give you an ides of what's available. There are others that are subscription only, but I'd stick to the two I mentioned above at first.
Check with your local HAM group(s). Many HAMs are scanner listeners, too, and there may even be a local listener's group they know of. Check with a HAM radio shop to find these groups.
Other than that, don't rely on *us* to tell you how to do *your* hobby. Only you can do that. As your experience grows, you will find more of what's available on the air, and learn which particular services are interesting to *you*.
And that's what's important, isn't it? Who cares what *I* listen to? If I listen to my local electric company dispatch service trucks, does that mean you have to listen to your local electric company dispatch service trucks? Of course not. It only means that you *can* listen to that.
Most of us here have certain areas of interest that we listen to (for me, it's local police & fire). We got those preferrences by listening to what's available, and finding out what interests *us*. This takes time, and can't be rushed, nor can it be determined by anyone else.
So relax, have fun (that *is* why you bought that scanner, isn't it?), and let it happen.

It sounds like some Highway Traffic Act statute that only exists in his province. The frequency range is particularly interesting since most police comms are found in the 142 MHz range (except for the new trunked systems rapidly coming on line.)

Message-ID: <4bem9o$n7u@hq.hq.af.mil>
Source record: 244142

Car and Driver did a test of Laser speed guns a couple of years ago. They found the best strategy to handle a laser speed gun is to confuse it so your laser detector can give you enoough warning time to slow down.

Without any sort of jamming or confusing, the avewrage laser detector goes off at the same time the gun locks on you. Not too useful. So the challenge is to degrade the gun so your detector can find it before it finds you.

They found that the IR put out by your high beams does have an effect on the gun. But driving with your beams on is not practical. They next tried a rally lite with an IR red glass filter. Bingo! The IR put out by the lite overwhelmed the laser and sufficiently degraded its performance to allow for a quick slowdown.

Problems - Light is very directional. If you have your IR lite pointing forward and the laser is on the side, you're history. I don't think a directional laser could be used to blind a laser speed gun. The system required to steer the laser would be too complex.

I wonder how a series of small 20 watt halogen lights with IR would do.

4121. Re: Pro 2006 Mod. Memory switching. Help.

Newsgroup: rec.radio.scanner

From: ford@interaccess.com
Message-ID: <4beof3$ei@nntp.interaccess.com>
Source record: 244143

I can see how that would work for the 16 mem. block version.
it uses 4 switches to turn on and off which block you want.
but this will be with 64 blocks and required 6 switches.
the CE-232 only allows up to 4 switch output.

I can see how I can use one or two switches to move to the next block
or previous block. But that won't allow me to go from block #5 to
block #49.

Every one starts out Ignorant.
But that can be cured through Education.

I don't know if this is how they get the signal up to the balloon, but
If I were doing it I'd send the signal up to the balloon via radio,
and re-transmit the signal on a "regular" TV channel. Not unlike what
is done at some commercial TV stations with a microwave link between
the studio and the transmitter site.

As far as a "home-brew Marti" (or martini hi-hi), you could do the
same thing, and set up a cross-band repeater on the balloon. EOSS and
other amateur radio balloon groups do that when they send up their
experimental balloons, and pepole from hundreds of miles away are able
to use it to communicate.

Yes, you're right, you would't want to do it near an airport. Might
get a rather nasty QSL card from the FAA!

Where are your priorities? So, you are going to boycott police simply because they encrypt their comms. Oh, well, why don't we just boycott ALL of the advertisers on the normal satellite channels that scramble their broadcasts... Hey, how about boycotting the countries that don't speak your language... I think you are a tad bit TOO addicted to scanning to suggest a boycott of the police. There's more to life than just listening to a bunch of "Alfa Nine Two's".

I am new to scanning and I would like to know what kind of a
handheld scanner can I get for aroud $150-$200. The only place in
town where there is a good selection of scanners is Radio Shack. Could
you maybe recommend a good scanner to buy at Radio Shack?
Also I would like to know if it is good to get a scanner with 800
mhz coverage and what there is to listen to in 800 mhz.
Please Email me with any suggestions, recomendations or coments.
Thanks.

Dan,

Most likely those freqs are no longer being used. Ex: In Portland,
OR. the Police turned off the 460 bank of freqs this summer and is
now using the 800Mhz Trunking system exclusively. (FYI: There was a
big wind storm on 12/21 and the system crashed for 5 hours. Motorola
has yet to answer why it crashed. So much for the "Public Safety
Net")

Without knowing the content of the freqs you were listening to it is
hard to tell why they may be dead at this time. If you could
elaborate as to the content either myself or someone else on this NG
may be able to answer your question.

Brian:

While "800 MHz" is frequently mentioned as the scourge of public safety
radio, it saddens me when folks don't make mention of the vendor or the
presence (or absence) of trunking technology. Not all "800 MHz" radio
systems are designed, created (or maintained!) equally.

Yes, Portland's new radio system has taken a beating in the media, and
more importantly - in the eyes of the public. There are however, many
agencies in our country that have thusfar had a -very- positive
experience with the 800 MHz band. It troubles many of us to no end that
we are often labeled as being "wasteful" or "fools" , solely upon our
choice of spectrum.

Just some food for thought.

Happy Holidays!

Brian Humphrey
Public Information Officer
Los Angeles City Fire Department*

*Happy home to a 24 channel fully repeated analog conventional 800 MHz

> post.....Hmmm......

You did. But lest an argument erupt, suffice it to say that you
are not as smart as you think you are. That, or you are stupider
than I thought. Or maybe I am a trifle smarter than you think.
One of the three anyway.....probably #2, #1, and #3 in that order.

>> You'll need to do better.

> Skid-mark, in comparison to you I do every single day of my life!

You wouldn't be interested in proving it, would you? You know,
something downright meaningful? Something...ummm...persuasive?

>> Say, what's this I hear about you being a janitor and shipping clerk?
>> Latest word now is that you're a part-time weeny washer for Oscar-Meyer.

> Actually, that's pretty funny and I did get a good laugh out of it. 8-D

Funny in a very *sick* sort of way, yes.

> Too bad Oscar-Meyer doesn't even exist up here in Canada.

Ummmmm, not the company, no. But the phone book is full of
individuals named Oscar Meyer.

> It's also too bad that the last broom I pushed was during a
> summer job in high-school.

So now you have one of those motorized broom handles?
Big deal. You are still what you are.....

> I hope you weren't putting ol' Blake up to his nonsense on the Usenet.

I don't put people up to anything. Just you, puppet. But
you dance, whine, grovel, and snivel so fine.....

> He hasn't posted much there lately. I wonder why that is?

I dunno...maybe he's sick of you?

> I'll be down in San Diego in the spring some time for business.

Monkey business?

> Yeah, we send our Janitors down for special training in the
> US don't you know!

No, I didn't know. Of course you know that the phrase,
"don't you know" is the mating call of the Goodbuddy on
the CB radio. I wish you wouldn't bellow the call here
on the virtual medium.

> Lot's more bullshit to clean up in Cali' than there is up here!

Get with the program, then.

> You're in Mira Mesa, right?

Yup.

> Perhaps I can drop by your garage/lab during the day and shoot the shit?

Perhaps. This ol' "garage" just might have a red carpet
laying around somewhere. I'll see if I can find it.

> Yeah, that sounds like a banner idea!

Indeed......a capital idea....

> I sorely miss your contributions to the rec.radio.scanner group. Be a

>Is this a common failure? Is there a fix? Any help would be appreciated.

If the earphone jack is still live, you have a dead speaker.

This is a common problem on earlier units, which had a speaker that
couldn't quite handle the power that the audio amp could furnish.

An upgraded replacement speaker is available through Radio Shaft Parts.

4142. OS535

Newsgroup: rec.radio.scanner
Date: 1995-12-22 00:00:00 UTC
From: eevans@aol.com
Message-ID: <4bfk1r$orj@newsbf02.news.aol.com>
Source record: 244164

I read about an unlock code for the OS535 cellular frequencies several weeks ago in this newsgroup. My understanding was that it was only available to "proper" agencies.

My question is: If I were to keep sending codes to the OS535 until I found out what the code was, what would be the legallity of me posting the answer to unlock the OS535 in the newgroups or write a program that would unlock the OS535 and distributing it? Would the government or Optoelectronics come chasing after me? Additionally would Optoelectronics have to quit making the OS535, which I think is a great product?

The reason I ask this is because it should only be a matter of time before someone figures out what the code is.

Thanks in advance,
Eric

The Vendor: Motorola

The Problem:

System Software bugs cause system to become "one way" (base
broadcasts are heard, mobile responses are not) when traffic exceeds some
level (when you need the system the most, it goes into this mode apparently).

System Type: 800Mhz Trunking

This information is second & third hand from local news sources, and I don't pretend to have any insight. However, I had heard that this is only one of three (?) such systems in the country. I guess they should have expected to do a bit of "beta testing"!

: Well, since most of us don't have the magazine (and the local news stand
: doesn't carry it), can you post the gist of the article?

The most effective radar jammer known to man kind is 100% free of charge.
Drive the speed limit.

What everyone has said to me is they want to commit one crime so that they
can get away with a different crime. Speeding is a crime. So is jamming
a radar signal. One crime can put you in a local jail for a short time.
The other crime can put you in a federal jail for a long time. Either way
you try and justify it, these things are still a crime.

Since speed limits have been eliminated by the feds, in the state of
California they are writting tickets for reckless driving if the cop
feels that you are going too fast. This happend to a co-worker this
morning.

Wow would there be any signal left after that long a transmission
path?? Otherwise sounds OK though the cable may weigh more than the
ballon could lift. I know Edmund Scientific sells weather ballons that
would have the lift required to do the job. Next question would you
dare try this near an airport? Might intercept something else! :)

>that sounded like the speaker was buried beneath a mile of mud?

Yes the AR8K is as light as most modern cellular phones.

If AR8K and your ears are mutually exclusive items it is a simple
matter to add an external amplified speaker with tone control.
I have a whole raft of them for various ham radios and the AR8K.

The amplified speaker from Radio Shack has an interesting feature of
an LED that lights when audio comes in and gradually dies when the
audio is cut of. Sort of like a busy indicator which is handy if you
are listening to several radios while mobile and you aren't sure which
one that last bit of information came on.

How does that jam radar?? And while your doing the speed limit an officer
is actually receiving some truck but sees you and writes you a ticket. Of
course he believes you when you say you weren't speeding

>
> What everyone has said to me is they want to commit one crime so that they

> you try and justify it, these things are still a crime.

I look at it as a "Tax Shelter". The police agencies are committing a
crime when they use radar and laser, Higway Robbery. Just like Robin
Hood. Wait in the "woods" for innocent "rich" drivers and rob them to
give to the "poor". Speeding can *NOT* put you in jail, it's an
infraction (unless your doing 120 in a 25 in which case radar isn't needed.)
Jamming would be very hard to prove.

>
> Since speed limits have been eliminated by the feds, in the state of
> California they are writting tickets for reckless driving if the cop

> morning.

Last time I checked, California's limit is still 65. What happens when
you run into the po-dunk town, pop. 200, 5 cops all with radar? The speed
drops from 55 to 25 and you are nailed. Speed enforcement is a racket
pure and simple. Try getting fines reduced to say $40. Think it'd ever
happend? Hell, no. The profit margin would be nil.

I'll take my chances with a jammer

This statement is your opinion I think.

>THAT'S THE RULES IF YOU DO BRING YOUR SCANNER AND GET CAUGHT, IT'S
>GONE, GONE, GONE.

>AS TO MONETARY FINES??

What wasn't mentioned here is that this is an excerpt from the Manitoba
Highway Traffic Act (H.T.A.) and therefore applies in Manitoba only.
There are those in this province who think that this law is outdated
(note the use of the word Megacycles).

As for enforcement and fines, I don't know. One person (a ham BTW) had
his scanner confiscated by the RCMP in Manitoba. When the case was
challenged in the court, the charges were stayed. However it took a
number of months for the scanner to be returned.

This law is certainly valid for those apprehended for criminal activity,
but I don't think it should be used on just anyone.

Okay, it's MOTOROLA and it's trunked. Funny thing is they try to foil
scannists by transmitting NOAA WX broadcasts on channels (up to 3 at a time).
But the system is occasionally overloaded so why bother, what are they
trying to hide? Instead of screwing with scanner, why not concentrate on
FIXING it. Whoa, what a concept.

>
> Yes, Portland's new radio system has taken a beating in the media, and

> choice of spectrum.

Well, the Portland system is supposed to save spectrum. So why are they
soaking up channels with NOAA broadcasts? The public really hasn't
complained until recently because no one (in the fire and police dept)
has really griped. But, after
the storm, many wonder what we paid $8.5 Million for. The strong point of
Motorolas system is it's performance under pressure. Well, Motorola has
oversold a system that doesn't work. The storm was *not* that bad. About
3-5 hours of high winds. It was not the worst strom to ever hit by a long
shot. We bought the system so it would perform in a crisis. Any system
performs good on a sunny day. A lot of other agencies have complained
about trunked 800MHz systems, San Fran is even sueing Motorola. Motorola
is calling the problem the other day a "Nuisance". A nuisance? No comms
for 5 hours is a nuisance? As one officer put it, "When I'm involved in a
shooting, I don't have time to go to my MDT and type in 'HELP! HELP!'".
Motorola has still never explained why the system has gone down
completely numerous other times. This from a complany that said "it can
never fail!"

> *Happy home to a 24 channel fully repeated analog conventional 800 MHz
> radio system.

Glad yours works. Isn't LAPD still on the ASTRO 400MHz?

> I wonder how a series of small 20 watt halogen lights with IR would do.

The high beam trick isn't too useful. I read the article but I don't think it's a really good way to jam. Of course, you may get lucky. My idea was to use 2 or more Xenon Strobes and put IR filters over them. A strobe put's out loads of light and could probably trip the circuit in the laser gun. IR LED's have been proven to work under 800 feet but after 800 feet they're just not powerful enough. If you do use LED's make sure you have a few near the license plate and a few near the headlights. If an officer shoots your plate and gets no reading, they'll probably move to another high reflectivity area like your head lights. In conjunction with a Laserplate you could probably reduce you reflectivity enough to give the LED's a better chance. I'd like to try the strobe light trick but I don't have a laser gun and have no idea where to get one. I also don't have the cash to purchase some IR filters. I'm confident it'd work though.

Side note: Apparently some guns (LTI Marksman) supposedly have a light or beeper that trips when the presence of interference is detected. Big deal though, jamming IR is legal.

With the increasing use of digitial encryption by the Police, Fire and other public agencies. There is only one answer for citizens of those areas: Boycott support of those local agencies. What does that mean you ask ? Well when the police league comes around or mails you a letter for one of their programs write them back and tell them why you won't support them. If the city needs volunteers forget it! Ham Radio operators needed in city emergency or city event, The club should turn down request and tell the city that digitial encryption is the reason. There is no real reason to encrypt normal local police communications, except in times of civil unrest or terrorism and of course drug operations.
They are dozens of other ways to let the local government know that you are not going to support them in the blocking of communications by public servants. This isn't just for Hams or scanner owners, REACT, Volunteer Police and fireman can join in.

IMHO, Keith N6JPA

Tropez uses digitized speech, not spread spectrum in the currently
accepted definition.

Last I heard, AT&T and others had found it to be the best of the lot
and started putting their name on it.....

4171. FM broadcast station uplink freqs

Newsgroup: rec.radio.scanner
Date: 1995-12-22 00:00:00 UTC
From: Justin Bousquet <justinb@psg.com>
Message-ID: <4bebmn$kp0@vixen.cso.uiuc.edu>
Source record: 244277
Cross-posted to: rec.radio.broadcasting,rec.radio.scanner

I was curious about what frequencies are being used as uplinks to the transmitters.

I live in Portland, Oregon and I am most interested in the following stations...

92.3 KGON
94.7 KNRK <- This one mostly
100.3 KKRZ
101.1 KUFO

You see I would like to monitor the public FM stations out here without a walkman or just my scanner. Actually my amateur radio rig.

Any help would be much appreciated...Thx a million
Justin AB7NG

: I've seen a few discussions about scanner use on airlines. Some
: of the information seems to contradict some other info. Has
: anyone made up a list of what airlines allow scanner use? I've
: taken two recent trips and my results were mixed. I just got back
: from a round trip on Delta and reading the rules for personal
: electronics devices listed in the back of their inflight magazine,
: it specifically mentions scanners and says they may be used during
: flight but not during take off and landing or while on the ground.
: On one flight a flight attendant did ask my what I was listening
: too and asked me if I knew if it was ok or not. When I told her I
: checked the magazine she was happy with that. On a recent flight
: on America West, I did the same thing and their magazine didn't
: mention scanners specifically, but the vaque language led me to
: believe that it was ok. I was challened on that flight by a
: flight attendant. When I showed him what I read in the magazine,
: he referred me to another part of the rules where it did
: specifically say that vhf receivers were not allowed and he told
: me to turn it off. Is anyone keeping a list of what airlines allow
: or disallow scanners? To summarize my most recent experiences:
: America West - NO
: Delta - Yes - inflight If anyone wants to mail me their
: experiences with different airlines, I'd be glad to put it in a
: FAQ to be posted periodically.

USAir - yes, in flight.

>
What does "mapping" mean here?

>Also, does anyone have a ranking of the RS PRO-XX/Bearcat handhelds
>in order of performance/features? I know KC5KTO's list is in
>numerical order, AND that a listing by "performance" is very subjective,
>but I'd like to find out where my PRO-51 stands, and which models
>are "better" than it.

==========
Trying to rank scanners like this is useless. All such rankings would be
so subjective as to be good only to the one making the list.

Instead, try this:
Find out which features are usefull to *you*.
Find which scanners have those features.
Those scanners are at the top of *your* list.

And that's what's important, isn't it? Who cares what *I* think of the
Turbo 1200 Micro-Mate scanner? If it doesn't fit *your* needs, it really
doesn't matter if *I* think it's the best thing since toilet paper, does
it?
If your PRO-51 serves your needs, it's a great scanner.
Which ones are "better"? The ones you want next. And there's no way we can
tell you that.
As your experience expands, as you learn what's available, your list of
wanted features will change. Is speed, for example, really important? Here
in Phoenix, which is very target rich, speed is not very important,
because the scanner stops so often. Much more important is the ability to
manage frequencies; this can best be done either with computer control or
multiple scanners. But that's *here*, for *me*. So, for me, a setup of
several scanners, with one computer-controlled, works great, and is part
of what I use to decide what to buy next. For someone else, in for example
a small town, one scanner may handle everything. But there, speed of scan
would be more important, with the ability to scan at least as many
frequencies as are being used. More than one scanner might not be of any
use in that situation, and computer control may not be anywhere as
important.
Do you see what I'm trying to say? While we can help with frequencies,

scanning strategies, and more, we simply can't decide which scanner is best for *you*, nor can we make a list by features *you* consider important. Only you can do that. It's *your* hobby. Do it *your* way. That's the only right way.

Bill Funk

If anyone has had this problem and or have taken apart the AR8000 I would appreciate your experiences, how you openned the case and how the BNC is tightenned. I located the 2 screws in the battery compartment but am not sure what else to remove.

Thanks,

Frank.

4182. Re: Radar Jammers Work?

Newsgroup: rec.radio.scanner
Date: 1995-12-23 00:00:00 UTC
From: billn@PEAK.ORG
Message-ID: <4bfktd$cr6@odo.PEAK.ORG>
Source record: 244191

Mike McCarty (jmccarty@spd.dsccc.com) wrote:

: For example "Not if you know that it is jamming another device. That is
: illegal, even if you are transmitting on another frequency." Well, any
: HAM knows better than this. What is required applies ONLY to the
: transmitter, and the quality of the signal it radiates. A receiver which
: gets jammed by a transmitter which puts out an acceptable, legal signal
: is not the responsibility of the transmitter. Period.

Check the rules again. Better yet, call the FCC. They have forced Hams
to either run restricted schedules, or use severely reduced power, if
they caused interference.

Intentional interference is always illegal - regardless of whether your
rig is operating correctly or not.

: And "A passive device can radiate a signal. A radar corner reflector is
: a good example..." A reflector reflects. It does not radiate. A radiator
: radiates.

Put up an antenna that is resonate at the operating frequency. It will
radiate part of the received signal.

The distinction is subtle.

: I wish this thread would either die, or the people contributing to it
: would stop spouting off opinions and quote applicable portions of the
: regulations; see the attachment following my comments.

: First, whether you build it at home, buy a kit, or purchase a built
: device, section 5 of part 15 applies.

: Second, such a device must not cause interference. And the operator must
: cease to operate the device. But the person authorized to inform the
: operator that his device is causing interference is an FCC agent, not a
: policeman.

This is true for unintentional interference.

Further, the policeman is free to arrest you for interfering in the
performance of his duties. Those are state and local statutes, and do
not specify the method of interference.

: Third, there is nothing in Part 15 which makes it illegal to own, or
: possess any device at all. Even operation is not illegal, only
: continuing to operate after being informed, or resuming operation before
: correcting the condition causing harmful interference.

First, tell that to the FCC, who have confiscated equipment (and fined the individuals as well) from CB operators who had linear amplifiers in their possession.

It is also illegal to operate out of your assigned bands, or produce over a certain level of spurious signals or harmonics. This is true even if you are not interfering with any other equipment.

Keep in mind that Part 15 of 47 CFR, especially the portions you quoted, are not all of the regulations that govern transmitter use.

Bill

Why would they do that? There is no need to go that high for line of sight transmissions. Two or three hundred feet would be sufficient, expecially if they were on top of a hill - to start with.

The only reason to use a balloon would be if they needed to move their station frequently.

They're legal in B.C., and Alberta. B.C. has been legal as long as I can remember, and Alberta re-legalized them within the past 5 years, although many drivers that use them get false readings when they use Highway 2 between Edmonton and Red Deer due to all the microwave towers. Scanners are completely legal in all areas of Canada except Manitoba (I believe mobile scanning is illegal there). That includes the cellular band. It's legal to listen to that band, but you can't record it or tell anyone what you've heard (just like everything else you hear on a scanner). Most if not all scanners sold in Canada are not able to pick up the cellular band as they come from the U.S.

If your talking about the MT 500's (they were produced in the
70's), the model number will tell you are the information needed about
the radios. They came in low band (30-50), VHF (150-175), or UHF
(450-470), with 2 different power levels, 1-6 channels, no PL, PL, or
digital PL. The coding was as follows HxyBBBz1w---- (or HxyBBUz1w----)
where x is power level (2 -2 watt, 3 - 5 watt/4 watt UHF)
, y is frequency range 1 - low band, 3 - VHF, 4 - UHF, z determined what
type of PL, 1 - carrier squelch, 3 regular PL, and 6 - DPL, the w
determined the number of channels (1,2,4, or 6). There were also 2
different size radios, the slimline models were low power and the wider
ones were the high power multichannel. Each used a different type of
battery and charger. The batteries/chargers were interchangeable with
the HT 220 series radios. Actually looking at my notes, the VHF range is
listed as 136-174, and UHF from 403-512 but they're rare and used
high-side injection. The band split wasvery narrow on multifreq. radios
(1/2 meg at tops). Hope this information helps. Jerry Abrams WB2ZEX

: >antenna?

: From what I've read, this is what TV Marti does in the Florida Keys to
: get their antenna up 10,000 feet, in order to deliver their signal to
: Cuba 90 miles away. I'll bet their balloons are a bit larger, though.

The government has 2 balloons, which are tethered. We saw one up while
in Key West, which is about 30 miles south of the key with the balloons.
They look like small blimps. As we drove up there to see it, they were
bringing it back down. We talked to a local who told us they were
originally drug radar blimps. They converted one to transmit TV to Cuba.
It seems that the locals see it all as a huge waste of money.

I don't think it get up anywhere near 10,000 fet. Maybe 1,000 feet.

In regard to the original question, some hams did this with a kite or
ballon. The wind crossing the wire caused static electricity to build up
which damned near electocuted the guys.... (This is also why car
antennas have the little ball on the top. It prevents voltage buidup in
the antenna from the air rushing across the antenna.)

Lightning rods have pointed tips which allow built up charges to
dissipate.They do NOT attract lightning.

4206. F.D.N.Y. HT F-7???

Newsgroup: rec.radio.scanner
Date: 1995-12-23 00:00:00 UTC
From: JRM <e54t4bc9@gate.net>
Message-ID: <4bh94b$1ruc@news.gate.net>
Source record: 244215

FDNY units carry (2) Motorola Sabers. 1 is loaded with the Boro's and CityWide, the other only has the Handie Talkie (HT) freqs loaded in them.

Here is a list I got from a friend that shows the Handie Talkie channel assignments along with the frequencies... There is no F-7 listed, yet found that in a HomePage. See bottom...

Handi-Talkie Frequencies (Sabers)

F-1 TACTICAL 153.830 (Primary)

F-2 COMMAND 154.430 (Secondary Command)

F-3 QUEENS MOBILE 153.770 (Command-3)
Primary CMD, MN, SI, BX,BK

F-4 MANHATTAN MOBILE 154.010 (Pri Command)

F-5 BROOKLYN MOBILE 153.950 (Secondary Tactical)

F-6 BRONX/STATEN IS. 154.070 (Secondary Tactical)

As most FDNY radio listeners know, the HT's with the exception of F-1, are the TX side of the Boro Frequencies. So when this list says F-4 is "Manhattan Mobile" that really means it is the TX freq for Manhattan Radio which recieves on 154.250.

I found on someone's homepage a list that has an F-7 (153.890) for the HT's. That frequency shows to be the TX side of CITYWIDE, which Recieves on 154.430.

Does anyone know if they use this or have it loaded into the HT Sabers?

Thanks and Happy Holidays,

Can anyone out there with the schematic for a 760 please tell me what the proper voltage is for the miniature bulb which backlights the LCD display?

My meter shows it being fed at 8.19v, so I'm guessing 9 may be the right number, with them underdriving it a bit to prolong life.

RatShack only had 6v and 12v bulbs of this size, so I substituted a 12, which does an OK job, but is of course not very bright being driven at this voltage.

That verticle element and coil is for the VHF-Lo band, 30 - 50 Mhz. A 4 ft CB whip should do. The threads on the RS Discone are not a standard 3/8-24 so you will have to find something to match.

==========
Speed limits have *not* been eliminated by the FEDs. I have no idea where
you got this idea.
The Federally imposed maximum speed limit of 65 MPH has been eliminated.
This is a far different thing.

The concept of "reckless driving" for driving in a reckless fashion is not
new. I feel rather safe in saying that your co-worker got a reckless
driving ticket for driving in what the officer thought to be a reckless
fashion. This has nothing to do with the recent Federal action, but rather
with your co-worker's driving.

Even in California, there are still speed limits.

I think there may be some confusion, here.
5 to 30 MHz is not scanner territory, it's HF, or shortwave.
There are scanners that include this region in their receiving range, but
without a decent SW antenna, they are extremely limited as to what they
can receive. Such a scanner is a compromise, and is nowhere as good as a
seperate SW radio, even an el-cheapo model.
A shortwave radio is really a specialty all its own. You might try on
REC.RADIO.SHORTWAVE for more info.

Source record: 244089
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.shortwave

I have an Icom R-100. For what I do with it, this is WAY more than I need. However, I have a need for a quality SW reciever with Sync.... I would be willing to work something out for one of the following:

Sony ICF-sw77
Grundig Satilit 700

I would also think about selling the unit for $575. I have the manual/box etc. The Ideal trade would be for a satillit 700/Pro 2006.... Any ideas? Contact nate at herb@csd.uwm.edu.

PS: this thing has three antenna inputs, and with a wire in the 0-60mhz input it works well on SW. It has an attenuator, and preamp. 100khz-1856mhs continuous, FULL 800 coverage. The radio is mint, and quite excellent for band scanning.... I can't use it on SW because it has no SSB, and I'd like sync. There are 100 memories, and 9 scanning modes.

Sorry, I promised myself I wouldn't write a story about it!

Nate, KB9LSX

4228. Are there just two mods for BC200XLT ??

AOR 1000 I am told is a great piece of tst equipment for RF people.
The AOR 1000 before april 94 have full frequency coverage from 1 -
1000 MHz no dead spots. After april 94 the cell frequecnies were
blocked. hope this helps

I'm sure that you can find an unblocked, refurbished model without much difficulty from one of the mail order companies such as EDCO or a used one for a decent price.

It's a very good scanner--as a former owner, my only complaint was that it was useless for SW, which you would expect, and two it was a real chore to program.

Don't know where you are located, but for many areas, the "ScannerMaster" guides are clearly the best. They cover all of the public safety freqs, many of the other services, many federal freqs, a lot of info on system operation, 10-codes, unit numbering, etc. Plenty of input from scanner listeners in the particular area, not just a rehash of an FCC list. Not all areas have a ScannerMaster edition though.

NEWFLASH!!
Grove has been selling 26's for months! It's $349.95 in their
Nov-Dec Catalog, or order from them at www.grove.net. You can
buy a used one for probably under $300 by now.

: Where are your priorities? So, you are going to boycott police simply because
: they encrypt their comms. Oh, well, why don't we just boycott ALL of the
: advertisers on the normal satellite channels that scramble their broadcasts...
: Hey, how about boycotting the countries that don't speak your language...
: I think you are a tad bit TOO addicted to scanning to suggest a boycott of the
: police. There's more to life than just listening to a bunch of "Alfa Nine
: Two's".

God Keith, get a life! I don't think you understand what your plan would do.
Say it did happen. Do you think that they are going to stop encrypting
signals? No way. This is called progress. I remember when people where all
upset over the MDT's years ago. Soon they wont be using voice at all, it
will all be done using upgrades of MDT's. Going to cry then? In fact if your
plan was ever to go in effect, they would have to rely on MDT's and the
digital system to compensate for the loss of volunteers. Thats just a small
part of it. When your plan goes into effect, then cities would have to hire
more officers. This means a TAX HIKE! All this because someone could not
monitor a police or fire department. Fehh...

I for one am glad that a digital system is in effect in many cities in the
U.S. It all has to do with privacy. I hear names, address, and VIN's going
over the air all the time. I don't think that a single female wants some
scanner creep looking her up. People that have "wants and warrents" out on

them also gain from this privacy. It is non of our business if a person has a "want" out on them.

Try reading some of the stalking laws on the books these days. Scanners are talked about. Why? They can be used to monitor security for someone that is being stalked. A scanner is a dangerous toy. Over the years this has been proven time and time again. It is up to the users to not abuse this privlage of scanner monitoring. Everytime it gets abused a new law goes into effect. Think about it.

I was at Dave and Busters restaurant in Philadelphia last night. They use HT's to move the customers around. I didn't have a radio but the Scout had hits on 464.2375.

D&B is also in Houston, Dallas, Atlanta and Chicago [in the States]. Curious is they use the same frequency in all restaurants or what? Anyone in those cities have any idea?

Merry christmas all...

Santa was GREAT to me this year. I found a discone scanner antenna in my stocking (the Rat Shack one).

Does anyone have any info on this antenna? What cable should I use to connect this antenna to my scanner? Is there anyway to improve the preformance? ect. ect.

I plan on putting it in my attic for the short-term and possibly mounting it on a tower in the distant future.

All your help is greatly appreciated. Please e-mail to me directly.

The wife purchased my first scanner for my Christmas present (realistic Pro50). When she asked the 'all to intellegent' counter person for the frequencies book he replied "It's in the box". Naturally the owners manual does not have exact frequencies.

I've read all the FAQ's and FAF's I can find on the net in the last hour (THANKS for all that GREAT information) and I'll stop by 'the shack' as soon as it opens to buy a freq guide.

But until that time (an unlivable 20 or so hours from now!) I'd really appreciate if someone could e-mail me the freq for some stuff in Franklin County Missouri. (County Sheriff, Union and St. Clair police, fire and ambulance, etc.)

Thanks... (Note that the wife has picked up the scanner as I was logging on and she's already found the neighbors cordless phone! Maybe it won't be MY scanner afterall!)

Hi Dave:

Saw your post about the Digital Trunk system and the newsmedia where you live. Here in Honolulu, Hawaii, the news media will ALSO be allowed to purchase a radio that has LIMITED talkgoups in a monitor only capacity. The word I got was the price tag : $3000.00. This is due to the fact that they need a Ericcson EDACS Control Station Radio with AEGIS Digitial Mode Option.

73's & Happy Holidays from Hawaii........

>Just my evaluation. Your mileage may vary.

Indeed it has.

I have had a recurring problems with Renewals purchased over a 2 year period (including some sent to me as replacements by Rayovac) and 3 different chargers used at home and in the office. The cells develop internal shorts (like nicads) and die prematurely by leakage, or failure to reach or hold full charge.

The telltale sign is that they get HOT when charging, and the LED on the small charger never goes out (or takes a very long time) as the cell does not reach target voltage easily.

Rayovac at first told me this was a problem confined to the very first batches of AAA cells, where I first reported it to them. However it continues; I at present have several sets of AA, AAA, and D cells in use, in which one or more exhibits this phenomenon to some degree. Once a dendrite starts growing inside a cell, it gets worse worse until the cell is unuseable, or I take it out of service ... or it explodes in the charger.

If one cell in a set (as originally packaged) goes bad, eventually all four will. Quite a few sets I've used are "clean" and none of the cells ever goes bad; it dies a natural death (shorter and shorter discharge cycles).

I am much less enthusiastic about Renewals than I once was. Rayovac's only answer has been to replace the cells (I've stopped bothering to call them - I'd be doing it every couple of months) and advise me to discharge them less deeply (using a beeper battery one week on a charge is too deep??????). They've offered to relace my charger; but when I tell them that three different chargers (two PS1's and one PS2) all do the same thing - they back down since they realize it's not the chargers' fault.

I've mailed dozens of defective cells to their "inspection" division, where returns go to. Not a peep.

Truckers stay on CB channel 19
Most State patrol frequencies are on the 42Mhz band. If your
scanner has a programmable search mode, program in 42-45Mhz
and run a continual search. Also be aware of repeater frequencies.
These are on the 154-156Mhz and the 456-457Mhz band. Different
states do things different ways. Hope this helps

Mike (MBATR)

Since the discone is a zero gain type antenna, do what I did-use
Belden 9913 feedline. It is VERY low loss but kind of stiff to work
with. I use it on my Diamond D-130j discone and it works great! I
understand that you can put a cb type antenna on top to improve low
band operation.
Have fun!

Steve

Dan Dreiszus (dand) wrote:
: Anyone have any ideas why a newer Pro-43 would lose its sound?
: Is this a common failure? Is there a fix? Any help would be appreciated.

This could be caused by a number of things. Including shoving in the
wrong external speaker plug in and bending the contacts inside. In
short, you're gonna have to take it apart and have a look. If you are
not familiarwith electronics you may want to find someone local that is.

Cheers!

I have to agree that the net has been pretty quiet regarding this model. However, I have been using one for about six months now and have nothing but praise for it. It is one of the few that I have seen with a dial to incrementally tune both memory channels and freqs. I don't know how well it does with rejection of unwanted signals since I live in the country well away from the city and most commercial transmitters. I have connected it to a random length vertical made from one of the guy wires on my antenna mast and it seems to be doing very well. One of my interests is aviation and I can pick up the two major airport ground stations at around 12 and 16 miles away. This is not intended to be a technical report on the 2036, just a reply from a satisfied user.

Merry Christmas,

Hmmmm, didn't Hitler ban the listening of radios because he didn't want the people to listen in too. I work in the public safety field and see things on the MDT's all the time that if the public was ever able to read some of those messages the officers who sent them would have been either suspended or fired! When there are no checks and balances more often than not things get abused. Why do these officers use the MDT's rather than the two-way radio you might ask. They believe the public can't monitor or view their transmissions. If the public could monitor the MDT's you can bet on it that the officers would watch what they type over them. Also cars kill more people than scanners...Maybe we should ban them too since the government thinks they can protect us from ourselves!

| >
| > While "800 MHz" is frequently mentioned as the scourge of public safety
| > radio, it saddens me when folks don't make mention of the vendor or the
| > presence (or absence) of trunking technology. Not all "800 MHz" radio
| > systems are designed, created (or maintained!) equally.
|
|
| Okay, it's MOTOROLA and it's trunked. Funny thing is they try to foil
| scannists by transmitting NOAA WX broadcasts on channels (up to 3 at a time).
| But the system is occasionally overloaded so why bother, what are they
| trying to hide? Instead of screwing with scanner, why not concentrate on
| *FIXING* it. Whoa, what a concept.
|
| >
| > Yes, Portland's new radio system has taken a beating in the media, and
| > more importantly - in the eyes of the public. There are however, many
| > agencies in our country that have thusfar had a -very- positive
| > experience with the 800 MHz band. It troubles many of us to no end that
| > we are often labeled as being "wasteful" or "fools" , solely upon our
| > choice of spectrum.
|
| Well, the Portland system is supposed to save spectrum. So why are they
| soaking up channels with NOAA broadcasts? The public really hasn't
| complained until recently because no one (in the fire and police dept)
| has really griped. But, after
| the storm, many wonder what we paid $8.5 Million for. The strong point of
| Motorolas system is it's performance under pressure. Well, Motorola has
| oversold a system that doesn't work. The storm was *not* that bad. About
| 3-5 hours of high winds. It was not the worst strom to ever hit by a long
| shot. We bought the system so it would perform in a crisis. Any system
| performs good on a sunny day. A lot of other agencies have complained
| about trunked 800MHz systems, San Fran is even sueing Motorola. Motorola
```

| is calling the problem the other day a "Nuisance". A nuisance? No comms
| for 5 hours is a nuisance? As one officer put it, "When I'm involved in a
| shooting, I don't have time to go to my MDT and type in 'HELP! HELP!'".
| Motorola has still never explained why the system has gone down
| completely numerous other times. This from a complany that said "it can
| never fail!"
|
| > *Happy home to a 24 channel fully repeated analog conventional 800 MHz
| > radio system.
|
| Glad yours works. Isn't LAPD still on the ASTRO 400MHz?

It should be noted, although the folks at "Bat Wings" screwed up bigtime
with the trunking software, there a lot of Johnson LTR and G.E. EDAS
systems that DO work.

My REAL point, to ALL you scanner folks, don't feel that importent, the
reason Is NOT to screw up scanners, as I said , your
really not that importent.......

Just a little more "food for thought"

Though there is some truth in the above post I have APD on other
frequencies. Just plug all the ones found in the new RS Police Call
1996 and you will spot what is going on.

Anyone interested in helping me set up a series of pages on monitoring
the Olympic's and the sounding areas? There have been major changes in
the metro area in the last year or so an many frequency guides are out
of date.

I need to search my hard disks for the old scan atlanta data as that
would be a good place to start and then update it.

I have used an AR1000 for the past 5 years and found it to be very good. It has a great frequency range (8 to 1300 Mhz) and can receive AM FM and FM Wide. This model is no longer manufactured. The newer models have a wider frequency range and more features (and probably cost less than mine did originally!).

My only complaint is that the keypad has worn out and has to be replaced. The shop estimates about $35 to fix. Not bad after all this time.

Hope this helps.

From: VUBS79A@prodigy.com
Message-ID: <4bmpk2$asc@usenetw1.news.prodigy.com>
Source record: 244131

I was browsing through the radio books yesterday at Barnes & Noble and i came across a very interesting book on scanners. I forget the name of the book, but it contained a section on legislation regarding scanning... both federal and at the state level. It noted that Kentucky recently enacted the nation's most sweeping anti-scanner law. According to this book, mere POSSESSION of a scanner is illegal in Kentucky...even if the scanner is being stored for transport in the trunk of a vehicle. It also stated that amateur radio operators are NOT exempt from the law.

It seems there would be several constitutional challenges to this law, not the least of which would be the illegality of possessing a scanner, inoperable, in the trunk of one's car while traveling through Kentucky. Would this not be a clear violation of interstate commerce provisions of the U.S. Constitution?

Hello,
Does anybody have the MODs for a Radio Shack 2035.

Please respond to nwokobia@panix.com and nwokobia@airwolf.com
thanks

4300. $450 (price reduced)-Yupiteru MVT 8000

Newsgroup: rec.radio.scanner
Date: 1995-12-26 00:00:00 UTC
From: lmilrad@passport.ca
Message-ID: <4bpovu$oct@diplomatic.passport.ca>
Source record: 243987
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The MVT 8000 is a brilliantly designed angled front panel, 200 channel ac/dc scanner. It has a mounting bracket for mobile use and comes with a cigarette lighter adapter although it can be hard wired. I use mine as a desktop unit in my office. Due to its small footprint, it occupies very little space on my desk.
It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz. It's got a 10 band search function, pass memory function, and other goodies found in high-end scanners.

Although seemingly assigned on the front panel by preset factory settings, searches are categorized to conform to channel numbering as follows:
Channel No. Frequency Limits Band

1 76.0000-90.0000 FM
2 108.0000-142.0000 Air V
3 250.0000-327.5000 Air U
4 144.0000-146.0000 Ham V
5 146.0100-154.5000 Fire
6 156.0000-162.0500 Marine
7 347.1875-363.0500 PoliceU

8 430.0000-440.0000 Ham U
9 850.0250-859.9750 MCA
10 903.0375-904.9875 PRNSL

Of course, you can change factory settings, but best of all the coverage is continuous with no blockages. It also has a battery save function.

4301. Need Bearcat Scanner Info.

Newsgroup: rec.radio.scanner
Date: 1995-12-26 00:00:00 UTC
From: legeros@bessel.nando.net
Message-ID: <4bprb8$ch@bessel.nando.net>
Source record: 243988

I need some Bearcat scanner info. I recently purchased a "350A",
50-channel, 11-band mobile unit (for $99) and I am not completely
satisified with it. Can anyone advise me on my options with regard to
later/newer Bearcat mobile models? I can live without "800" capabilities,
but I would like a "priority" feature, as well better backlighting for the
display. Direct numeric entry would be nice, as well. Do later models
offer any such features? I've seen an expensive model at Best Buys, with
a built-in "highway patrol alert" feature. I can live without that. The
scanner will be used, primarily, to monitor a pair of fire channels.

Any information, advice, etc. is appreciated. Please e-mail. Thanks.

mjl

This and other messages posted by Cheek and Moss absolutely astound me. I find it utterly confounding that these two would air these exchanges in public. This is the sort of thing that one would expect to find on the playground. Gentlemen, you merely continue to confirm what everyone has long realized: neither one of you has anything remotely interesting to say. Take it somewhere else, preferably in a mud pit where no one will notice either of you.

It depends on what kind of 'noise' you are talking about. If it sounds kinda like a loud diesel engine, then it's simply the trunking system data control channel, and probably (but not absolutely) is your best bet if they are in the 800MHz range. It carries coded information that is picked up by all the radios in the radio system and is the "brains" that coordinates all radios and the frequencies they use. This data channel does change from time to time (day to day) to distribute the wear and tear on the repeater.

The other type of noise would be true digitally encrypted transmissions, which would sound more like modem noise (an annoying, roaring sound). In this particular case, yes, the police are encrypting their transmissions so you cannot hear. These digitally encrypted transmissions are currently just about impossible to unscramble with the technology available to the average scannist.

Hope it helps, and don't give up. Your method of locking out the control channel is a common technique for trying to track trunked radio transmissions. It's sometimes a manual task, and it helps to turn off your scanner delay since a conversation can bounce over several different frequencies, adding to the "challenge". You don't want your scanner sitting on a 2 sec. delay while the chatter continues on another trunk frequency.

Mike

Certainly sounds like your hand-held is an amateur-radio (ham) vhf
transceiver; the keypad is for entering the frequencies/channels and for
DTMF (touch-tone) applications on repeaters; this radio requires the
posssion of a ham-radio operators license to both own and use, so in fact
just being in mere possesion is an FCC offense; despite that, so long as you
don't interfere or transmit on amateur or commercial frequencies I doubt
you'll run into any problems, and you could use the radio as a receiver on
these bands with relatively little fear of prosecution; if you have no use
for it you might try posting a "for sale" in the amateur radio newsgroups -
of which there are plenty, even one solely dedicated to selling used
equipment. Of course you will need to provide at least a make and model
number in your post, and if you have no idea of the going price, which
would also depend on the condition of the radio, you should be able to rely
on the ethics of the ham-radio community to make you a decent offer.

When I scan the local police channels, my scanner will stop on a channel that is broadcasting continuous noise. I will then have to lock out that channel in order to continue scanning.

The next time that I scan the police band, it will be a different channel that I have to lock out for the same reason. Are the police attempting to prevent the public from scanning their frequencies?

From: garya27446@aol.com
Message-ID: <4bo1r7$26v@newsbf02.news.aol.com>
Source record: 244063

You're correct on the method used for clocking speeding vehicles by CHP aircraft. They pace the plane by putting the speeding auto (most of the ones they target are <very> obvious in relation to the other traffic) off their left wing. That means they're flying off to your right side and usually invisible. They increase or decrease the speed of the plane until the vehicle is not moving forward or backward in relation to some part of the plane--usually the wing or wing strut. They then follow along for 1/4 mile or so and watch the plane's speed. How do they know the speed of the plane? These days there are several electronic navigation instruments that are accurate enough to show absolute airspeed, not the airspeed determined by on-coming wind pressure (which is skewed by the wind speed).

All this is pacing is timed to coincide with the speeding auto's passage of an on-off ramp. Usually it's an underpass cross-road. That way, the waiting CHP Mustangs aren't visible to freeway traffic. As the plane finishes is pace, it radios to the ground units that the auto is approaching and gives its description and lane number. "OK, I've got a blue Ford Taurus in the number one lane at 95." At that instant, the next-in-line CHP Mustang (usually there are 3 or 4) hits the accelerator up the on-ramp. Vroom-m-m-m! If done right, they appear directly to your left (if you're the target) exactly at your speed. Poof! The red light goes on immediately and you've been had.

Jason: The RS discone is a good antenna. Beldon 9913 is an excellent cable to use. If you're area is prone to electrical interference of any kind, I strongly suggest using quad sheild cable. If 9913 is out of your price range, RG6 is an acceptable substitution. RG58 & RG59 are NOT acceptable, unless your cable run is less than 20FT or so.
Also, the RS discone does not come with a vertical element. This is (depending on your area) essential for reception of the lower band freq's. A friend simply installed a mobile CB antenna as the vertical element & noticed a great improvement on cordless, CB & lower amateur freq's.
Good luck and happy scanning!
Gary in Baltimore.

Ever wonder why people: PARK on DRIVEways, but DRIVE on PARKways???

You are tuning the data channel on a system of trunked channels.
The data channel changes every day.
While annoying, this really isn't an intentional effort to jam scanners;
that's the way the system works.

I have been toying with the idea of buying an inexpensive scanner for goof-off portable use. The UNIDEN SPORTCAT 150 looks like a decent contender, having the 800 Mhz band and all.

I have seen the question asked here before, but I never saw the answer...

Are there mods available/known for this unit to receive "extra" 800 Mhz coverage? Just curious, of course.

I have checked most of the web sites that discuss mods and haven't seen one for this. Thanks in advance for any info!

Message-ID: <4bphj4$3jm@tech.cftnet.com>
Source record: 244078

I have a Bearcat 200xlt that seems to have died. I have power to it as the unit scans (visually), but when I open the squelch, it will not stop on a channel and I get no noise when the squelch is opened. I am sure something major is wrong. I dont hear the speaker pop when I turn it on, I used to hear that when it was working. The unit is at least 4 years old

My question is:

Has anyone sent a "dead" unit in for repair and not been charged an arm & leg for the repairs?

I am not sure if it is worth sending out for revival.

Tnx for any comments or suggestions

From: Nocturnal Emission <tubegod@cml.com>
To: Bill Cheek <bcheek@cts.com>
Subject: Re: Hey Weeny Washer

> Seasons Greetings Butt-Cheek!

Same to ya, Nocturnal Emission. That's a real nice handle
you picked for yourself. Probably best fits your most
intimate experiences.....

> Well, after your PLL gaffe(s) it would appear that I'm miles ahead of you!!!

You are free to think whatever you like. If it makes you
feel like a mighty big man to be miles ahead of me, then
think it. Who cares? All I ask is that you consider hiring
someone to do your thinking for you. You'd get better results
at a lot lower cost.

>> You wouldn't be interested in proving it, would you? You know,
>> something downright meaningful? Something...ummm...persuasive?

> I don't need to prove anything to you that I haven't already.
> If you can't accept the proof that's your problem and not mine.

I thought you might wimp out. You always have. You always will.
You don't have a hair in your sweet patooty to get up and make
your words count. But then, Andy m'boy, you never could count.
And you don't count.

>> Funny in a very *sick* sort of way, yes.

> And besides, what's wrong with being a janitor?

Nothing, if you're a teenager, or otherwise incapable of doing
anything else. I guess it's ok under those circumstances. A
body can be whatever they want to be. So if you want to be a
janitor, then that is certainly within your rights. All nincompoops
and imbeciles should get to be a janitor, if they want.

> As for me, sadly (for you) I work in engineering.

I know..... "sanitation engineering". Poor little fellow.....

> <yawn> Cheek, this Andy-is-a-homo schtick is getting kinda old. Can't
> you come up with something new that is actually believeable?

Who said you were a homo? Do you have a guilt complex?
If you can't help it, don't worry about it. If you CAN
help it, then get help. <shrug>

> I pick apart your on-topic posts and you come back with character
> assasinations.

You don't pick apart anything.......and what character?
You have no character to assassinate. You're a zero, Andy m'boy.
Zilch. Nada. A nocturnal emission at best; a nostril emission
typical; and a rectal emission, at worst.

> And you are still what you are - pathetic, a liar, a thief, a user, a
> crook, a cheat, homo-phobe, an asshole, a bully and easy to get a rise
> out of!! Hahaha!!!

Heh heh heh.....can't you find something better to call me?
Late-for-dinner would *really* hurt.

>> I don't put people up to anything. Just you, puppet. But
>> you dance, whine, grovel, and snivel so fine.....

> Hmmm.....you just went from the offensive to the defensive, Cheek. Gee, I
> guess I was pretty close with that one, eh? I feel sorry for him to be
> honest with you. You're an open book, Butt Cheek.

Then read this, Nocturnal Emission: You *are* MY puppet. I
am on your mind, night and day, day in and day out. I am an
obsession to you. I jerk a string and you dance. I push a
button, and you sing. I goose you and you whine and snivel.
I do nothing but leave you the hell alone, and it pisses you off
all the more.

You are an unfortunate little boy, totally out of control and
out of touch with even yourself. I really pity you, son.

AM> > You're in Mira Mesa, right?

BC> Yup.

> Surprise?

Noooooo........not at all.

AM> It gets better - much better believe me........

Cool. DO it. Show your stuff. The good Lord made some men
outa flesh & blood. Others, he made out of shit. Is it a mere
coincidence that all you do is sling shit? I think probably NOT...

BC> Perhaps. This ol' "garage" just might have a red carpet
BC> laying around somewhere. I'll see if I can find it.

AM> Great! I'm looking forward to it! I already have your address so
don't
AM> bother sending directions I'll find it. If you like I'll let you
know
AM> when I'll be in the neighborhood so you can be ready for me.

Cool. Hurry! Quick! For two reasons:

1) I can't wait!
2) I'm moving in February and you'll get lost finding the
new place.

>> YOU, my fine feathered fellow, are the farthest thing from a
>> challenge as can be had. Your goodbuddy was better than you.
>> Sic HIM on me again, what say?

> I don't even know who you are talking about here. Unlike you, I don't
> need to be surrounded by yes-men to feel important.

Just men, huh? :-)) [You know good and well what I meant!]

Pity. You are the sort of person who cannot ride their own
star or surf their own wave.....instead, you try to hop on
someone else's..... Prove up, Andy m'boy. Hop on your own
star and ride it for all it's worth. But...you CAN'T, huh?
Instead, you wallow in your own limitations and messed pants.
I'll bet your mommy is tired of changing your britches....

>> Had you ever pontificated on the idea of hiring someone to do
>> your thinking for you? You couldn't find your sweet patooty
>> if it was in front of you. Proof? Look just above your chin.

> Pontificated? I think you meant "pondered" there.

No. I said and meant..... pontificated.

>> Heh heh heh.........I'll bet.........

> The responses would simply blow your mind...........

Then blow it. Cough up. Lay it on the line, Andy m'boy. You
sure talk a line of shit a mile wide. Throw some ACTION out,
what say? Let's see what you are made out of.... heh heh heh...

AM> > From me & mine to you and yours I wish you a Christmas filled
with
AM> > pestilence and a financially-dismal New Year!!!!!!

BC> I suppose that says it all, doesn't it? I really appreciate
BC> a nincompoop who resorts to threats. You've done well,
BC> Andy, m'boy. You've done very, very well.....indeed.

AM> I don't see a threat in there any place.

Suit yourself. Looks like a thinly veiled threat to me.

AM> And besides, you're the expert on threats, as evidenced by
AM> that silly-buggar letter sent via Finland.

Beg your pardon? All I know of Finland is that if the
Russians attack the Finns in the rear, Greece will help.
Sounds like you are "rearing" your expertise on that subject
again. Otherwise, elaborate.........

Now go sniveling an whining back to your Mama and tell her how that big, Billy-Bad-Ass is picking on you again. Nuzzle up to her and get real comfy......whimper for a hanky into which you can blow your nose. And beg her to spray some Windex on that window in your belly so you can see out better.

Poor little unfortunate fellow.............

Start by going to your county government officials and the local newspapers
and pointing how they are wasting your tax money on a system which is a
hazard to you and the public-safety people who will use it.

Also point out the political hazards of secret police.

>Jeff Moye G7TAT

Good Thought Jeff, BUT!

How many burglars have been caught while in the act?
Of those caught, how many had even a simple scanner with them?
How many burglars got hurt while on private premises and sued their
victims and got more than they could ever steal?
Of those couple that were caught, did they EVER have to make
restitution to the people they stole from?

Anything that can be encrypted can be decoded without much effort!
Ask any satellite TV buff, even the newer constant changing encryption
methods are readily broken.

Even if the police changed their encryption code every day at a
particular time, professional burglars, if they bothered with scanners
in the first place, would have the new code possibly before the

oncoming officers knew it.

The only way to curb crime is to make it non-profitable for the crooks and impose very steep penalties. In our present system, the only people who suffer are the victims, most criminals get off scot free with a pat on the back by the crooked politicians who are also benefitting from the proliferation of crime.

Your girlfriend screams rape and you get 15 to life.
You murder someone and you get out in 3 months for good behavior if you serve any time at all.

Cops only know two things, how to eat donuts and watch their radar guns. Unless the burglar is speeding away from the scene, the chances of getting caught by a sleeping radar cop is so close to nil that business is booming.

Politicians keep passing law on top of law without ever seeing the first law was ever enforced, if it was, the new laws on top of the old would not mean didly squat, which they don't anyhow!

Just out of curiosity, I checked City Hall on a few particular gun laws in our area. Some of those laws were generically;
You cannot discharge a weapon within the city limits.
You cannot carry a concealed weapon without a permit.
You cannot flourish a deadly weapon, definition includes many devices.
Armed Robbery, Assault and Murder are also illegal.

Now, checking the charges made against a person who commited a homicide during a robbery within the township.
Was he charged with discharging a weapon in the city limits? NO
Was he charged with carrying a concealed weapon to the site where the homicide was commited? NO
He held a couple customers at bay including the store attendant. Was he charged with flourishing a deadly weapon? NO
He was in the process of a holdup! Was he charged with Armed Robbery? NO Because the charge of MURDER was the only charge made against the person!

What did the family who lost their father get? They lost their house, car and dignity and are now living in poverty! What did the crook get? A good attorney paid for by our taxes that got him off with the minimum charge of excessive muffler noise and a slap on the wrist.

Now the politicians want to take away guns from the honest people to resell to the criminals under the counter of course, and pocket the money.

Did prohibition increase the states revenues or did it increase the criminals revenues and crooked cops bank accounts?
Did it slow down the flow of liquor even in the slightest, or did it allow more of our taxes to go to benny's brother who needed a job, so they made him a revenuer.

Did prohibition increase or decrease crime, especially in Chicago!

The laws generated by our corrupt politicians fill uncounted volume after volume, make lawyers richer and victims suffer more and more. Who are the laws written to protect? The criminals!
In this country Criminals have more rights than victims and the politicians are 100% behind maintaining criminals rights and their jobs, which are supported by crime.

Don't you think it's time for a change?
Don't you think the public has a right to know just how much goofing off the cops do in a single day?
Encryption of their communications is only so that the general public does not learn of their crooked ways so fast, it has nothing at all to do with criminal activity, which is promoted in every community to keep the politicians in office.

They calculate the "ground speed" of the airplane. Airspeed, "true"
or "indicated", is of little use to an aircrew clocking cars (except
airspeed is required to keep the plane flying- I guess that's useful).

The following recorded message was received from Mir on Christmas Eve:

"Hello you people on Earth, this is not Santa Claus yet, this is the Russian space station Mir calling - crew 20.

As you all on Earth, we are celebrating Christmas Eve today here in Earth orbit, and we wish you all a Merry Christmas and a peaceful and happy new year, and I will hand you over now to Yuri who will also direct some words to you:

------------------Message in Russian------------------

All the best to you once again, Merry Christmas, Frolische Weihnachten, 73 and bye-bye."

This message was recorded by German cosmonaut Thomas Reiter and was heard every four minutes during passes over my QTH (near Toronto, Canada) on 145.800 MHz using a Pro-51 with a roof-mounted quarter-wave ground plane antenna.

I had a friend visit from Hamburg a few weeks ago and was fascinated with my handheld scanner, particullary with what is in the 800 mhz band (over here, anyway). I posted a message to a few newgroups concerning German frequency allocations and got a response from someone somewhere in Germany of a book by Franzis Verlag: "Frequenzliste 30kHz-10GHz" and a place in German to purchase scanners, and I personally found a www site that lists a few German "frequenzes", but none for Frankfort specifically. I do remember that most of their aircraft allocations are in the same range as ours, around 110?-135 mhz, so there's a good start. Since this information is available, I would be lead to believe that it's now legal, but I admit I can't say for sure. I'll be going there myself this summer and was considering taking my scanner, even though I don't know a lick of German. But please keep my e-mail address handy and let me know of any interesting ranges to scan.

I use Scanstar Commercial & Scanstar Pro. It has all the provisions for ctcss and dcs scanning. One feature I find useful is the ability to specify a pl tone when doing a search and store. For example certain federal agencies use one pl on a nationwide basis. All you have to do is enter that tone in your search and store parameters and over a period of time you will find all that agencies active freqs.

Subject: Breaker-Breaker from Andy Peckerwood!!

>> Same to ya, Nocturnal Emission. That's a real nice handle
>> you picked for yourself. Probably best fits your most intimate experiences.........

> Good comeback - but(t) your adolescnet humor is pretty much wasted on me.

Humor? There's no humor there. Sick truth is all. In any
case, there's nothing wasted on you. You are just a sniveling,
whining little mama's boy....trying to ride other people's waves.

Mama's boy? Oh yes, you didn't think I knew you STILL live in
with Mommy, huh? Heh heh heh.....THAT ain't all I know, Andy m'boy.

>>> Well, after your PLL gaffe(s)

>> You are free to think whatever you like.

> Awesome, you didn't deny it! Of course not, because I'm right and you
> were wrong all along. Once again, I pick apart your technical statements
> and you come back with personal insults. Cheek, why don't you stick
> with facts?

Deny what? What is a "PLL gaffe(s)"? You haven't picked apart
anything.

Facts? You want facts? How about that fiasco ham repeater you
used to run? How about your cute little call letters, VE3 SNM
ha ha ha ha ha ha ha ha ha ha!

Into a little S & M are we? heh heh heh heh heh...... How about
your police record? Should we get into that any time real soon?
Never forget that police records are PUBLIC records, Andy m'son.

Oh....and there where you work at Sinclair Labs....as a low level
shipping clerk, broom pusher, boy-Friday, and general Gofer, well
we can get into a LOT of truth and facts.......as you please.

>> I thought you might wimp out. You always have. You always will.
>> You don't have a hair in your sweet patooty to get up and make
>> your words count. But then, Andy m'boy, you never could count.
>> And you don't count.

> Well, I have no idea of what you are fishing for here so I'll just ignore it.
```

Naturally. Ignore anything you don't want to face. You've done a slimeball job of attacking me to others.....but when I am here to confront and deal with you direct.....you slither off claiming ignorance. Why don't you just deal with ME up front and challenge me...live and direct in the forums.....instead of sniveling to others on the sly?

I don't read most of your trash and offal unless addressed directly to me.....so if you wish to score....here I am....address me in the newsgroups on whatever technical or witty issues that meet your heart's fondest desire. But deal with me direct....not to your sweet ol' goodbuddies.....

> Well, I don't look down upon people who push brooms or pick up garbage or
> whatever. Quite frankly, I don't feel superior by considering others' to be
> inferior. It's not my style.

It seems to be your style exactly. So do it direct, though. I am on the newsgroups now.....waiting for you, bigger than Life. Let's deal there; you started it there. Let's END it there?

Eh?

> When I'm away from my computer & modem I don't even
> think of you - or anyone on here. My cyber-world does not meet my real
> world unless I choose it to. Clearly by what I have written on the
> Internet & Fido in the past you (and everyone) knows pretty much NOTHING
> about me.

Then be happy with that utterly profound truth!!!! If that is so true, there is no need to defend it, now is there? On the other hand, if things about you are known, then you may do well to run for cover, Sphincter-Lips!

> Well, it would appear you are not one to leave me alone.

Noooooooooo, Andy m'boy, you started it. You kept it going. And you have no visible intention of dropping it. So, my hat's now thrown into the ring, and we're going to deal, one way or another, on whatever level you see fit.

> The only thing I can think of why you wrote this is because you plan
> on making an outtake and using it to try and make *me* look like the
> bad-ass in the future.

Noooooo, Andi, m'son.....I left you the hell alone for a year. You got on the newsgroups and cut loose with an unending series of innuendo, diatribes, lies, slander, libel, defamation, and other cutthroat tactics. I left you the hell alone as you cut loose with one after another....

But now I am here. Now I am not going to go away. Enough is enough, and you've had your turn. Now it's my turn.....and we will be turning up the heat, my fine sallow friend......

>> Cool. Hurry! Quick! For two reasons:

>> 1) I can't wait!
>> 2) I'm moving in February and you'll get lost finding the new place.

> Ah! I must confess I was not aware of that. Be a sport and send that
> new address along. I wouldn't want to get lost in a *bad* part of town.
> Well, that is assuming you aren't moving to a *bad* part of town!

You had it right the first time....I *AM* moving to a very *bad*
part of town. You will be warmly welcomed.....

> I would still like to talk about the "11m Times & Journal" and the
> FCC. You seem kinda quiet about that stuff. Do tell us why!

Who is "us"? I have never been quiet about the Eleven Meter Times
& Journal. No secrets there, Andi m'boy. What would YOU like to
know about it? And speak for yourself.....what's this "us" shit?

>> Now go sniveling an whining back to your Mama and tell her
>> how that big, Billy-Bad-Ass is picking on you again. Nuzzle
>> up to her and get real comfy......whimper for a hanky into
>> which you can blow your nose. And beg her to spray some
>> Windex on that window in your belly so you can see out better.

> Man, you are heading way down the wrong track about me.

Am I now? Am I really...? You *DO still* live with mommy dearest.
And you *DO* have certain little personal problems that we've not
discussed just yet........ You seem so adept at bringing up other
people's business, perceived or real....so we will begin to deal with
your business for a while.

Does anyone know of a place to get a Radio Shack Pro-43 and Pro-34 mod to restore cellular? Is it still legal to do so? I live in Georgia and would like the name of company nearby. Also, what should I expect to pay?

>is should be much. much longer than than standard alkilines.

Why do you say that?

The pack is only rated 600 mAH ... and you can buy individual nicad AA cells
for the battery holder, right at the same store, rated 850 mAH.

Yo speaking of the 800 MHz system in PDX, its seems pretty messed... Often the police comm shows up on dedicated cell freqs. What I want to know is how do they negotiate this with US WEST/CELLULAR ONE cell ops? I mean sometimes I'll hear a police comm and then after the trunked system switches channels a cell phone pops up on the original channel. Wouldn't this cause a lot of interference or is it all controlled by computer? Also can some one post all the PDX police freqs in the 800 MHz trunked system, I lost the ones I had.

4377. Trans World Dome frequency

Newsgroup: rec.radio.scanner
Date: 1995-12-27 00:00:00 UTC
From: mmt1@ritz.cec.wustl.edu
Message-ID: <4bshor$h4h@ritz.cec.wustl.edu>
Source record: 243968
Cross-posted to: rec.radio.scanner,stl.general

Last Sunday (12/24), at the Trans World Dome in St. Louis (site of the Rams-Dolphins NFL game), I discovered that 457.5875 MHz was the frequency on which the "JumboTron director" was operating. That game was the first Rams home game in which the network (Fox or NBC) feed was not the primary source for game action. Evidently, the Rams A/V people took control of all the JumboTron action for the first time on 12/24. Previous scans at the TWD failed to turn up anything at 457.5875 MHz (although I was in different seats for those previous games, so that could be a mitigating factor).

: Why does the control channel "need" to change, ever, much less every
: day? I've wondered that more than once. Anyone out here have an
: answer?

The data channel is on continuously, by changing frequency all the data channel transmitters share the load over the years of service. In case of failure the system can recover by moving the data channel at any time.

> : >those areas: Boycott support of those local agencies.

ERM.. Sorry Keith, I'm having a problem understanding you. Maybe it;s cos I'm English or something! Here is the problem as I see it...

Imagine the situation... Theives break in to a dept on an industrial estate at about 02:00. They are equiped with (amongst other things) crow-bar, electric drill, scanner they picked up from Tandy (Radio Shack) for 100. They smash a couple of doors, and try to drill the door to the safe. Unfortunately for them, one of them wanders into the next room, which happens to be the first door with an alarm. Of course, the bells don't start ringing straight away, instead a central control room is informed and a message is relayed to the local police station. The local police call up on the radio for a unit to attend this address because the alarm has gone off.

Now, up until this point, the theives are unaware that they have set the alarm off. As soon as they hear the radio they get their stuff together, jump in the van and drive off and manage to escape about a minute before the first police unit arrives.

Think about what would of happened if the radio's were encrypted.. They would not of had any warning that the ploice were comming and there is a fair chance that the would have been caught in the act.

With this in mind, what possible argument can you put up to suggest the police should NOT use encrypted radios?

I notice that you DO allow their use for anti-terrorist or anti-drugs operations. If these criminals use scanners, what makes you think that other criminals don't?

IMHO if there is a technology avaliable to the police which helps in the fight against crime, then they should damn well use it. So what if it means that the ordinary Joe Bloggs or John Doe can't listen in on what's happening?

That's counterproductive, and as others have said, bucks progress.

Instead, you should push for assurance of non-real time access to recorded traffic by recognized news agencies and for laws preventing destruction of these tapes. If strong enough, these laws should help contain abuse to hopefully acceptable levels.

OK, here is the scoop...

I just got my CE232 interface, and while the board looks easy enough, I have no tools or desire to cut the db25 connector hole in the back of the unit. I am sending it all to the linkall guys, and while it is there, I am getting the 25,600 memory unit installed..

For those of you that are looking for the schematic/instructions for the 25600 mod, I would suggest getting in touch with Mark Persson, the guy that builds them.. He can be contacted via SASE at:

1369 Lombardy Blvd
Bay Shore, NY. 11706...

BTW: His number IS in the book, so, while I wont post it here, I have been lucky enough to talk to him directly on a couple of occasions... Linkall with the dual speed auto switching oscil. crystal and keypad/computer control is the only way to go...

Now,come on, as a radio amateur, did you not read and recite any of thelaws reguarding reciprical(sp?) agreements between different countries? I am not sure about the legalities anymore, as it has been a few years since I took a talkie to Canada, but, the will NOT confiscate it. They may require you to leave it at the border, or have it shipped back home, but they don't usually just keep things...

As for the thread, radar detectors are illegal in most of the places I have traveled in Canada... I was even stopped once on Prince Edward Island and asked if my cell phone was a radar detector... Whew, it was in the glove box!

Scanners are not illegal, and , I doubt if they will ever be totally banned. I doubt they will even have most of the shitty restrictions we suffer from in the states....

4398. Scanning "Digital" Communications ?

Newsgroup: rec.radio.scanner
Date: 1995-12-27 00:00:00 UTC
From: jmason@iu.net
Message-ID: <4bqidq$aa9@cc.iu.net>
Source record: 244018

My county has decided to switch to an 800Mhz repeater-based system for all govt and police operations in about two years. This is supposed to be a "digital" system. What does this mean, relative to scanning ? Is the audio digitialized like on a CD, or do they just mean that there will be buried digital info which helps direct the radio traffic ??? The system contract is with Motorola.

In a related vein - the police have discussed using voice scrambling on at least some of their channels, apparently Motorola offers this as a standard option. Any ideas on how to defeat this ?

Me too!
I own a PRO-51. I work for Radio Shack (no comments please it sucks as
bad as you've heard). I like my Pro-51 but have not heard of a cell mod
that works. The older PRO-51's (mid '95 and older) There is a keypad
code for opening the cell bands but it doesn't work on the new models
like mine :-(The code is to hold down band, 2, and 9, while turning
on the scanner then the LCD screen will scroll all the lights. Wait
until it scrolls once and then press L/O, 2,and 9. If your not sure
wich scanner you have look on the bottom of the box. If there is an
orange dot on the box, you have a corrected model and cannot use the
keypad code. I have not yet heard of a mod for the corrected model yet.
SUCKS but that's the SHACK.
Later
Anyone with a mod for the new model PLEEASE!! post or E-mail me!!!!

In article <4bns2c$86v@antares.en.com>, gbg@en.com (gbg@en.com) wrote:
#When I scan the local police channels, my scanner will stop on a channel
#that is broadcasting continuous noise. I will then have to lock out that
#channel in order to continue scanning.
#
#The next time that I scan the police band, it will be a different channel
#that I have to lock out for the same reason. Are the police attempting to
#prevent the public from scanning their frequencies?
#
One question: Are you scanning the 800 MHz frequencies of a trunked system?
If so, the continous "noise" you hear is the "handshake" channel. Most
systems alternate that channel to one of several and it changes from time to
time.

FG>If anyone has had this problem and or have taken apart the AR8000 I
FG>would appreciate your experiences, how you openned the case and how
FG>the BNC is tightenned. I located the 2 screws in the battery
FG>compartment but am not sure what else to remove.

FG>Thanks,

FG>Frank.

This happens to most well used HTs, scanners, etc. [Standard HTs have an extra screw in their BNC mount to avoid this problem.] I fixed my AR8K for the same problem too long ago to give you specific hints, but here goes.

The screws in the battery compartment are the first step. You need to remove the screws in the 'rubber' side strips. Only remove the two screws on the same "half" of the scanner where the battery compartment is. You can remove all 4 screws where the rubber strips are, but this tends to be more work. You may have to remove an internal PC board to get to the BNC. [I've played with the radio quite a bit and can't remember how much was needed to do a specific task.] Once you get to the BNC, I would advise loosening it a bit more, then applying LOCKTITE before tightening the nut again. I have done this on my HT and scanner and wish they would leave the factory with LOCKTITE!

When opening up the AR8K, be careful with the battery clips. They can fall out of the case. The clips connect to a socket inside the radio and are loose when the radio is apart.

Source record: 244027

If your PD has purchased a Motorola ASTRO system, you are pretty much out of luck. I personally saw a DEMO on a digital trunk system (Ericcson's EDACS) in the Analog mode and the AEGIS "Digital Mode". The scanner could hear the analog while the Digital mode was just noise but clear on the portable radio.

If you PD has purchased a SmartNet II system, it is possible to run both clear and encrypted. Only in encrypted you cannot monitor.

Hope this answers your questions.

73's and happy holidays.

I have never heard anything about the mere possession of a scanner to
be illegal but do know that Kentucky exempted hams from the scanner
law a couple of years back. If I recall correctly we were the 49th
state to do so. It was between us and New Jersey to be last I
believe.

I do know a few hams that have been hasseled about their radio gear
but none of the ones I know have ever had any gear confiscated. I
have never even had anything said about any of the radios in my car.
I've had the occasional questions about what it is and how it works
but that's been the extent of it for me.

>>Santa was GREAT to me this year. I found a discone scanner antenna in my
>>stocking (the Rat Shack one).
What cable should I use to
>>connect this antenna to my scanner?

>well jason i work at radio shack and we sell 50 ft and 100ft of RG59

RG 59, 58, and cheap forms of coax (Radio Shack branded cable especially)
exhibit HUGE losses at VHF and UHF frequencies. Check out
a Belden spec sheet on their coaxes, and you will discover that RG58 and
59 should not be used for VHF / UHF runs longer than 15 feet or so. Check out
the shield coverage of a piece of Rad Shack coax, and compare to a decent piece
of Belden. You'll notice that the shield coverage of the cheaper coax is very
light..

Spend the bucks and buy some Belden RG213, or RG8U cable, and correctly
install the connectors. You will notice the difference.

MHO

It's like QRM on ham bands -- You always ignore the malicious jerk. If you say something, it only adds fuel to the fire.

>Otherwise, if no one else will deal with him, then I will. So do you
>have any good suggestions for how to get him to cease and desist?

I have an suggestion -- Ignore him. Put him in your kill file. If he wants to be an asshole (not saying he is), don't be one yourself. Frankly, this nonsense going back and forth between the two of you has nothing to do with scanning, so please take it elsewhere.

Thanks.

Merry XMAS to you to, Ed! :> Thanks for your reply...

Is this the Canadian radio license database? I guess it would have to be
to total over 100 megs. This sounds like a good candidate for a CDROM.
I don't suppose anybody in the newsgroup knows if somebody offeres this
on CD, would they?

I was actually just looking for a band plan table, but to get something
like this would be great too.

Bill has been trying to ignore this jerk for quite some time now but to no avail. Moss seems to have some kind of hard-on for him and exhibits all the signs of a clinical psychopath in his unending personal attacks here in this forum (and others I think). If you are new to this group and haven't been listening to the bullshit that Andy Moss has been spouting for quite awhile then maybe you oughta just lay back for awhile and check out both sides of the story. Personally, I'm hoping that Moss will just go 'critical mass' and be commited or something and we won't have to listen to him anymore.

What is the story with Uniden's Bearcat 890XLT scanner. It seemed like
a good idea at the time, but frankly it's performance is lousy.
Side-by-side with my old 210XLT, the 210 pulls in more, better, faster.

Is the 890XLT known as the Edsel of scanners. The antenna fits poorly.
Uniden has been unresponsive and when I mentioned it to Amateur Radio
where I bought it, I got little more than a smirk and no answer.

Is it a lemon, or did I just get a lousy model?

Ok, I listen to my local police, fire, amb. trunk system, and it's exactly what you described with the data channel that changes every 24 hours. That I understand. But theres one thing that I haven't figured out... once in a while there's a series of what sounds like data bursts in a cycle like on-off-on-off-on-off... not a regular rate, but almost as if someone is doing it manually. Sometimes i'll hear squak-squak-squak each about a half second long, and about a half second between each. I thought it might be just what you described above, but I didn't think they had the capability to send coded messages for one, and if they did, I would expect the messages to be a constant data noise, not bursts.

Anyway, you seemed fairly knowledgable on the subject, so I figured I'd throw this one at you.

Thanks in advance

Roger,

I beg to differ with you on Mil air step sizes. Most Uhf aero radios use 25KHz spacing. Volk Field in Wisconsin uses 298.775 & 283.775 MHz in the 640 A/B MOA. They also along with most ATC use 50KHz spacing IE 319.650 Entry /Exit control. Though 25KHz spacing is somewhat rare it is in use and most of the radios are capable of those freqs. There is also alot of MILAIR comms in the 138-144MHz range using 25KHz spacing (AM Mode). On a recent trip to Springfield Illinois I confirmed the ANG out of Capitol airport testing Digitally encrypted Comms from their F16s' VHF AM. In the Midwest there is alot of VHF MILAIR traffic along with Uhf traffic. If you live in Illinois keep an ear on 350.350MHz (AM). If you can obtain a list of current ATC freqs for your area the Uhf freqs should also be listed. If you listen to those freqs they will usually say what freq they are going to. A good outside antenna is also important. Good luck....

Jeff Zeman

Use your scanner through your car stereo. If your not one of the
lucky ones to have an aux input, Use your speaker out or earphone out of
your scanner to feed your tape deck. try using a CD to Cassette adapter
with a stereo to mono jack. It works great with my BC2500 and the adapter
cost $19.95 at Radio Shack.

4446. 2 Channel Maxtrac to 16 Channel Maxtrac Conversion?????

Newsgroup: rec.radio.scanner
Date: 1995-12-28 00:00:00 UTC
From: scanner119@aol.com
Message-ID: <4bthor$s1d@newsbf02.news.aol.com>
Source record: 243894

I saw a posting on here the other day on converting a 2 channel Motorola Maxtrac(VHF High Band) to a 16 channel. I have access to both the software and hardware I need some technical advice on how to do it. I have
4 mobiles and 1 base station I use for my construction company and would like to convert them to 16 channel radios. I priced out new radios from a local guy and he wants $425 a pop for 16 channel ones(used, no less) and I spoke to a friend who says the hardware is only about $25 for each radio so I
figured this was the way to go. I really could use some help from you guys.
I'm really not a radio-guy, I'm a scanner-guy myself. Any help would be greatly appreciated. Thanx in advance.

A very remarkable story about Andy Moss
just came to my attention from a
gentleman in the Ontario area near Moss.

Seems that ol' Moss is very, very good
and skilled at what he does in his part
time job with the Great Lakes fishing fleets.
As I hear it, about a year ago, Moss hired
on a fishing boat for a weekend job with
the position of Apprentice Baiter.
Apparently, he was needed to tie
anchovies onto fishing hooks and to chum
the waters around the boats.

The story escalates to relate how Moss
became so good in his new position that
he was promoted within six months to the
respected position of Journeyman Baiter.
(Atta Boy, Andy!)

And now, just last week, the fine strapping
young lad, Moss, was advanced to the highly
exalted position of.... Master Baiter.

I understand he's now being trained for
collateral duties as Chief Pivot Man.
What a dude! Way to go, Andy Moss!
You're coming up in the world, old chop!

Huzzah! Tada! Bravissimo!

Sounds like a trunked system to me. If its not trunked, maybe they have
a mobile data terminal and rotate the channel so they do not "wear out"
the repeater transmitting the data.

Our local county is taking over dispatch for the entire county consisting of about 25 - 30 agencies. Part of it will be strictly digital, however as they are already switching it still has some analog that can be received. Does anyone know of any new receivers coming out that will handle this. My wife would still like to be able to listen to me at work. Any info would be appreciated.

> aircraft frequencies?

I would sugest 25KHz spacing although you can't choose this on the
PRO-2006 - you would need to use 12.5Khz so the time taken to search a
particlar part of the spectrum is increased.

As you are in the USA though you may be better using 50KHz steps as this
sees to be more the norm in the US although I'm sure you will find some
units using 25KHz spacing for Air/Air comms.

Here in the UK/Europe there are many 25KHz spaced channels.

Hmmmmm... I *was* going to just let this `thread' slide but...

One of the things that seems to be convienently overlooked by a lot of people here is the trend towards using trunked radio systems that also happen to have as one of their `selling points' dedicated `anti-scanner' features. These are *not* `encrypted' systems as such but they *are* being sold to municipalities as ways to `hide' from scannists. The use of `true?' encryption for `sensitive?' operations is a point that *most* scannists and other radio hobbiests really won't argue. It's this blatant and at times publicly announced reasoning that, "We're going to this new system to shut out the `average?' scanner listener." that has most of the radio hobby community in an uproar. In quite a few cases it is something more `political' rather than `technical' that has prompted the `upgrade?'.

Case in point:

Denver, CO a few years ago signed on with GE/Erikson to get a new 800MHz trunked system. Now... While it *can* be argued that the old system was getting a little `creaky in the joints' and that there was *some* congestion surrounding and among the existing channels the existing system could have been easily `brought up to snuff' for less than what the new system was bidded at and considerably less than what it has cost so far. Now... When the new system was finally annouced, after some *very* questionable political wrangling, the *very first* thing that was said about it was that it was done to keep *anyone* who *didn't* "meet the `qualifications?' of the city" (Translation: Your average

radio hobbiest and assorted media persons.) from listening to the system. It *wasn't* said that the `upgrade' was done because the old system was `no good' or was `becoming unusable or unstable'. That was only said much later on.

(A little `history' might be of some help here. A few years before this new system was instigated a local TV station had gotten some local politicians `butts in a sling' over how there was *quite a bit* of `feather bedding' in the Public Works Dept. by using ordinary scanners to track and follow various crews in various divisions. They *also* came up with some, though quite a few less, instances where the Public Safety Dept. was also engaged in similar practices. [The *majority* of the `scandal' was in Public Works. The Public Safety Dept., while not a paragon of decorum, was quite `clean?'!])

Now... This brings us up to the present. The Public Safety system, while being on a trunked and admittedly hard to follow system, is remarkably clean of all the ballyhooed `anti-scan' tech-no-golly. Granted... The basic system *is* by the nature of the `bastard' system GE/Erikson uses hard to scan with an `ordinary' scanner. And... If you are able to come up with the $ to buy a radio that can be programmed to follow the talk-groups you are limited to those that the politicians and assorted `officials' have told the boys down at the transmitter are programable. But... It *is* `somewhat?' open. The *sad* and *deploreable* thing is that the Public Works (The street repair crews, the custodians, the peons, ETC..) is both completely `loaded' with `anti-scan' tech-no-golly *and* not allowed to be programmed into any `private party' radios!

I could go on about how the system has been so unstable, how the equipment has failed to work in the field, how the different divisions in Public Safety have had problems communicating between themselves, and many other problems this Beta system has had. But... For the purposes of this thread I don't think I need to. What counts here is that in some cases the new tech-no-golly has been used *not* to replace aging systems but to shut out the very people that are being asked to pay for it and to eliminate another possiblity of being called to task for some *possible* questionable practices that might otherwise be discovered. While I don't think that a `boycott' is exactly the correct term to use I *do* think that it should be made clear that this `trend?' towards making radio communications, among other forms of communications, less accessible is only hurting an already strained relationship between the `government?' and the `people'. If anything, it should be pointed out that an informed populace is more likely to `go along' and help when their help is needed rather than being coerced into helping without any knowledge or explanations given.

Doleo ergo sum,
-HALFPINT-

Bill, I have sent Moss personal e-mail as well as posted messages in this forum, telling him that his supposedly useful observations were nothing more than thinly veiled attacks upon you. The last exchange between resulted in his filtering my email messages so that he didn't have to hear from me any more.

I'm no supporter of yours and if Moss wants to call you a glue-sniffing, T-bird swillin' cheat, I could care one whit. What I do care about is this constant bickering, which does nothing more than clutter up the newsgroup with things that are not even remotely worthwhile reading. Yeah, yeah, yeah, I have the option of not reading yours (and his) posts, but I don't like the idea that I have to avoid certain messages based on who wrote them rather than what the message might say, which I cannot discern in advance. Heck, who knows, one of you might surprise me and actually say something relevant! I also freely admit that you are both apparently more knowledgeable than me on this subject and I'm eager to learn.

You want the guy to stop? Then stop rising to the bait. As long as he keeps snaring you with the same lure, he's going to keep doing it. That, it my estimation, makes you look as foolish as he. For my part, each and every time that Moss decides to wallow down in the dirt with his idiotic ramblings, I'll point it out to him that they are unwanted here. I'm sure everyone else will do the same.

A Lemon !
I dumped my 890 3 weeks after I got it.
Side by side comparisons with my PRO-2004 and 2006 proved the
890 to be all-show-no-go.
I really liked the slick look but functionally, the VFO knob
was the only decent thing about it.
Sensitivity and selectivity SUCKED.
Technically, the quality of the pc board could be likened to
that of a cheap telephone, with crappy phenolic snap-off
sub boards that were ladened with uncleaned flux from the
wave soldering process.

2 thumbs down for the 890XLT !

Organization: America Online, Inc. (1-800-827-6364)
Message-Id: <4bthom$s18@newsbf02.news.aol.com>

I saw a posting on here the other day on converting a 2 channel Motorola Maxtrac(VHF High Band) to a 16 channel. I have access to both the software and hardware I need some technical advice on how to do it. I have
4 mobiles and 1 base station I use for my construction company and would like to convert them to 16 channel radios. I priced out new radios from a local guy and he wants $425 a pop for 16 channel ones(used, no less) and I spoke to a friend who says the hardware is only about $25 for each radio so I
figured this was the way to go. I really could use some help from you guys.
I'm really not a radio-guy, I'm a scanner-guy myself. Any help would be greatly appreciated. Thanx in advance.

Why BUY additional software??? Why not take the software written for the interface and use it.. OOPS, Sorrrry, I forget, the Opto unit comes with little/no software... However, the CE232 comes complete with software and it is DOS, not stupid old windows! Why should I be forced to bring up windows just to play with the scanner??? Also, CE232 folks (Bill Cheek) will supply you with the CE232 developers kit if you are so inclined and wish to write your own stuff....

And, the CE232 when installed externally will allow for multiple scanners to be controlled from the same unit...

Just got mine for Xmas, and am installing it while I read the news...

A few days back there was a posting for info on Richmond Hts. Ohio police. The Hillcrest area police (and Fire Depts) including Richmond Hts., Mayfield, Lyndhurst, Gates Mills, Mayfield Village...Share frequencies in the 420-430 mhz band. The repeater outputs are on the low side (422-425).

The University Hts. PD, Garfield Hts. PD and fire, Bedford Pd and fire, Solon Pd and the Chagrin Valley PD are other departments which have also moved to this band which is only authorized in Detroit, Cleveland and Buffalo due to the lack of other available frequencies due to the proximity to Canada and being North of line"A" (50 miles from the border). I dont have the frequency list with me right now but you can E-mail me for further information.

: never a problem..may be a problem if you travel abroad though. JOHN

Having just gone to San Diego and back on two different airlines (United and TWA), both airlines made announcements that devices that transmit or receive signals are not allowed at any time. They specified AM/FM radios, I think one of them mentioned two-way radio, but neither mentioned scanners specifically. But since a scanner operates by receiving signals, it would fall under that restriction.

Then again, after lurking here for a while, it seems to me that a large portion of scanner enthusiasts have the opinion of "as long as they don't catch me, it's okay, besides, if they didn't want me listening, they should keep their airwaves off my property." I'm not saying ALL, by any means, but there seem to be a awful lot of them...

Just an observation from the other side of the fence.

Here you go... Portland/Vancouver

PORTLAND/VANCOUVER 800MHz SYSTEM

*Includes fire, police, etc

856.4625 Portland/Vancouver Trunked System
856.7375 " "
857.4375 " "
857.4625 " "
857.2625 " "
857.7375 " "
858.2625 " "
859.7125 " "
860.2625 " "
860.4375 " "
860.4625 " "
860.7125 " "
856.2625 Portland/Vancouver Trunked System
858.4375 " "
858.4625 " "
858.7125 " "
858.7375 " "
859.2625 " "
859.4375 " "
856.4625 " "
851.2875 Portland/Vancouver Trunked
852.3875 " "
853.4375 " "
854.5875 " "
854.3125 Portland/Vancouver

.. In case you want Washington County 800MHz trunk crap...

WASHINGTON COUNTY 800MHz

855.2375 Washington Co. Trunked
856.2375 Washington Co. Trunked
857.2375 Washington Co. Trunked
858.2375 Washington Co. Trunked
859.2375 Washington Co. Trunked
860.2375 Washington Co. Trunked
859.7375 Washington Co. Trunked
860.7375 Washington Co. Trunked
855.9625 Washington Co. Trunked
854.9875 Washington Co. Trunked

One of these channels is a control channel, and rotates daily. Users
of the system include Washington County Sheriff's department, Hillsboro,
PD,
Beaverton PD, Tigard PD, and the fire departments.

855.7375 Washington Co. Trunked

This frequency was apparently established for reaching holes in the
coverage out
in west county, namely Buxton. WCSD's F1 is transmitting on this
repeater--and
it isn't in the trunk pool, so if you want to monitor WCSD without the
hassles
of trunking, this is the frequency to listen to. Note, however, that the
transmission quality stinks at best...

Thankyou Brian Varine for the Info!!!

Maybe the police need to be reminded who they serve. The people
who pay their salaries have the right to know what the police
are up to. Also many people help the police by calling in
information about things they hear over their scanners if
thgese communications aren't available the police would be
missing out on an invaluable resource.

I see no reason their daily communications should be encrypted.
Surveillance and other operations have valid reasons for being
encrypted, not daily police calls.

I have read that a 3/8" internally threaded coupling can be used. I
found them at the local large chain hardware/building supply store.
This will mate the threaded stub on the discone to many moble type CB
antennas. Si B.

>>With the increasing use of digitial encryption by the Police, Fire
>>and other public agencies. There is only one answer for citizens of
>>those areas: Boycott support of those local agencies.

>That's counterproductive, and as others have said, bucks progress.

>Instead, you should push for assurance of non-real time access to recorded
>traffic by recognized news agencies and for laws preventing destruction of
>these tapes. If strong enough, these laws should help contain abuse to
>hopefully acceptable levels.

If existing laws have failed to stop police corruption, why should new ones fair any better? Just like many other professional groups, the police have shown time after time that they are incapapable of policing themselves in any consistent long-term manner. The best check we have on our government is an open review by those they have sworn to protect and serve.

And I don't listen to any cell freqs that don't pass through my house without
my permission! ;^)

Brian P. Mann, kb8rsc bpmann@sojourn.com

A popular misconception is that failing to understand is the fault of the
person being offered the knowledge, when in truth it is the fault of the
person offering it.

I've used this scanner for some time now and i'm very happy with it.
It is easy to use and it looks good. This model has 50 channels
divided in 5 groups of 10 channals and it also includes the 900 MHz
band (Atleast the european version does). Sensitivity is very good.
It has two scanning speeds so it can also pick up stations that are a
bit further away. Apart from this it has the standard Bearcat features
like weather band search, possibility to search between two frequency
limits and the priority function.
In my opinion it's a very good model.

It used to be. Receiver such as the Icom IC-R7100 or even IC-R9000 could
only be sold in Germany (West) with essentially Amateur frequencies on
(HF,VHF,UHF) but the situation has changed and no such regulations exist
any more so you will (or should) have no problems - take it with you.

Source record: 243981

Hi Alex,

> Could any kind soul give me some hints about reset this device.

There is no "easy" reset on the AR2000. You need to do a "hard" reste to the CPU. This will clear all memory channels and also set the 10 search banks to Japanese Factory defaults.

It is neccesary to dissasemble your radio and connect a jumper wire and then by using the keypad rest the CPU. The instructions are on our WWW site (www.demon.co.uk/javiation/cpu1.html if you want to go straight to the file) and follow the AR2000 keypad reset not the AR1000.

If you don't have WWW access I'll mail you a .txt copy of the file if you wish.

All the best

: > Volunteer Police and fireman can join in.

OK, this is lame. Just becuase you can't listen to your precious little
scanner, you're going to turn your back on the rest of the citizens of
your community? Good idea, when there is an emergency, why not just deny
the city the help they need with hams. Egad! City: Help, we just had a
major earthquake, our radio system is down, there are hundreds of people
that are injured and need help, will you help us with your ham radios?
Ham Club: Nope, becuase you're cops are encrypted! (And for those who
think that a disaster like that can't happen, well it can, and
has. I lived through it, Northridge 1994)

And yes, I would like the police to reamin in the clear, and firing off
letters are vocalizing your concerns are a good idea, but boycotting or
refusing to help in a time of need is stupid. And let me guess, you're
going to be the first on to bitch when you're up the creek and you need help.

Todd,

Thanks for the info. I noticed that you're a ham, and also that you live in Gainesville. I lived in Ocala for a couple of years and worked at a couple of radio stations there.

Where do you hang out on 2-meters? I was just down there to visit earlier this month; heard lots of activity on 146.820 (as usual) To my surprise, 146.910 was fairly quiet. Also noticed that they've got a new repeater (146.970) up on WOGK's tower to replace the 145.130 that was taken down a few years ago. (Man, that machine had good coverage!)

I miss it down there! (Even though Alachua county has the highest gas prices in the South!)

This is really an apple to orange comparison and about as valid. The Opto controls the scanner, decodes tones and does other tricks; the CE232 is basically an autoprogrammer.In any case, all of that is irrelevant. The gentlemen asked about scanner software, not the differences between these two devices...

I use Scancat Gold for my AOR8000 and I've been completely satisfied with its perfromance. What I don't like about it is that the menus and other aspects of the user interface are not particularly logical. If you want specifics, I'll provide them off-line... The manual is deporable. Price is $95, which what the others go for.

My advice? Lots of demo programs around. Try them and see which one suits your need.

>
> Why BUY additional software??? Why not take the software written for the
> interface and use it.. OOPS, Sorrrry, I forget, the Opto unit comes with
> little/no software...

Actually, it comes with demo software and nothing else.

However, the CE232 comes complete with software and it
> is DOS, not stupid old windows! Why should I be forced to bring up windows

Price is now $450.00 US plus shipping.

The MVT 8000 is 200 channel ac/dc scanner with a
mounting bracket for mobile use and comes with a cigarette lighter adapter
although it can be hard wired.
It covers 8 Mhz to 1300 Mhz (continuous without blockage) and receives in
WFM, NFM and AM. Frequency steps are 5,10,12.5,50 and 100 Khz.

It's got a 10 band search function, pass memory function, and other goodies
found in high-end scanners.

Program the ferquency you wish to use as Priority into channel 1000 as
you would any other channel. Rtaher than confirming the channel number
briefly it will say "P"

eg. To put 123.85MHz as Priority

123.75 ENT 1000 FUNC MW

>if I did not produce the license.

At the least you would have lost your scanner. Kentucky does have
very strict scanner laws. I wasn't trying to say otherwise. I was
only saying that hams are exempt. I was even told by a Louisville
police officer that he was not allowed to carry a scanner without a
permit, only issued police radio gear. I never checked on that so
take it for what it's worth.

I personally have never been asked to show a license. But I rarely
have my scanner with me, just ham gear that will scan police
frequencies. It may have made a difference that you had a regular
scanner.

My comment on not knowing about mere possession of a scanner was in
reference to having one boxed up and not in an easily usable location.
If it is where you can use it and you are not a ham they will take it.

I think that Kentucky scanner laws are too restrictive but there
doesn't appear to be much that can be done about it. I keep a copy of
my license with me all the time anyway so I just go on and don't worry
about.

73,
Steve KA4IQD

I have no idea what the current US software version is I'm afraid.
I can't see a reason for any major changes if any. You could try calling
Tandy National Parts/Repair centre though to see if they know or try
calling in at your local RS and try the same key presses on a current
stock/display one with a later date code than yours if they have any.

All the best

> receiving signals, it would fall under that restriction.....................

On a recent trip from Chicago to Arizona I asked the Stewardess if it was
OK to use my 200XLT. She said She would have to check with the Captain
and took the radio to show him. She came back and said it would be ok and
gave me a note from the pilot with all the ATC freqs that they would be
using.

So I suppose it's best to just ask...

No there is nothing to can do to restore the Cell phone segment directly
to the newer pro-2026. Great scanner though. If you really want cell phone
then it is best to try to find an older used unit, or a antenna mounted
mixer like those sold be ramsey.

Ken,

I couldn't agree with you more!

What is -most- frightening about all of this is the absolute lack of objectivity by -some- of the licensed hams - people who should know better!

While I cannot speak for Law Enforcement specifically, I can say that in MANY parts of this country, the shift to digital technology by Public Safety agencies has nothing to do with "encryption".

With an ever increasing number of users and a finite spectrum, agencies, especially those in crowded urban areas, are responding to the likelihood of a future -mandate- to narrow the the frequency space between users. Such a mandate will all but preclude the use of analog technology. In many cases, going digital now is in the best interest of the community and the taxpayer.

I speculate that "Keith" was just venting. I do imagine that he, like so many other dedicated Radio Amateurs, will rise to the occasion when

needed.

JO>From: jobes@tigger.jvnc.net (BJ)
JO>Does anyone know how to access the data 'sent to the printer' in police
JO>cars by Bucks County, PA police radio?

I can't tell you anything about Bucks County but in Minnesota the MDT's
(Mobile Data Terminals) are DES encrypted so you can't decode the data
without the encryption key. I'm told the data is encrypted because it
usually includes PRIVATE rather than public information about
individuals and data privacy laws require the extra steps.
I don't expect you'll have much luck copying it.

I haven't asked many questions but I understand the system uses
something similar to packet radio message handshaking. In our area
the MDT's run on 800 MHz although I assume it could be used on any band.

Message-ID: <4bvgdd$hh@cville-srv.wam.umd.edu>
Source record: 243856
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just bought a Radio Shack PRO-2026 scanner. I tried to modify it, but when I opened it up I found that the jumper that I am supposed to cut to restore cellular frequencies is not used in my scanner - apparently, it is one of the newer 2026 scanners. Is there another way to restore cellular frequencies to this scanner? When did they change the design (was it recently enought that if I look around I might be able to find one that still has the old design)?

Thanks very much in advance for any help or advice. This is my first scanner and I don't know a whole lot, so any help would really be appreciated.

I have had an AR-1000XLT as my main handheld for about 6 months, and like its wide-band coverage with no gaps. However, every other scanner I own or operate (at work) is a Radio Shack and RS programming and operation is ALOT more intuitive than the AOR's (and since the AOR is the odd one out, I guess I am just more partial to the Radio Shack Logic).

To do some of the simplest things I have to whip out a manual, where on the RS scanners, I can operate any of them just off the top of my head. I used a reducing copying machine to make a pocket-sized version of the AR-1000XLT's operators manual so I can have access to it when I need it.

Outside of that, I have had no complaints with its performance or features.

While it may only be an interesting coincidence, I have a similar problem with
my AOR1000XLT. I had to modifiy it to allow me to do a "hard" reset to the
CPU, but all my functionality came back and the scanner is flawless now.

Perhaps a reset might help you? Can't tell you anything about your model, but
it might be worth a look.

Existing laws have failed to stop police corruption for the same reason that existing laws have failed to stop crime.

For every hour you spend listening to the unimportant routine local ramblings of the police etc you are not spending an hour trying to ACTIVELY (publically, drumming up support, for REAL issues, national ones, the big fish) change and improve things on the important levels.

I bet politicians just love it when the gullible public they so despise is so easily diverted towards all these little unimportant local issues. Then they have a field day with us.

It's a great tactic (and, by the way, the Republicans are easily the best at this), hit people with outrageous laws they MUST fight (for dignity, Religon, medical care, etc) then really do a number on them with the important stuff.

>made no mods to my scanner and have had the same results in three
>different cities.

You are hearing IMAGES of cellular phones. 894 Mhz is about where the real
cellular band ends. I don't know what the IF frequency of your model is, but
I would be willing to bet that it is 10.7 or 10.8 Mhz. Take the frequency you
receive the calls on and subtract your IF frequency x 2.

915 subtract (2 x 10.8) would be :

915 - 21.6 = 893.4 Mhz, right near the top of the "real" band.

Since you are picking up images and not the root transmission, the scanner's
sensitivity for these signals will probably not be very good, but adequate for
strong local cell sites.

>I been trying to find a directional antenna that would point or
>isolate a particular signa or channel, do you think this is possible.

>Teel
>

I have seen and used a Ramsey Inverter with a Radio Shack Pro-2006 for test purposes. The Radio Shack Pro 2006 has a tape out jack, and we used that as the source of scanner audio to the inverter. The output of the inverter was

then fed to a stereo system so we could listen to it (it could also go to a recorder).

The Ramsey is only effective on simple inversion schemes, and is tantalizingly close to working well enough on simple fixed split-band inversion systems, but not quite.

Unless you are tracking scrambled signals that are using simple fixed single band inverters, then it is just a toy without much use (except as a BFO, maybe).

Source record: 243866

Hi all,

If you're a scanning enthusiast living in or, perhaps planning
on travelling through the North Central Florida area -- especially
the Gainesville/Alachua County, Fla. area, stop by my web page...

Todd Sherman's North Central Fla. Area Scanning Page

http://www.afn.org/~afn09444/scanner/

My site includes:

For the Gainesville/Alachua County, Florida area:

* Local and Surrounding Area Frequency Lists -

o Sorted by frequency
o Sorted by callsign
o Alachua Co. Fire & Rescue (ACFR)
o Gainesville Fire & Rescue (GFR)
o Alachua Co. Sheriffs Office (ASO)
o Gainesville Police Department (GPD)
o Miscellaneous Agencies (UPD, RTS, etc.)
o North Florida Amateur Radio Repeater Frequencies

* Local City/County Codes/Signals/etc. -

o Ten-codes
o Dispatch signals
o Disposition codes
o Response Codes
o CAD Unit Radio Designators
o List of Old City/County Codes and Signals for reference

* Terms, Acronyms, Abbreviations Used

* Local Agency Zone Maps

Scanner Laws by State, where known or applicable (the actual
written laws, looked up and retranscribed by myself)

Pointers to Other Scanning-related Web Sites

Pointers to Local Emergency Services-related Web Pages

Scanning-related Mailing Lists

Access to Scanning-related Usenet Newsgroups

Other `Interesting' Sites

NOTE:

All of the information at the site is public domain. It is all
freely available info - freely, openly, legally and cooperatively
obtained.
This is not an `underground' nor is it an `illegal' site; so
please, if you list it, do not indicate it as such.
I would much rather have my page referred to as something like
perhaps: "Todd's Most Excellent Scanner Site", or even "Todd Really
Great Site in North Florida", or yet, "Wow! Check This Really Neat
Site Out!" Maybe even..."Cool, dude! Have yuh seen dis one?" ;-)
But I'll accept just "North Central Florida Area Site". :)

Distasteful, arrogant egotisms aside, please drop by and have a
look. Offer me your comments, critiques, suggestions, corrections,
etc. I welcome any and all input...HOPE for it, actually.
I'm usually pretty bored...sitting in front of the monitor with
PINE Mail pulled up and with my eyes wide open, sitting for hours
anxiously awaiting the wondrously large amounts of e-mail I know is
going to come...but never does -- only to realize...I forgot to send
out that darned flyer to the newsgroups. 8-)

73,

QUOTING: Vubs79a@prodigy.com to All
MSG OF: 12-25-95 18:13
SUBJECT: Kentucky Scanner Laws

Vu> I was browsing through the radio books yesterday at Barnes & Noble and
Vu> i came across a very interesting book on scanners. I forget the name
Vu> of the book, but it contained a section on legislation regarding
Vu> scanning... both federal and at the state level. It noted that
Vu> Kentucky recently enacted the nation's most sweeping anti-scanner law.
Vu> According to this book, mere POSSESSION of a scanner is illegal in
Vu> Kentucky...even if the scanner is being stored for transport in the
Vu> trunk of a vehicle. It also stated that amateur radio operators are
Vu> NOT exempt from the law.
Vu> It seems there would be several constitutional challenges to this law,
Vu> not the least of which would be the illegality of possessing a
Vu> scanner, inoperable, in the trunk of one's car while traveling through
Vu> Kentucky. Would this not be a clear violation of interstate commerce
Vu> provisions of the U.S. Constitution?

No book is better than the actual law book itself.

Stop by your local library (or, better yet, if there is a University or College near you, stop by their Law Library) and find the books entitled: OKLAHOMA STATUTES. Find the 1995 Supplement volume, too (if one exists - can't remember), and look for updates to the law.

Failing that, see if they have WEST'S OKLAHOMA STATUTES ANNOTATED (O.S.A.) 1994 (which is actually much better I think, because of the detailed explanations of the law and how it came to be). Open to the back of the book and look in the supplement for any possible updates to the law, too.

The section/cite you want is "21 s.1214", I believe.

When looking through the indexes of state code/statute books, don't try (usually) using keywords such as "scanners". You won't find it. Look for chapter headings with the words "communications" and/or "radio" in them.

Todd

Or you might try the SoundFeeder SF100 ($19.95 at Best Buy) that
is made to play portable CD players through car FM radios. It plugs in
to the cigarette lighter, plugs into the portable scanner ear phone
jack, and has output plugs that can supply up to 9v to power your
scanner also. It puts out a tunable FM signal to your car radio, with
no direct connection to the car radio itself.

4534. D.C. Scanner/RADAR-detector Laws

Newsgroup: rec.radio.scanner
Date: 1995-12-29 00:00:00 UTC
From: "Todd L. Sherman" <afn09444@afn.org>
Message-ID: <Pine.A32.3.91.951229000212.20790C-100000@freenet3.freenet.ufl.edu>
Source record: 243869

Does anyone in the Washington, D.C. area know for sure that there is a scanner and/or radar-detector law there? I've had a look through the D.C. Code and could find no references to either myself. This does not mean that there is no such law, it probably just means I couldn't figure out the proper keywords to use in looking them up, and/or, I was just having a hard time understanding the thinking of the DC Legislators when it comes to properly indexing things. (Probably the latter, I'll give myself SOME credit. 8-))

If such laws exist, could you please give me a cite so that I can go back to the UF Law Library and look it up myself, and make a photocopy, so that I can transcribe it to ASCII and post it at my site? (I know, I know...long sentences like this are a no-no.) :)

I'd appreciate any help.

Thanks much beforehand...

Source record: 243872

My apologies. Here you asked for info on the KENTUCKY scanner law
and for some reason I gave you information regarding the OKLAHOMA scanner
law.

I accept any rebukings you may wish to send my way with my head bowed
in stupid realization that I...must have been floating in la-la land or
something. 8-(

`Baldwin's Kentucky Revised Statutes Annotated' is the book you want to
look for. And as before, look in the back cover for that Supplement for
any updates of the law.

I have the law posted at my site and, there is a specific exemption down
there near the bottom for any amateur radio operators, such:

[...]
(4) Nothing contained in this section shall prohibit the possession of a
radio by:
[...]
(c) ...a person holding a valid license issued by the Federal
Communications Commission in the amateur radio service;...
[...]

Hope this helps you. :)

73,

Todd

:Oh no! More scanner police... That's funny, I thought the scanner was
:just fine... Much more sensitive than my realistic handheld scanner....
:The only problem with it was that it seemed to go crazy near a
:computer, and I just got bored with it.

I was not trying to cause trouble. However, I bought one myself via
mail and I was disgusted with the receiver performance. It simply
would not scan some frequencies because of signals from other frequencies.
Although I was impressed with the size and frequency coverage I could
not accept the receiver performance so I sold it and bought a better
scanner.

I wondered if mine was faulty so I asked in alt.radio.scanner for opinions
on it. The replies I got backed up what I found. Several people indicated
to me that they had theirs only a short time before selling.

Also, why would you want to swap for a scanner with less channels and
coverage? Because the 2006 has a superb receiver?

Barry

Depends on what type of "straight fiberglass" type of antenna.
Discone has the advantage of being broadband - it's effectiveness is
equal across a wide band of frequencies. The gain of a discone is
nothing to get excited about but it does work for the masses.

You have to be more specific about which fiberglass antenna you mean.
The one I like is a Station Master which provides gain and only works
well at a single frequency, well a very limited range of frequencies
(e.g. not good for scanner applications). It also survives 100 + mph
hurricanes.

I would think there's a lot that someone could do about it. Where does a state legislature get the authority to ban outright the possession of a radio receiver? This is the kind of stuff that Hitler and Stalin did 50 years ago!

Plus, as I mentioned in an earlier post, if the law does indeed extend to inoperable scanners that are stowed in a trunk or other luggage compartment, this would appear to violate the interstate commerce provisions of the US Constitution...at least when applied to non-residents who are traveling through Kentucky enroute to somewhere else.

Steve,

So...how does one go about determining the date code? Is it in an easilly accessable place (on the box would be great!), or do you have to open up the radio?

At the current blow-out price of $139, this is a steal. I want to pick up one to have for a spare or maybe put in the girlfriend's car (so I can scan when I use her truck <g>), but I want to make sure I get a "capable" one.

-Drew in Charlotte-

(Of course, even if I DID have a cellular-capable scanner, I would never think of listening because that would violate the ECPA of 1986. I just want the capability in case I ever drive to Canada.)

It seems to me that current laws making it a felony to use a scanner during the commission of a crime are more than sufficent , and I would point out that there is no reason for any officer to fear having the average law abiding citizen hear these radios. Unless, of course, the officers were doing something they shouldn't. Remember the importance of the radio traffic in the Rodney King case?

Also, I know of at least one department that has gone to a DES system that allows journalists to purchase receive only units to monitor everyday traffic.

From: kramersj@aol.com
Message-ID: <4c38m9$ptk@newsbf02.news.aol.com>
Source record: 243740

I will assume that you are using an R-7000 Receiver.The CI-V Interface Hardware is Just an Rs-232 to 5 Volt Level shifter. I built mine using A 232 to 5 receiver/Drivers from Jap-Shack. MC-1488 and MC-1489 HOWEVER these chips need (3) regulated DC supplys +12, -12, and +5.

Transmit Data and Receive Data are tied together at the 5 volts level side and connected to the ICOM CI-V You will need to get a copy of the protocol. I got mine from ICOM (FREE), and I didn't have to buy the interface. I couldn't use it anyway.

MAXIM has a number of 5 Volt only chips that are multi Channel Receiver/Drivers.They are numbered from MAX-220 to MAX-249. This is what ICOM uses in their device The ICOM Interface allows for the use of more than one radio on a kind of "Serial Bus"(if you will.) The protocol handles Data Crash detection and has a specific address for each radio made R-7000 etc. I have just ONE radio and suspect that MOST PEOPLE have only one radio. (don't forget R-7000's are $1500 used.)

What the interface DOES NOT HAVE is a way to detect squelch break. I used the RS-232 "BELL" line and the RECORDER REMOTE reed relay output. The reed relay is fast enough. You will notice that at 10 Kbaud you can scan 15 channels/sec! Faster than you could get by tweeking the scan oscillator before the microcontroller starts rejecting requests. You can now go about 50% faster with a PC and the interface but faster than this, the PLL can't keep up. I wrote my code using Borland C but you could use anything. I have begun to rewrite using VISUAL BASIC. I have one good trick up my sleeve that allows me to scan real smart. But I could never have done it without the interface. Just build this simple interface, write some C code to change the memory channel and you're on your way!

I have found that I am mostly interested in Military Air VHF/UHF (118-149) Mhz / (225-400) Mhz and also INMARSAT comms around 1535 Mhz using a 4.5 foot parabolic. The CI-V works great on these higher Freqs because the interface generates RFI if you don't shield and bypass good. There are other things you could do that the R-7000 doesn't. If you need some motivation, think of this...you could scan around 825-845 and hear Cell phones directly from the handset. Have your PC add 45Mhz and monitor this! Store the Freq when the conversation ends and automatically search some more! It wouldn't take long to write since you won't need any user interface code. This is one crude brute force way to get the local freqs used. Of course I wouldn't know, since the Telecomunications Industry got 'our' congress to make this illegal! Obviously, It's cheaper to buy congress than to design and build a secure phone system. Why didn't they include the 49 Mhz phones also? (The reason is obvious). These laws are only a short term solution and the telecommunications industry knows this

also. Anyway this is another subject.

Hope this answers your questions,
KramerSJ@AOL.COM

The MUF must be just below 6 meters because 50 Mhz is deader 'n a fart...I hear alot of clutter at 42-45 and some of the SC HP on 42.5 and 42.34 from SE Mass. If anyone spots any 50.110 activity give me a yell!

I've lived in Ky all my life and can tell you they are more than 50
years behind the times. Can you believe that a proposal was made a
couple of years ago to make cock fighting legal again. It almost
passed. Forget anything modern like radios.

>Plus, as I mentioned in an earlier post, if the law does indeed extend to

That part I still don't know about. Considering that the book you
mentioned was wrong about hams being exempt they could be wrong about
that too. If I can find reliable information I'll let you know.

It's out now, but it's called " Police Call Plus and Beyond "
They combined Police call and Beyond Police call into 1 book.
It's about $12 - $15

Looking to sell my mint condition AOR8000, with Optoelectronics 12CXR interface and Scancat Gold software. Comes with Diamond RH77CA antenna, leather case, four Radio Shack ni-cad batteries and manual.

Features include:

1000 channels (20 banks of 50 channels each)
500 kHz to 1900 MHz (no gaps)
AM, NFM, WFM, USB, LSB, CW
Scout modification
and lots more

Paid about $900 for all of this stuff about six months ago. Will sell for $650 plus shipping.

Also willing to trade for a mint Radio Shack PRO2006 or PRO2035 with Optoelectronics interface. Willing to consider other computer-controlled scanning alternatives.

Reply by email to michael@alexander.terranet.com. Thanks.

Radio Shack has a great buy on the 2026 mobile scanner... I would like to know if this model can be unblocked for cell coverage? The older models were no problem. Even though this scanner is cell blocked, you can still pickup cell calls below and above the cell frequencies - this is called mirroring - which I cannot explain what that means but that is how they describe the scanners ability to pickup cellular sites outside the normal frequency range.
.
Anyone know of any mods? email to tomg@ramlink.net

The scanner is on sale now for $139.00, 100 channel

: >Henny
: >
: Certainly sounds like your hand-held is an amateur-radio (ham) vhf
: transceiver; the keypad is for entering the frequencies/channels and for
: DTMF (touch-tone) applications on repeaters; this radio requires the
: posssion of a ham-radio operators license to both own and use, so in fact
: just being in mere possesion is an FCC offense; despite that, so long as you
: don't interfere or transmit on amateur or commercial frequencies I doubt
: you'll run into any problems, and you could use the radio as a receiver on
: these bands with relatively little fear of prosecution; if you have no use
: for it you might try posting a "for sale" in the amateur radio newsgroups -
: of which there are plenty, even one solely dedicated to selling used
: equipment. Of course you will need to provide at least a make and model
: number in your post, and if you have no idea of the going price, which
: would also depend on the condition of the radio, you should be able to rely
: on the ethics of the ham-radio community to make you a decent offer.

God leave it to a ham to on and on. Henny, what is the model number of the
radio? If it displays the channal number only, and no frequency info, it
may be a U16. If so, E-Mail me I need one.

: : hard time..and i know when a flight will be delayed..etc..In the US this is
: : never a problem..may be a problem if you travel abroad though. JOHN

Damn John, your lucky your plane did not crash. There are several valid
reasons why they ask you not to use your radio. Lucky I was not on the
flight and cought you. I would insist that charges be brought aginst you.
Do you know what a xtal occilator is? Do you know what 'fly-by-wire' is?
If you knew the details, you would not be so quick to break out that radio.

: Having just gone to San Diego and back on two different airlines (United
: and TWA), both airlines made announcements that devices that transmit or
: receive signals are not allowed at any time. They specified AM/FM
: radios, I think one of them mentioned two-way radio, but neither
: mentioned scanners specifically. But since a scanner operates by
: receiving signals, it would fall under that restriction.

: Then again, after lurking here for a while, it seems to me that a large
: portion of scanner enthusiasts have the opinion of "as long as they don't
: catch me, it's okay, besides, if they didn't want me listening, they
: should keep their airwaves off my property." I'm not saying ALL, by any
: means, but there seem to be a awful lot of them...

: Just an observation from the other side of the fence.

: Tirya

Very well written Tirya. If they only knew how much damage they where doing
to the hobby, they would maybe come around. As I said before, there are some
very good reasons why they ask that radios not be used during flight or
preflight checks. Flying on the airlines is scary enough, with poor upkeep,
pilot errors, and ground crews that are common theives. Now some dumb ass
thinks that he is god, is going to turn on a source of RF interferance just
because he wants too. Lets face it, airlines are out for money, schedules
must be kept. So a member of the ground crew dose a "ramp patch" on a
system and tapes the wires outside the sheild. Not only dose the aircrafts
own systems provide interferance with the signals, but so dose everything
on board. Don't think this happens? Then one needs to wake up and smell
the money.

I was leaving DFW xmas of 94 to come home. I was watching the crew work on
the aircraft from the window, and yes monitoring them on the scanner. The

left engin was low on oil, the ground crew found the leak, but did not take the aircraft out of service for repairs. What they did was 'overservice' the oil in the engin to compensate for the leak. When we landed at LAX, I decided to follow up. Monitoring the scanner, I found out that yes the engin was low on oil again. Smell that money. The same thing happens with the onboard computer systems.

I blame 50% on the airlines for being money hungry, and 50% on scanner geeks for just being geeks. The only issue that we have been talking about here is safty. As far as the geeks go, stop thinking of your own pleasures and remember that you are not the only ones on the flight.

How long is this sale going on? I am attempting to find out where the date code is located (on the box or on the actual radio) and what the cut-off date is.

If modifiable for full 800Mhz, this is a steal!

> really not that importent.......

So why do the companies tout the system as scanner proof? Half of Portland PD mistakenly believes they cannot be picked up by a scanner. Why does portland tie up 3 channels with WX broadcasts? Why don't agenies give out codes so scanners can follow systems. Why don't the manufacturers make digital scanners?

4576. Rs Discone antenna - help

Newsgroup: rec.radio.scanner
Date: 1995-12-30 00:00:00 UTC
From: n0nas@hamlink.mn.org
Message-ID: <820332280.AA04764@hamlink.mn.org>
Source record: 243761

SN>From: Jason Piush <snp346@freenet.mb.ca>
SN>Santa was GREAT to me this year. I found a discone scanner antenna in my
SN>stocking (the Rat Shack one).
SN>Does anyone have any info on this antenna? What cable should I use to
SN>connect this antenna to my scanner? Is there anyway to improve the
SN>preformance? ect. ect.

Hi Jason.
The keys to making any antenna work are mount it as high as possible, use as heavy a coax as you can afford, and keep the cable as short as possible. In terms of what is available at Radio Shack, RG-8AU would be best, followed by RG-8X, then RG-6, and finally RG-58. With RG-58 limit yourself to no more than 25 feet, with RG-6 or RG-8X try 50 foot less, and for RG-8AU no more than 100 feet. These numbers are pretty much pulled out of the air but do have some relation to how "lossy" the different cables are. (Radio Shack is convenient but the quality of their cable isn't the best. The less insulation you can see thru holes in the braid, the better the cable.) If you use too much lossy cable you may find your scanner works better in the basement with the built-in antenna than it does with the new outside antenna.

If you don't want to limit yourself to Radio Shack, the next step up is the "9913 equiv" cables and different types of hardline. One of the cheapest high quality cables you can find is short (100' to 300') pieces of 75 ohm cable TV aluminum hardline. This stuff is often available free or at scrap prices from your local cable TV company. The hard part is making some sort of connectors for the cable because you can't afford to buy them. It's also hard to work with, sort of like a frozen garden hose or flexible copper pipe.

As for performance, a discone antenna is a "gain of one" antenna. It's claim to fame is the b-r-o-a-d frequency range it covers. However, the Radio Shack antenna is only rated for aircraft band and up. If you want to improve operation below 120 MHz, the general method is to add a vertical whip to the top of the "disc" section of the antenna. A 5' to 8' whip will improve operation down towards 30 MHz but might be hard to attach. Mount it on a 5' or 10' mast and it becomes more of a dipole at the lower frequencies. I consider a discone to be one of the most versatile antennas you could have. Other antennas have more gain but are also limited in frequency coverage.

Have fun!

I've been using and am real happy with Icom's discone antenna.

In addition to using it as a scanning/receive antenna, I've enjoyed real
success with it as 2 metre, 20 cm and 6 metre transmit antenna.

4578. BC200XLT battery mod question.

Newsgroup: rec.radio.scanner
Date: 1995-12-30 00:00:00 UTC
From: Brian varine <varine@ece.orst.edu>
Message-ID: <Pine.HPP.3.91.951230185721.11840C-100000@holmes.ece.orst.edu>
Source record: 243763

Does any one have any hints on cutting out the low battery circuit on the
200XLT? I have the mod but it doesn't explain where the diode and stuff
are. I've looked for the diode on the cpu board and the receiver board
and I cannot find the diode numbered. I've seen a few others but not the
one listed in the mod.

From: sonp@ix.netcom.com
Message-ID: <4c4tok$dh2@ixnews2.ix.netcom.com>
Source record: 243764

I have a BC860XLT which I dearly love but some of the 800 band is missing which is the cell phone area (I assume). Also some of the 900 area.

If this is true could someone please advise me of the necessary mod to regain the necessary frequencies?

I have yet to see a listing of just exactly where the cellular bands are so am not sure of what I am missing.

4580. Need schematic for Bearcat III

Newsgroup: rec.radio.scanner
Date: 1995-12-30 00:00:00 UTC
From: cpl@kaiwan009.kaiwan.com
Message-ID: <4c58rb$4tk@kaiwan009.kaiwan.com>
Source record: 243765

I have purchased an old Bearcat III (circa 1971). It is identical to the one pictured on the cover of the 1996 Scanner Master catalog, left side, sitting on the Bearcat IV.

I need a schematic for this radio, especially the pin assigments for the power connector on the back panel. It has 4 flat prongs arranged in a square pattern. The two on the left are positioned vertically, while the two on the right are positioned horizontally, like this:

| --

| --

The label on the back says it will accept either 13.8v DC or 117v AC, but I have no idea which set(s) of prongs accept either power source.

If you have a schematic for this radio and would be willing to either FAX a copy of it to me, or mail a copy, please respond directly via email.

Even if you do not have a schematic but know the pin assignments for the power connector please email them.

Thanks,
Perry Locke

If the jumper isn't there, I would be willing to bet your date code is newer
than 4A4 (month - A - Year). I just got several Pro-2026 units with date
codes of 11A3 (Novemebr 1993) and L201 is present in the board, and the units
are restorable. The code in the CPU is changed in units manufactured after
April 1994 (4A4), so it isn't there to restore.

Unfortunately, you'll get about 1 hr per set of NiCads per charge (assuming that you stay with the same size batteries [AA's in this case]). I would give serious thought to using an external C or D size battery pack.

There is another problem - the set may not work well (or at all) on NiCads. You lose 0.3V per cell in the switch from disposable cells to NiCads. For 6 cells, that works out to 1.8V or a bit more than an additional NiCad cell. Find a friend with an adjustable power supply and check out how well the set works on 6.5V - 7.2V instead of the 8-9 volts from the disposable cells.

Another option that may work for you - disposable rechargable cells. You'll get about 25 cycles from each set, but you'll get the full voltage of regular disposables. I don't think that you'll get more than 1 hour from them, but I'm not sure about that.

>better!

The nice thing is that we can still hear all the sides of the issue.

It seems to me that both camps (encrypt-digital vs free-monitor) have valid points and some shaky arguments also.

One twist I thought about regarding emergencies - with encryption, now the hams have a communications handicap. Is the city going to give all the hams (who would previously listened with scanners) digital decryption radios when an emergency strikes? This could be taken as "protecting one's turf" by public employees eager for overtime, or recognition as volunteers are more excluded from significant contribution by this handicap.

>I speculate that "Keith" was just venting. I do imagine that he, like so
>many other dedicated Radio Amateurs, will rise to the occasion when

Let's all hope so. But some will lose interest in the hobby as a whole, with more exclusions and rules, and that could be a loss to us also.

4600. Re: Boycott digitial encrypted Police!

Newsgroup: rec.radio.scanner
Date: 1995-12-30 00:00:00 UTC
From: drice@enuxsa.eas.asu.edu
Message-ID: <DKDsED.8CK@ennews.eas.asu.edu>
Source record: 243819

I think digital radio systems will be a very interesting test of whether or not "new-fangled" technology (i.e. trunked, digital, etc.) is being used as an anti-scanner ploy.

Let's remember that Project 25 digital transmissions in and of themselves are NOT scrambled. Let's also remember that Project 25 technology will be licensed to many different companies. This is different from most trunking systems, which are proprietary.

When cities go digital, today's scanners are pretty much useless. However, there is technically nothing stopping any scanner manufacturer from licensing the technology and building a Project 25 (digital) scanner.

Let's think about the possible alternatives, and what they might mean:

1) Scanner companies are permitted to license digital radio technology. They build digital scanners. Most radio traffic is transmitted a non-encrypted digital format.

2) Scanner companies are permitted to license digital radio technology. They build digital scanners. Most radio traffic is transmitted using digital encryption schemes.

3) Scanner companies are not permitted to license digital radio technology. No digital scanners are built. Most radio traffic is transmitted in a non-encrypted digital format, yet the cities consider it to be secure because no scanner on the market can receive it.

Here is my intepretation of each alternative:

1) Wonderful. Scanner listening goes on, albiet a bit more expensively. More traffic is encrypted than was in the analog days, but most PD/FD traffic remains in the clear. I would be perfectly happy with this. It is perfectly reasonable to encrypt some traffic (mainly PD type traffic, but there are surely other examplees). I think it would show that digital was truly being implemented as a technological breakthrough, and not as an anti-scanner tool. (I hate to admit it, but those Project 25 radio systems have some REALLY neat features!)

2) Some cities will probably follow this philosophy. As I understand it, encryption under Project 25 is almost as easy as just flicking a switch. I suppose this will happen in some places whether digital scanners ever come out or not. I do believe, however, that the fact that digital scanners were allowed to be made would show again that digital was being looked upon as a technical breakthrough and not as an anti-scanner scheme.

3) Unfortunately, this is the most likely outcome. This will, in my mind, show that digital, like trunking, is being used as a means to try to thwart reception of radio transmissions without actually encrypting said transmissions. The unwillingness of the radio companies to allow the manufacture of scanners capable of recieving non-encrypted digital transmissions would also show that those companies knew that their systems were being used as anti-scanner devices, whether or not the company officially claimed the system was scanner-proof.

I would be intersted in hearing other people's views on these possible situations.

Source record: 243821

A RTTY/CW transmit and receive circuit schematic
is included in the HAMCOMM software program
(latest version unknown). This file should be
ftp'able from many sites as it quite popular. The
basic receive interface consists of a single
op-amp, powered by the computers RS232 SERIAL
port, to provide the +/-12 volts DC required. The
op-amp operates as a simple zero crossing
detector. It works very good on both modes with
a GOOD, STABLE SSB/CW receiver. HAMCOMM was
written by a German ham.

With the use of other programs, this same op-amp
interface can be used for WEFAX weather map
reception, Slow scan TV, and packet reception.

The packet reception program (I forget the name
right now as it is on my other machine) was
written by a Polish Ham: Pawel Jalocha. Since it
only receives packet you will see all the packet
INFO frames as well as other handshaking frames
(SABM, UA, UI..etc) of ALL the folks on the same
frequency. Your screen will be very BUSY! I think
it is simply called PACKET.

There are also programs written for the SOUND
BLASTER card for all of these modes including
COLR SSTV, I haven't kept up on all of the names
however..Good Luck

> bit expensive for multiple runs that I need to make at a new installation.

Unless you plan to transmit on the antennas the cable does not have much to with receive other than attenuation. I would make sure the cable in question has low loss at the frequency
band of interest. Belden 9913 is indeed a bit pricey for multi-runs, but a good quality 75 ohm
cable with a low dB loss will work just as well, unless you are trying to get the most possible signal
to the scanner. I think the only improvement would be in the weakest of signals, in that case it
might be better to install a pre-amp at the antenna to increase the signal level.

Good luck,

I wonder if there is more than one version 890xlt out there? I've had mine over 18 months now and love it. It overloads easily with an external antenna but works great with the stock whip. It performs like a dual conversion scanner, but the bells and whistles make up for it. The auto search/store is a fantastic feature.

I live 20 miles north of Baltimore in the northern suburbs. Lots of pager sites around. I have no complaints at all about this scanner.

4608. Re^2: Frankfurt frequencies

Newsgroup: rec.radio.scanner
Date: 1995-12-30 00:00:00 UTC
From: Wolfram_Lewe@lippebox.owl.de
Message-ID: <MSGID_2=3A243=2F6301.216_bfec1d3f@fidonet.org>
Source record: 243827

Here are the frequencies for Frankfurt/Rhein-Main

ATIS 118,025
FIS 119,150
RADAR 124,425
125,400 and some more
Arrival 120,800
APP/Rad 118,500
Director 124,200
Tower 119,900
124,850
127,275
Ground 121,900
Apron 121,700
122,050

I hope all the frequencies are still up to date. In Germany you can buy a book called Fliegertaschenkalender ISBN 3-921270-06-5
which is issued every year. It costs about 30 DM and shows the frequencies of all airfields in Germany plus maps/approach charts of all major airports.

Enjoy your stay at Frankfurt,

Bye, Wolfram

The Governor of the state of Minnesota has just given his support to have the entire 7-county metro area (including Mpls/St. Paul) to go to a 800 Digital Trunked System.
1) We don't need it and its a totally waste of taxpayer money. Police already have the capability to talk to each other if they'd ever bother to use their "Common" channels they'd find out. They Refuse to in most cases because of management policy forbiding the use of those "Common" channels!
2) Its already been said and documented that the Minneapolis Fire Dept personnel would have problems communicating with crews working in a basement fire communicating with the truck just outside the structure! Lot of good the "Trunked" would do them. The current VHF system works just fine I might add.
3) The problem is TOO Much Transmitter Power from some of the VHF & UHF repeaters being used and thus "hogging" the same channel for other nearby communities. Nearby meaning 60 miles away!
4) But it will get rid of the scanner listeners...Yep, sure will. Will also stop other public safety agencies outside the Minneapolis/St. Paul area from listening in and assisting those metro agencies. Most Police vehicles currently have a scanner two-way radio in them and the officers would listen to surrounding areas for emergency calls coming into, or close to their town and offer assistance. Won't happen if one agency is on Digital 800 mHz Trunked and the other is on regular VHF or UHF. I once caught a rapist because of what I heard on my scanner! But you know...All those scanner listeners are more often than not "Criminals". Just ask Laura Quarantiello she'll tellya!

Not exactly true. Some years ago it was not allowed to sell scanners at all. Now you may sell scanners, but only if they can recieve radio or amateur frequencies. It is still forbidden to listen to any other frequencies except the radio oder amateur frequencies, but if you do so, there is not punishment. Ridiculous, isn't it?

Flip (Munich, Germany)

: : receiving signals, it would fall under that restriction.

Avionics have improved considerably over the years. If you can take a
scanner or hand held transceiver/VOR receiver with you on a 210 (Cessna 210)
and not have any problems..I don't see how it could cause problems on a a
jet aircraft that is many times the size of the Cessna. Anyway in the
Cessna or in a GA (General Aviation Aircraft), the scanner is much closer
to the avionics and instrumentation than it is in any jet aircraft.
No I don't monitor anyting that's in the AM 550-1600k or FM (88.0-136m)
while in an aircraft.
The scanner does make it easier to monitor approach..rather than
dialing in the frequency, I simply put the frequencies in sucessive
channels.I can easily monitor The tower and approach by using the plane
radios as well as the scanner. The scanner I have is very sensitive, It
sometimes even picks up computer processor noise, I have tested the
scanner by operating it in close proximity to another radio tuned to
wither VOR, ILS or ATC frequencies..no problem at all!

Ok, so I bit and bought the pro-2026 RadShack had on sale
'cause, you know, you could mod it ... heh-heh well, this
version had no jumper where there usta be a jumper that
you'd cut open..... so i took it back for a refund....

Weeeelll, there was a new salesperson there, a really
GOOD female-type salesperson who ended up selling me
the top-of-the-line pro-2035 scanner.

Which bring me to my problem! I NEED the CELL-MOD!!!!!!

P-L-E-A-S-E e-mail me the mod!!!!! Heeeeeeeeeeeeelp!
I don't think I have a chance in returning this one!

(Not if S-H-E-'S still there!)

Happy New Year!

.

It is the "Cadilac" of scanner radios. It is not even referred to as a "scanner", rather a communications receiver. Bar none, it's the best you can buy. I heard there's even a mod to restore the lost 800-900 Mhz band omitted at the factory. I would love to own one one day, but our budget doesn't allow for it. Average cost is $1800.00, though I think Grove is selling for $1300.00.

A friend has the 3000 and loves it. Very good performer, uses computer control & works quite well. He got his prior to the 800 Mhz ban, so I'm unaware of any restoration mod's for the blocked units. He uses a RS modified discone antenna on a 65' tower. (Modified: mobile CB antenna mounted vertically for improved coverage below 120 Mhz.) APR is just now releasing the AR5000 desktop comm receiver, most say, "Call for price", but I believe the price is around $2000.00. "Supposed" to outperform everything. I, however, can't see it topping, say, an Icom 7100.

You have 1 of the new "non-restorable" models. Cell is programmed out in the microprocessor. The only plus with the new model is the non-volitile memory chip; won't loose mem when power is disconnected. Also, the scanner only uses double-up conversion scheme, meaning there's lots of "image" reception from the 800Mhz band into the 900Mhz band. (Bleedover). You may be able to locate an older modifiable model somewhere, sometime. I've seen some in pawn shops. Normally, the date code is printed on a tag on the rear of the scanner. Good luck & have fun.

I just bought a radio shack Pro 2026. None of the buttons on the
>keypad work. I tried to reset the cpu per the instructions in the
>manual without any luck. Any help would be greatly appreciated.

When programming, do you press program 1st? Do you get the keypad "beep"
whenever you press any key? Have you tried any of the search modes? Does
it respond at all? If you're doing everything "by the book", and still
no response, then I'd return it for an exchange. I have a 2026 & never
had a problem.

: : : from the radio to your ear..and you're set...no one has ever given me a
: : : hard time..and i know when a flight will be delayed..etc..In the US this is
: : : never a problem..may be a problem if you travel abroad though. JOHN

: Damn John, your lucky your plane did not crash. There are several valid
: reasons why they ask you not to use your radio. Lucky I was not on the
: flight and cought you. I would insist that charges be brought aginst you.
: Do you know what a xtal occilator is? Do you know what 'fly-by-wire' is?
: If you knew the details, you would not be so quick to break out that radio.

: : Having just gone to San Diego and back on two different airlines (United
: : and TWA), both airlines made announcements that devices that transmit or
: : receive signals are not allowed at any time. They specified AM/FM
: : radios, I think one of them mentioned two-way radio, but neither
: : mentioned scanners specifically. But since a scanner operates by
: : receiving signals, it would fall under that restriction.

: : Then again, after lurking here for a while, it seems to me that a large
: : portion of scanner enthusiasts have the opinion of "as long as they don't
: : catch me, it's okay, besides, if they didn't want me listening, they
: : should keep their airwaves off my property." I'm not saying ALL, by any
: : means, but there seem to be a awful lot of them...

: : Just an observation from the other side of the fence.

: : Tirya

: Very well written Tirya. If they only knew how much damage they where doing
: to the hobby, they would maybe come around. As I said before, there are some
: very good reasons why they ask that radios not be used during flight or
: preflight checks. Flying on the airlines is scary enough, with poor upkeep,
: pilot errors, and ground crews that are common theives. Now some dumb ass
: thinks that he is god, is going to turn on a source of RF interferance just
: because he wants too. Lets face it, airlines are out for money, schedules
: must be kept. So a member of the ground crew dose a "ramp patch" on a
: system and tapes the wires outside the sheild. Not only dose the aircrafts
: own systems provide interferance with the signals, but so dose everything
: on board. Don't think this happens? Then one needs to wake up and smell
: the money.

: I was leaving DFW xmas of 94 to come home. I was watching the crew work on
: the aircraft from the window, and yes monitoring them on the scanner. The
: left engin was low on oil, the ground crew found the leak, but did not take
: the aircraft out of service for repairs. What they did was 'overservice' the
: oil in the engin to compensate for the leak. When we landed at LAX, I
: decided to follow up. Monitoring the scanner, I found out that yes the engin
: was low on oil again. Smell that money. The same thing happens with the
: onboard computer systems.

: I blame 50% on the airlines for being money hungry, and 50% on scanner geeks
: for just being geeks. The only issue that we have been talking about here
: is safty. As far as the geeks go, stop thinking of your own pleasures and
: remember that you are not the only ones on the flight.

While you folks are blaming the scanner owners, try to remember that on
many airlines now, THEY ALLOW PEOPLE TO LISTEN TO SCANNERS. IT'S IN
THEIR FLIGHT MAGAZINE!

If THEY don't have a problem with it, why do YOU?

What do you THINK I have been doing for this last year? What good did
it do? He's only escalated matters.

> If he wants to be an asshole (not saying he is), don't be one yourself.

There was a year's period where I wasn't ANYTHING on this forum. It
did no good. Well, the damned imbecile has been calling me out for a
year now, so here I am. Let it be just between HE and I and sit back
and see what happens. I am calling HIM out now. You let him do it
for a year. Let ME do it for a week or two.

> Frankly, this nonsense going back and forth between the two of you
> has nothing to do with scanning, so please take it elsewhere.

Oh, indeed it has EVERYTHING to do with scanning. You just don't know
it yet. It is hard to see beneath simple veneers in this virtual
medium, but it will come out in the wash, I assure you. Moss is on a
"mission", quite possibly at the behest or in company of others.
Scanning most assurredly is in the focus. It's just not up on the
table where it can be easily seen (yet).

Anyway.....YOU and the newsgroup permitted Moss to have his way with
me for the better part of a year. He had his fun, quite unchallenged
and unimpeded for a long time. NOW.....I am going to enjoy a piece of
his ass for a brief interval......far briefer than you think......but
I am going to have me some of him for a short while. I am
entitled...<grin>

Happy New Year!

Cool. Now the moral of it, then, might be that it didn't do any good.
As far as I am concerned, it is mandantory that something "good" be
done. I've had it with him and we're going to get down and dirty,
or up and clean....whichever way he wants it....but some of this shit
is going to stop......and I am committed for the duration until it
does STOP. A better word for my stance is.....RESOLUTE.

>I'm no supporter of yours and if Moss wants to call you a glue-sniffing,
>T-bird swillin' cheat, I could care one whit.

Until it gets down to the "cheat", I don't care either. I don't like
to be called "late for dinner". THAT pisses me off, for sure.
"Cheat" and "Dishonest" are also fighting words.........

> What I do care about is this constant bickering,

Constant? Whatthehell are you talking about? I just got here. Moss
has been running his own game for a year...and YOU take THAT up with
HIM. I've only been here for a few days, Michael.

> which does nothing more than clutter up the newsgroup
>with things that are not even remotely worthwhile reading. Yeah, yeah,
>yeah, I have the option of not reading yours (and his) posts, but I don't

>advance. Heck, who knows, one of you might surprise me and actually say
>something relevant! I also freely admit that you are both apparently more
>knowledgeable than me on this subject and I'm eager to learn.

That's idealogically nice. A bit utopian, but definitely nice.
However, it won't stay nice when I am continually accused of
dishonesty, and sinister motives. I possess a wealth of knowledge and
information on a wide spectrum of radio and am willing and capable of
sharing much of it on some sort of an equitable basis. This is to say
that I cannot dedicate my Life to radio; literally GIVE it all away;
and still eat, pay the rent, and educate the kids. Lines have to be
drawn as to what and how I do it, if I am to do anything at all. I
will choose those lines in my own way in my own time.

Some lines are totally FREE....like "which diodes do you clip in the PRO-2006 to restore cellular and speed up the scan rate?" The FREE answer is: D502 and D503. Other lines bear a cost, like, "How do I interface a computer to my PRO-2006?" ANS: Any of several ways, from roll-your-own projects given in my books, newsletter, and published articles, to one of three or more commercial products from Optoelectronics, COMMtronics Engineering, or Datametrics. The point here is simple.

If I "dabbled" in radio like Moss and many others do, the best I could offer, like them, would be a collection of half-assed, poorly written, "clip-a-diode" or "add-a-resistor" hacks to a few scanners. Yep, this kind of stuff is pure information and is freely disseminated. (You get what you pay for....) However, I do NOT "dabble" in radio. My Life is committed to it. Therefore, there has to be some way for me to eat, pay the rent, and educate the kids. My business, my vocation, and my hobby are one and the same......a very unique position. But my OUTPUT is unequalled by any in the field.

Yet, for over a year, Moss has been attacking me at all levels, including those that buy the groceries, pay the rent, and educate the kids. He has forced the issues and my hand. Let me repeat once again:

>> Nice idea, Michael. However, Moss has been attacking me and my
>> livelihood in this forum, literally unchallenged and unabated, for
>> over a year. I have kept my peace all the while. If you can think of
>> better ideas, by all means please advise me.

The point is, I kept my peace and stayed out of it. Nothing happened. He escalated matters, day by day and week by week. Then I began getting e-mails asking why was I "afraid to meet him in the public forums?" Well, I am NOT afraid....it was basically a respect for the newsgroup and its mission that kept me gritting my teeth in silence for this last year. But enough is enough. I am HERE to be counted now.....and it's as much on my terms as Moss's. I will NOT acquiesce to any other terms for the time being.

YOU and everyone else on the newsgroups had AMPLE opportunity to stick a sock in his mouth and "you" failed miserably. Meanwhile, the impact of his bullshit escalated to intolerable proportions as far as I am concerned.

>You want the guy to stop? Then stop rising to the bait. As long as he
>keeps snaring you with the same lure, he's going to keep doing it.

Where are you coming from? I kept my peace for a damned year, and he didn't stop........and no one else stopped him. In the final analysis, I guess it's up to me now. Well, I am here. I have been here for a few days at most. The opening shots had to be fired, and issues had to be raised and set into the clarity of print.

>it my estimation, makes you look as foolish as he.

Di d I look so "foolish" when I kept my peace over this last year?
Apparently some people thought so. Damned if I do, and damned if I
don't. So I choose now.......to do. Oh.....and I am NOT a
politician. The last thing on earth that I care about is how "I
look". If people make judgments on "how I look" especially in the
short term, then it is likely they and I do not step to the beat of
the same drummer anyway. I do not and will not play politics.
Haven't we had enough of THAT in Washington and in the state capitols?

> For my part, each and every time that Moss decides to wallow down
> in the dirt with his idiotic ramblings, I'll point it out to him that they are
> unwanted here. I'm sure everyone else will do the same.

"Everyone else" hasn't done it *yet*, Michael. There's no sign they
will start now. There has been AMPLE opportunity for "them" to start.
It ain't happened. Moss and his "mission" are running rampant.

Don't get me wrong....I am open to better ideas. But one way or
another, Mr. Moss is going to stop. It can be pleasantly or
unpleasantly, but he *IS* going to stop. When he does, then we can
get on with the pleasures, arts, and sciences of scanning. For that
matter, there's no disruption to that process anyway. This virtual
medium affords an infinite number of parallel paths and threads. One
does not impede another.

I should think my position is clear now. If not, please don't
hesitate to ask questions.

Happy New Year!

Bill

Personally, I don't care what either one has to say about the other. That has nothing to do with the purpose of this group. It's too bad that both have to use this newsgroup to air their personal differences. I imagine that many simply ignore any posts from either of them as I do. That's too bad, since when either has anything worthwhile and related to scanning to say, it too will probably be lost among the other BS.

For a long time up until about 10 years ago, we would receive a
transmission identifying itself as "range control" issuing coordinates
on a semi-regular basis. I dispatch Butler PD in northern New Jersey
which is a member of the 9 municipality North Jersey Police Radio
Association operating on 37.30 Mhz. We all had a terrible time with
this skip transmission as it would cut out our own local units.
This was until one of our local scanner fans went on a Canadian
vacation trip. He began receiving "range conrol" loud and clear one day
along with other units transmitting on 37.30. He found that it was from
Canadian military units conducting practice. Once he came back to town
and told us this information, one of our chief's contacted the Canadian
military about our problem. They very politely apologized and said they
would change their base station frequency.
We haven't heard "range control" since then.

: Damn John, your lucky your plane did not crash. There are several
valid
>: reasons why they ask you not to use your radio. Lucky I was not on
the
>: flight and cought you. I would insist that charges be brought aginst
you.

Yeah, right. And I'm sure your "insistence" would carry a lot of weight
with the airline.

If listening to a scanner on-board was so terribly "dangerous" then why
do SOME airlines specifically allow the practice? Bottom line: bring
your scanner, hide it under the newspaper when the flight attendant walks
by, and attatch your Walkman-type headphones. I've used this method
every time I've flown for the last 7 years, and it works quite nicely.

For Sale, Yaesu FRG-9600 UHF/VHF receiver, multi-mode, 60 to 905 Mhz continous. Has built in video board (all you need is a monitor and you can use as a TV) Also, have Yaesu FIF-232 computer interface, which is part of the deal. Original box, I think I have the manual but will have to look. Very good condition, no horrible scrathces, non-smoker.

Price is $500.00 firm no haggling, no offers. You pay for shipping depending on how you want to ship. Your money order will be in my hands before I ship. I will provide you with my life history before you send money. I am ham, NS5Z, up untill 6 months ago same call book address for 13 years but same city. I am State Parole Officier for 19 years. You can call directory assistance, verify my numbers and call my job. Whatever, I can do to give you piece of mind I will.

I bought one and it seems to work OK (GRE seems to make quality
equipment). I later got some modifiable scanners, so I don't use it
any more. Being worth the money depends on how much you want to
receive those fequencies. I think the GRE would be a better choise
than buying the cheaper Ramsey kit. Si B.

I'd suggest Scanner Journal the RCMA puts out also. I get both USSN and
SJ, they're great.

USSN has a lot of technical stuff that is useful
SJ has lots of area freqs.

SJ is at RCMAHQ@GEnie.geis.com they'll send you a info packet

DON'T GET POP COMM, it's boring as hell and has lots of shortwave stuff.

I used to think Bill Cheek was a respectable person (and I still do), but he has certainly shown another side of himself. I don't know the specifics of what Andy and Bill were discussing or disagreeing about, and I don't know much about what Andy has done or what he does for a living, but I have seen Bill's work over the past several years since getting involved in scanning, and I think he does a good job/service. But if he continues to bring himself down to a low level like he has, I'd be inclined to consider him with a lower level of credibility. C'mon, Bill, no matter who started it or what it's all about, it's not worth exposing yourself like this. There are many of us who still respect you.

If you live in an area covered by ScannerMaster books, the that will be your best bet. They cover DC, VA, FL, NY/NJ, PA, OH, IL, MA, and others. Of course they also publish Monitor America, for nationwide listings.

Call 800 722-6701 for a catalog and prices.

What have you got? Is it just the ham database or is it the license DB
for all radio users ie: Public safety, Commercial, public works, etc.

I downloaded a partial copy of one of those TAFL files to see what they
were, and it contains ALL the radio licenses for Canada. Commercial,
Public Works, etc. Exactly the sort of DB you'd want if you were a
scanner listener :>. This file contains most (all) data for the licensee:
Freq, Organization name and address, Transmitter location, power, antenna
pattern, etc. as well as the International co-ordination coding and other
assorted beaurocratic flotsam.

Put this DB on a CD and write a decent search engine for it and you'd
have a good disc.

> So am I. Have you seen the RAC pages? Very nice, indeed. Lots of
information.

Yeah I did find the RAC page. Good stuff, but I wish they had a band
plan available.

(Disclaimer--please pardon my 'newbieness')

I'm thinking of buying one mainly because I love watching COPS. :) Pretty shallow reason, I know, but I figure it would be kind of fun listening in on police frequencies. What else are they used for, and what should I expect to pay for a decent one?

Any help greatly appreciated, please e-mail if it's no trouble....Thanks!!
